

Public-Private Partnerships Using Shared R&D Facilities

Presented at the High Value Roll-to-Roll Manufacturing Workshop Alexandria, VA 22314

December 2-3, 2015

Mark J. Shuart

R&D Facilities Program Manager Advanced Manufacturing Office manufacturing.energy.gov

Broad Topical Areas

Platform Materials and Technologies for Energy Applications

- Advanced Materials Manufacturing (Mat'l Genome, Nanomaterials, etc.)
- Critical Materials
- Advanced Composites & Lightweight Materials
- 3D Printing / Additive Manufacturing
- 2D Manufacturing / Roll-to-Roll Processes
- Wide Bandgap Power Electronics
- Next Generation Electric Machines

Efficiency in Manufacturing Processes (Energy, CO₂)

- Advanced Sensors, Controls, HPC Modeling and Platforms (i.e., Smart Manufacturing)
- Advanced Chemical Process Intensification
- Grid Integration of Manufacturing (incl. Combined Heat and Power)
- Sustainable Manufacturing (Water, New Fuels & Energy)

Emergent Topics in Manufacturing

AMO **Supported** R&D Facilities

- Critical Materials Institute: a DOE Energy Innovation Hub at Ames National Laboratory
- Manufacturing Demonstration Facility at Oak Ridge National Laboratory
- America Makes, an interagency National Additive Manufacturing Innovation Institute, led by DOD
- Power America: Next Generation Power Electronics Manufacturing Innovation Institute, led by North Carolina State University
- Institute for Advanced Composites Manufacturing Innovation, in negotiation with team led by the University of Tennessee
- Smart Manufacturing: Sensors, Controls,
 Platforms, and Models for Manufacturing, Funding
 Opportunity Announcement released
 September 16,2015

Critical Materials Institute

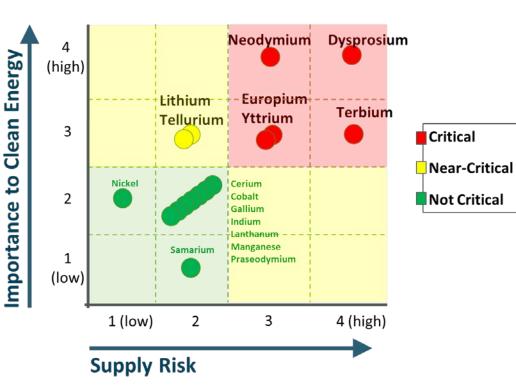

Critical Materials Institute

A DOE Energy Innovation Hub

- Consortium of 7 companies, 6 universities, and 4 national laboratories
- Led by Ames National Laboratory

	Dy	Eu	Nd	Tb	Υ	Li	Те
Lighting		✓		√	✓		
Vehicles	✓		✓			✓	
Solar PV							✓
Wind	✓		✓				

Critical Materials - as defined by U.S. Department of Energy, <u>Critical Materials Strategy</u>, 2011.

Manufacturing Demonstration Facility

Supercomputing Capabilities

Spallation Neutron Source

Carbon Fiber

Exit end of Microwave Assisted Plasma (MAP) process, jointly developed by ORNL and Dow

