TO: Department of Energy

Ref: Price Anderson Act Concerning The Continuation
Or Modification Of The Act

Gentle people:

This Act should not be renewed under no circumstances as long as the "Limit of Liability" clause is included.

For your information the nuclear industry in 1957, begged for a 10 year "moratorium" of liability stating that they (Nuclear Industry) would prove to Congress that they would not be back again for they would become a viable industry by that time.

As you know, 40 years has passed and "They" are no closer to becoming a viable industry today than they were 40 years ago.

To continue this Act is to continue flirtation with a totalitarian end result not unlike that of Nazi Germany and its flirtation combining the Krup industry (Nuclear Industry U.S.) The then Germany Democratic Legislative body (our Congress) and a dictator by attrition (yet to come to U.S.).

We ran "Isaiah" project out of Grays Harbor Washington (Home of Defunct WPPSS Projects #3 and #5) by presenting this concept to the city councils of Aberdeen, Hoquiam, Montesano, Elma and McCleary, Washington and they said "No way until you "Isaiah" see to it that the limit of liability be eliminated from "Price Anderson".
