1.0 Introduction

The U.S. Department of Energy (DOE) Office of Legacy Management (LM), established in 2003, manages DOE's responsibilities associated with the closure of World War II and Cold War era sites that the federal government operated to research, produce, and test nuclear weapons and conduct other scientific and engineering research.

The operations that were conducted in this vast network of industrial facilities left a legacy of radioactive and chemical waste, environmental contamination, and hazardous facilities and materials at well over 150 sites. Today, LM manages 103 of those sites. Since 1989, DOE has taken an aggressive accelerated cleanup approach to reduce risks, cut costs, and ensure the protection of human health and the environment. The establishment of LM is part of that approach.

At most DOE sites undergoing cleanup, some residual hazards will remain when cleanup is completed due to financial and technical impracticality. However, DOE still has an obligation to protect human health and the environment after cleanup is completed. Various DOE organizations have Long-Term Stewardship (LTS) responsibilities. Environmental Management (EM) performs LTS at remediated locations within larger active EM cleanup sites. The National Nuclear Security Administration (NNSA) performs LTS at remediated locations within larger active NNSA sites. LM performs LTS only at remediated sites that no longer have an active mission.

2.0 Purpose

The main purpose of the *Site Management Guide* is to be a reference document for LM and its contractor(s) and to provide accurate and consistent information across the LM organization. The LM *Site Management Guide* coordinator updates the guide annually. The primary data elements of the *Site Management Guide* are the following:

- Site Name and Location (State)
- Pre-LM Name
- Transferring Organization
- Actual Transfer Date (Fiscal Year [FY])
- Planned Transfer Date (FY)
- Regulatory Drivers and Programmatic Framework
- Site Category

The data elements listed above are under configuration control and cannot be altered without proper approvals. LM manages and controls all Site Management Guide changes except changes to data about the DOE Office of Environmental Management (EM) Closure Sites transferring to LM. Such changes require joint approval by EM and LM Directors.

3.0 Regulatory Drivers and Programmatic Framework

Regulatory drivers are statutes or programs that direct cleanup and management requirements at DOE sites. LM currently manages sites with diverse regulatory drivers or as part of internal DOE or congressionally recognized programs.

Regulatory drivers include the following:

- Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA)
- Resource Conservation and Recovery Act (RCRA)
- Uranium Mill Tailings Radiation Control Act (UMTRCA) Title I
- UMTRCA Title II
- Nuclear Waste Policy Act (NWPA) Section 151
- State Water Quality Standards

Additional sites were remediated, and LM manages them today under the following programmatic frameworks:

- The Formerly Utilized Sites Remedial Action Program (FUSRAP)
- The DOE Decontamination and Decommissioning (D&D) Program
- Plowshare/Vela Uniform/Weapons Related (PVW) Sites
- Manhattan Engineer District/Atomic Energy Commission (MED/AEC) Legacy Sites

CERCLA/RCRA sites were radiologically or chemically contaminated by federal uranium ore milling, processing, research, or weapons-manufacturing operations. Once remediation is completed, LM becomes responsible for long-term management. UMTRCA Title I sites are associated with former privately operated uranium ore-processing locations. The remediation of these sites created 19 disposal sites that contain encapsulated uranium mill tailings and associated contaminated materials. UMTRCA Title II sites formerly were commercially owned and are regulated under a U.S. Nuclear Regulatory Commission (NRC) license. For license termination, the owner must conduct an NRC-approved cleanup of any on-site radioactive waste remaining from former uranium ore-processing operations. The site owner must also provide funding to offset some of the costs of site transition to LM and post-transfer long-term surveillance and maintenance (LTS&M). One site was remediated under Section 151 of the Nuclear Waste Policy Act, which contains provisions for transferring privately owned disposal sites to the federal government if the site activities were conducted for the benefit of the government. NRC is the regulator for this site as well. Finally, LM manages one site that was remediated under State Water Quality Standards. Cleanup was regulated by the Colorado River Basin Regional Water Quality Control Board, a California state agency, under the Waste Discharge Requirements Order of 1989.

Programmatic framework sites include FUSRAP sites where the U.S. Army Corps of Engineers (USACE) is responsible for site surveys and remediation before they are eventually transferred to LM for post-closure care. FUSRAP was initiated in 1974 to identify, investigate, and clean up or control sites throughout the United States that were contaminated as a result of the nation's early atomic weapons and energy programs from MED/AEC operations. D&D sites were remediated under DOE orders or applicable environmental protection laws. They include experimental reactors or locations where nuclear energy research was carried out. The Plowshare/Vela Uniform/Weapons Related sites are locations in the continental United States where underground nuclear and nonnuclear tests were conducted or sites that were evaluated for such tests that are located off the Nevada National Security Site (formerly the Nevada Test Site). Many of the individual Plowshare/Vela Uniform/Weapons Related sites have been remediated by DOE under different frameworks, including federal facility agreements and consent orders and state partnerships such as voluntary cleanup programs. DOE maintains responsibility for any radioactive material that remains at these sites under the authority of the Atomic Energy Act of 1954. MED/AEC legacy sites are sites that

were associated with the program during World War II by the U.S. to produce the first nuclear weapons as well as AEC sites associated with early weapons development.

