A nighttime photograph of a city skyline reflected in a body of water. The skyline includes several tall buildings with lit windows, and a bridge is visible on the left. The lights from the buildings and the bridge are reflected in the calm water.

Helping our members work together to keep the lights on...
today and in the future

ISO/RTO Challenges and Opportunities

DOE Transmission
Workshop

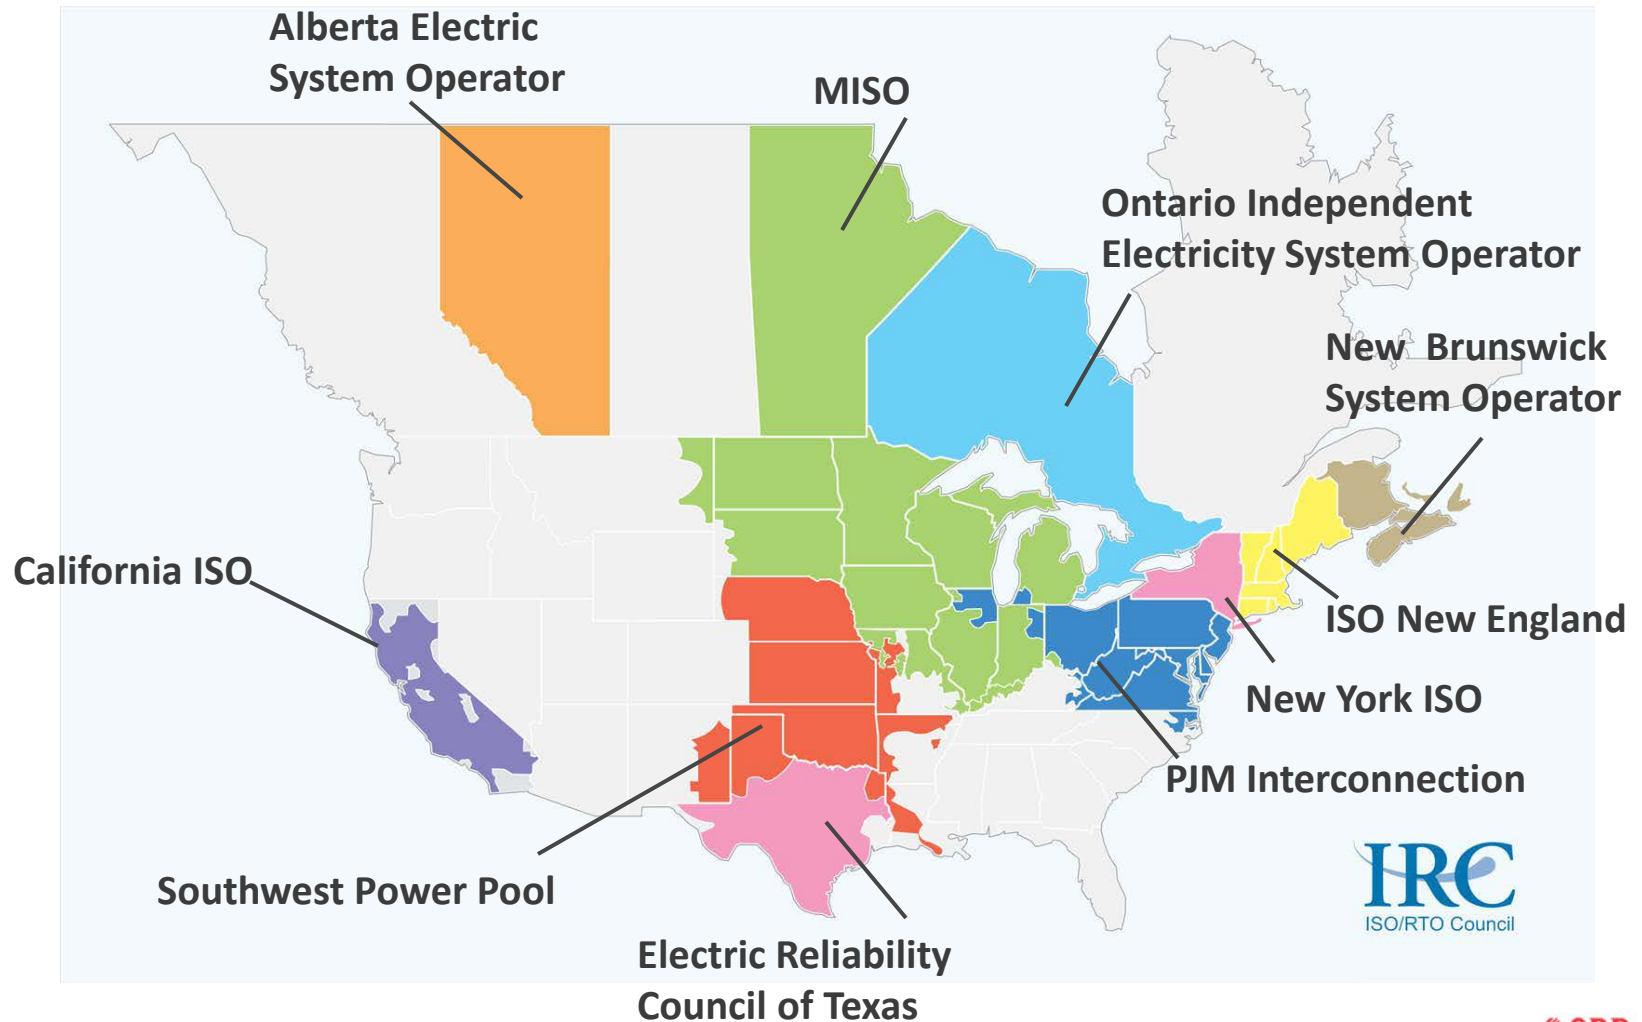

Crystal City, VA

November 1, 2012

Carl Monroe, EVP & COO

Independent System Operator (ISO) / Regional Transmission Organization (RTO) Map

Improving Visibility and Understanding

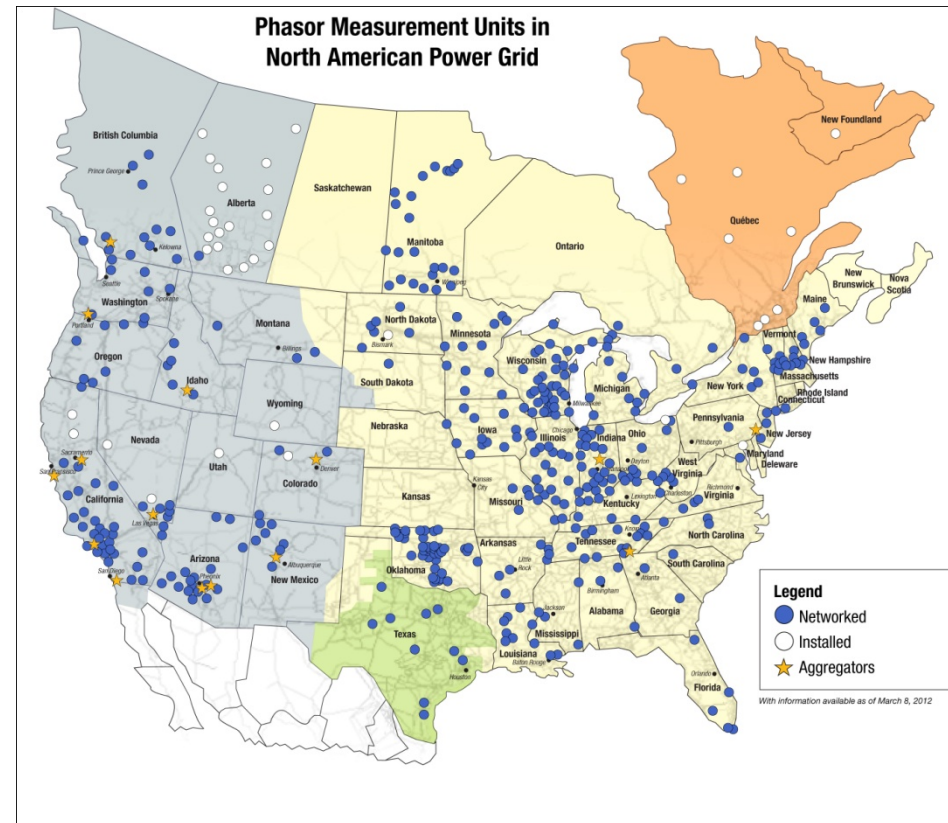

Improving Visibility and Understanding

Synchrophasor Deployment

Major progress due to SGIG and other utility (e.g., OG&E, SDG&E, TVA) projects

- **WECC: 250 PMUs (\$108M):**
PG&E, BPA, SCE, SRP, IP
- **NY ISO: 39 PMUs (\$74M)**
- **PJM: 90 PMUs (\$28M)**
- **MISO: 150 PMUs (\$35M)**
- **ATC: 5 PMUs (\$28M)**
- **Entergy: 41 PMUs (\$10M)**
- **ISO New England: 30 PMUs (\$9M)**
- **Duke Energy: 45 PMUs (\$8M)**
- **Midwest Energy: 1 sub (\$1.5M)**

Challenge is Creating Understanding from Data

- Data helps understanding that needs to be addressed now and in the near future due to increased grid connectivity and complexity regarding controls and system response
- Manage data to create actionable information to improve grid operations, markets and planning
- DOE needs to pursue RD&D that will create opportunities for development of applications to improve grid efficiency and reliability

Wide Area Monitoring to Wide Area Situation Awareness

Russell L. Ackoff

"From Data to Wisdom", Journal of Applied Systems Analysis, Volume 16, 1989 p 3-9

Future Technology and Data Needs

- Enhanced collaboration and cooperation to leverage computing capabilities, development of improved algorithms and standards to enhance interoperability, i.e., Electrical Systems Hub(s)
- FACTS devices and controls to improve flexibility and resiliency for grid operations, e.g., system optimization / reconfiguration tools, power electronics to manage loadings on critical facilities, etc.
- Improved diagnostics and analytical capabilities using phasor data, using interconnection-wide phasor data for effective baselining and pattern recognition to develop SOL and alarm specifications and operator decision support tools.