4.0 <u>Site Categories</u>

The long-term management of each LM site is designated as one of three categories based on the actual or anticipated LTS&M activities associated with that site. The site category indicates the level of LTS&M activities that are expected for each site:

- Category 1 activities typically include records-related activities and stakeholder support.
- Category 2 activities typically include routine inspections (site visits are conducted to verify the integrity of engineered or institutional barriers) and monitoring/maintenance, records-related activities, and stakeholder support.
- Category 3 activities typically include operation and maintenance of active remedial action systems, routine inspections (site visits are conducted to verify the integrity of engineered or institutional barriers) and monitoring/maintenance, records-related activities, and stakeholder support.

Note: For sites that have multiple categories, the overall category designation will always be the highest of all categories listed for that site. For example: The Salt Lake City, Utah, Disposal/Processing Site is currently counted as one site, but it has two category designations. The Salt Lake City, Utah, Processing Site (mill site) is a Category 1 site, and the Salt Lake City, Utah, Disposal Site is a Category 2 site. For reporting purposes, this site will have an overall category designation as a Category 2 site.

LM also maintains a Transitioning Sites category, which consists of sites that will transfer to LM within the next five years. LM always conducts site-specific activities to prepare a site for acceptance into the LM program. Although the date that a new site officially becomes LM's responsibility is important, LM is conducting due diligence by working on sites as much as five years ahead of transition dates. Important transition activities can include developing LTS&M plans, which, depending on the authorities under which the site has undergone remediation, may require approval by regulators such as NRC or the U.S. Environmental Protection Agency. Other transition responsibilities include identifying and preserving records, and ascertaining that real property instruments, such as administrative institutional controls, are in place. The designation of when transition activities begin at a site will help LM better align its budget formulation, life-cycle planning, and staffing with the beginning of actual work at future LM sites. As each site in the Transitioning Sites category is formally transferred to LM, it is officially designated as a Category 1, 2, or 3 site.

LM may, at times, engage in programs and projects on land they do not own. As a result, the location of these activities is not formally defined as an LM site or assigned an LTS&M category. Programmatically these activities may be treated in a manner that most closely resembles the LTS&M category definitions stated above.

5.0 Site Counts

The Site Management Guide is the control document for all site count information. The manner in which sites are counted is critical for ensuring that LM provides accurate and consistent site count

data. It has been determined that each geographic site location will be counted as one site. This includes geographic site locations having both a former processing site and an associated disposal site. These types of sites will also be counted as one site.

Note: The only exceptions to the site count guidance are two FUSRAP sites in Berkeley, Missouri (Berkeley Site and Berkeley Site Vicinity Properties), and the two FUSRAP sites in Niagara Falls, New York (Niagara Falls Storage Site and Niagara Falls Storage Site Vicinity Properties). These four FUSRAP sites are currently counted as four sites because USACE manages them as four separate sites.

The following are examples of UMTRCA sites that have both a former processing site and an associated disposal site:

- These two Gunnison, Colorado, sites count as one site:
 - 1) Gunnison, Colorado, Disposal Site
 - 2) Gunnison, Colorado, Processing Site
- These three Rifle, Colorado, sites count as one site:
 - 1) Rifle, Colorado, Processing (New) Site
 - 2) Rifle, Colorado, Processing (Old) Site
 - 3) Rifle, Colorado, Disposal Site

6.0 Site Nomenclature

The names of many sites that transfer to the LM program are confusing and non-descriptive. In many cases sites have names using the company name of the former site operator or using a geographic name or nickname. LM has established the following guidelines for naming or identifying sites within LM to eliminate confusion when trying to identify sites and site locations:

- Eliminate use of company names of current or former operators or property owners.
- When possible, name a site by using the name of the nearest city or town. If multiple sites exist near the same city or town, use a direction name (North, South, East, West) following the city or town name.

Note: LM will receive a few sites that do not have a city or town near the site to use as the site name. In these cases, the sites will retain the current pre-LM name. **Example:** There are no cities or towns near the Salmon, Mississippi, Site. "Salmon" is the name of the major test conducted at the site and is not referencing a geographic location; therefore, the Salmon, Mississippi, Site retains the pre-LM site name.

FUSRAP sites not yet transferred to LM retain their USACE name (as shown under the Pre-LM Name column in Appendix B). Upon transfer, site names will be changed in accordance with LM site nomenclature.

Be aware that LM has revised several site names for sites that have not yet transferred to LM (mainly associated with UMTRCA Title II sites) for internal management purposes. Until a site officially transfers to LM, the original (pre-LM) site name will be referenced in all outside reporting and data sharing. Appendixes A and B include pre-LM and LM site names for ease in cross-referencing.

- The name should also include the state in which the site is geographically located.
- When applicable the site name should include additional information about the site, such as processing, disposal, or decommissioned reactor. See Example:

Maybell, Colorado, Disposal Site Maybell West, Colorado, Disposal Site

7.0 Site Transition Policy

This section references the following site transition policy documents available at the following web address: http://energy.gov/lm/guidance-reports-and-documents

Terms and Conditions Between EM and LM – Policy Guidance Memorandum (January 2021): Resolution of New Cleanup or Repair Actions on Former Office of Environmental Management Sites in the Office of Legacy Management Portfolio.

Site Transition Plan Guidance – This document provides guidance for the development of site transition plans.

Records and Information Management Transition Guide – The *LM Records and Information Management Transition Guidance (November 2017)* document establishes a framework for developing a Records and Information Management Transition Plan as part of the overall transition effort for a legacy site.

Site Transition Framework – The *Site Transition Framework for Long-Term Surveillance and Maintenance* document provides a framework for all DOE facilities and sites where DOE may have anticipated LTS&M responsibilities.

Site Transition Process Upon Cleanup Completion – This two-page fact sheet outlines LM's policy on various aspects of site transition.

Site-Specific Fact Sheets – These fact sheets for sites that have transferred to LM cover the following topics: key milestones, site condition at the time of transfer, transition issues, and information about the management and mitigation of programmatic risk. Site-specific information is available from the respective LM site manager and at the following web address: http://energy.gov/lm/sites/lm-sites

8.0 Interrelationship of Site Management Guide Data

All LM federal and contractor staff should abide by the *Site Management Guide* because of the interrelationship and interdependency among site count data and other LM products, processes, and systems.

Looking at the LM program and the core functions of planning, budget formulation, budget execution, and evaluation, site count data is a major part of many products. The following are just a few of the products that require current and accurate site count data:

• LM Strategic Plan

- Budget Formulation
- Life-Cycle Planning
- Environmental Liability Estimates
- DOE Performance Measure Management System

LM staff should use the *Site Management Guide* as the source document when preparing or releasing site count information for DOE data calls or to transferring organizations. All changes or questions associated with the data in this guide should be addressed to the LM *Site Management Guide* coordinator.

9.0 Appendixes

Site Management Guide site data are presented in the following appendixes. In each appendix, changes from the previous update are shown in red font.

Appendix A-1 – Alphabetical Site Count Listing: This appendix lists the sites in the LM program alphabetically.

Appendix A-2 – Site Count Listing by Transfer Date: This appendix lists the sites in the LM program by fiscal year transfer date.

Appendix B – Site Transition Schedule: This appendix lists the sites that are scheduled to transfer to LM from FY 2026 through FY 2070.

Appendix C – Transitioning Sites Category: This appendix is a list of sites scheduled to transfer to LM within the next five years.

Appendix D – Planned Site Count by Year: This appendix shows the number of sites currently in the LM program combined with sites that are scheduled to transfer to LM over the next 10 years.

Appendix E – Site Count by State: This appendix is a table of sites currently in the LM program, listed by state and site category.

Appendix F – Site Count by Regulatory Driver/Programmatic Framework and Site Category: This appendix is a chart of sites currently in the LM program listed by Regulatory Driver/ Programmatic Framework and site category.

Appendix G – LM Site Maps: This appendix contains two maps, a map of sites currently in the LM program and a map of the anticipated sites through FY 2031.

Appendix H – Tribal Collaboration Sites: This appendix provides a summary and map of current LM sites and sites planned for transfer through FY 2031 that are located on or near tribal reservations where collaboration activities are performed.

Appendix I – Defense-Related Uranium Mines and Uranium Leasing Program Locations: This appendix provides a summary and map of Defense-Related Uranium Mines (DRUM) site counts by state and tribal reservation. The map also includes the location of lease tracts managed through the Uranium Leasing Program (ULP).

Appendix J – Site Information Summary: This appendix provides a summary of sites that are being managed under LTS&M. It consists of commonly used data points from the DOE Office of Legacy Management Site Overview report (number of wells, number of disposal cells, and institutional controls) and is grouped by Regulatory Driver/Programmatic Framework. The sites are counted as outlined in Section 5.0 above. The summary shows data for the prior year and the current year. Site-specific information supporting the summary is reviewed and updated annually by DOE and contractor site managers.

Appendix K – Status of Land Managed by Legacy Management: This appendix is a chart displaying acreage totals for non-DOE-owned sites/land with rights to conduct activities, DOE-owned (fee simple) land, and withdrawn land (for more information, see the DOE Office of Legacy Management Site Overview report).

Appendix L – Environmental Liabilities: This appendix is a summary of the 75-year constant dollar totals for LM sites and sites scheduled to transfer to LM.

Appendix M – Abbreviations: This appendix is a list of abbreviations used in the *Site Management Guide*.

Appendix A-1: Alphabetical Site Count Listing

Alphabetical Site Count Listing Through September 2025

	LM Site Name	Pre-LM Name ¹	Site Category	Regulatory Driver/ Programmatic Framework	Fiscal Year Transfer Date

Notes:

¹ The fee land and wells for Bear Creek, WY, Gas Hills North, WY, and Durita, CO, sites have transferred to DOE, but the Title II private license has not been terminated. These sites will formally transfer to DOE after NRC concurs that remedial action has been completed and accepts the site-specific long-term surveillance plan. After which, the sites will be administered under the NRC general license for long-term care.

² The DOE Office of Legacy Management is the owner of record at the following FUSRAP sites: Maywood, NJ and Niagara Falls Storage Site, NY. LM shall accept responsibility for all federally-owned real property and interests therein, acquired by USACE for FUSRAP execution at the time of site closeout (i.e., public declaration of completion). LTS&M responsibilities shall transfer to LM two years after site closeout. Fiscal year transition date to LM is triggered by the site closeout event. Vicinity properties at these sites are typically non-federally owned though the government may acquire real property interests to perform LTS&M responsibilities.

³Transfer of Church Rock to LM is pending long-term stewardship responsibility resolution and assignment by OMB. Date assumes that Northeast Church Rock hazardous mine waste is disposed on top of mill tailings disposal cell as proposed by US EPA and agreed by US NRC.

⁴Fiscal Years not listed do not have sites planned for transfer.

Uravan, CO, Disposal Site	2	UMTRCA Title II					X

Notes:

Includes sites planned for transfer to LM within the next five years.

Shading indicates fiscal years where numerous transition activities are occurring prior to site transfer, which are managed within the LM Site Transition Framework that establishes conditions for the following 10 areas: 1) Authorities and accountabilities are assigned and documented. 2) Site conditions are accurately and comprehensively documented.

- 3) Engineered controls, operation and maintenance requirements, and emergency/contingency planning are documented.
- 4) Institutional controls and enforcement authorities are identified. 5) Regulatory requirements and authorities are identified.
- 6) Long-term surveillance and maintenance budget, funding, and personnel requirements are identified. 7) Information and records management requirements are satisfied. 8) Public education, outreach, information and notice requirements are documented. 9) Natural, cultural, and historical resource management requirements are satisfied. 10) Business functions including contractor benefits are addressed.

As these sites officially transfer to LM, they will then be designated as a Category 1, 2, or 3 site based on expected LTS&M activities.

Notes:

Uranium Leasing Program lease tract locations are in the state of Colorado. There are no lease tracts on tribal reservation areas.

DRUM site counts will change as mines are reconciled as verification and validation activities are completed. Data as of 9/30/2025 from DRUM_GIS Database.

LM may become engaged in programs and projects on land they do not own. DRUM and ULP are an example. As a result, the location of these activities is not defined as an LM site or categorized. Programmatically these activities may be treated in a manner that most closely resembles the categorical definitions stated in this guide.

Appendix K: Status of Land Managed by Legacy Management

Sites With LTS&M Activities as of September 2025

DOE-Owned (Fee Simple)

Withdrawn (Includes 29,422 acres withdrawn for uranium/vanadium mineral development and mining, of which roughly 260 acres have been affected by DOE's mineral-leasing activities. The U.S. Bureau of Land Management manages all other surface uses of these lands.)

Non-DOE-Owned Site/Land with Rights to Conduct Activities (environmental monitoring, maintenance, inspections)

Notes

The fee land and wells for Bear Creek, WY, Gas Hills North, WY, and Durita, CO, sites have transferred to DOE, but the Title II private license has not been terminated. These sites are not yet under the DOE general license.

LM is the owner of record at the following FUSRAP sites: Maywood, NJ and Niagara Falls Storage Site, NY. The USACE is responsible for protectiveness at these sites until remedial action is completed and LM assumes LTS&M responsibility for the sites.

Appendix L: Environmental Liabilities

Environmental Liabilities as of 2024

Regulatory Driver/ Programmatic Framework	75-Year Constant Dollar Total (rounded to thous ands)