Additive Manufacturing

POM laser processing AM equipment

Manufacturing Innovation Institutes

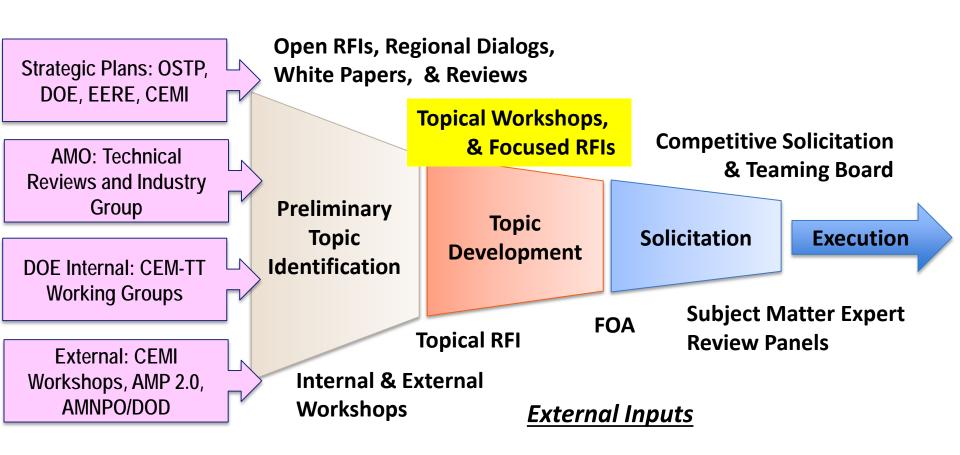

- Leverage effectiveness of regional, publicprivate partnerships to spur innovation and competitiveness of U.S. manufacturing
- Institutes form the core of the National Network for Manufacturing Innovation (NNMI); key tenets:
 - Develop critical technologies in TRL/MRL 4-7 range that will be used
 - Become self sustaining
 - Develop and educate an advanced manufacturing workforce
 - Bring together industry, universities and community colleges, federal agencies, and state & local governments
- Administration's Vision: up to 45 Institutes in 10 years

DOE Topic Development for Potential Institutes

DOF Tonic Identification Criteria

DOE TOPIC Identification Officia				
EERE Core Questions	Application to DOE Topic Selection			

High Impact:

Why is this a high-impact problem?

How would this technology development transform the marketplace? Additionality:

How will EERE Funding make a large difference

relative to what the private sector (or other funding entities) is already doing?

Openness: How will EERE make sure to focus on broad problems and be open to new ideas, new

approaches, and new performers? **Enduring Economic Benefit:**

How will EERE funding result in enduring economic benefit to the US, particularly the manufacturing

sector? Proper Role of Government:

How does EERE funding represent a proper and high-impact role of government versus something

best left to the private sector?

+ Appropriate Mechanism

What is manufacturing challenge to be solved? If solved, how does this impact clean energy goals?

If solved, who will care and why specifically?

Who is supporting the fundamental low-TRL research & why

wouldn't they support mid-TRL development? Who else might fund this mid-TRL development & how might

EERE/AMO support catalyze this co-investment? Has this mid-TRL Manufacturing Challenge been Stated Broadly?

Is there Fertile low-TRL Scientific Base to Address the Challenge? Has a Broad Set of Stakeholders been Engaged in Dialogue?

Would this Manufacturing Challenge Impact More than One Clean

Energy Technology Application? Is Industry Currently Trying to Identify Solutions?

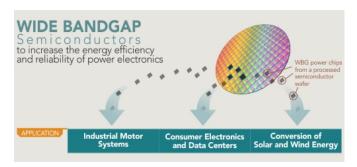

> What is the National Interest? What is the Market Failure? (Why Would Industry Not Solve this By Itself?)

Is there a Pathway for Federal Funding to End & What are the **Metrics for This Transition?**

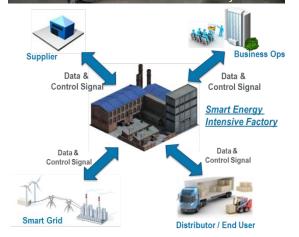

Is there Large Potential for Follow-On Funding, & What are the **Stage Gates to Follow-On Support?** Why is this specific mid-TRL Problem Best Addressed through a 5-Year, Multi-participant, Industry-oriented Institute (NNMI) now?

Clean Energy Manufacturing Innovation Institutes

- PowerAmerica: Next Generation Power Electronics Manufacturing Innovation Institute, led by North Carolina State University
- Institute for Advanced Composites
 Manufacturing Innovation, led by the
 University of Tennessee
- Smart Manufacturing: Sensors, Controls, Platforms, and Models for Manufacturing, Funding Opportunity Announcement released September 16, 2015
 - ➤ Webinar: Oct 6, 2015
 - > Concept Papers due: Nov 4, 2015
 - > Final Applications due: Jan 29, 2016
 - See manufacturing.gov for more information

Developing advanced manufacturing processes to enable cost-competitive, large-scale production of *wide bandgap* semiconductor-based power electronics, which allow electronic systems to be *smaller*, *faster* and more *efficient* than power electronics made from silicon.

- Wide Band Gap Semiconductors for Power Electronics
 - Silicon Carbide: 1200 V, 1700V, 10 KV Diodes and MOSFETs
 - Gallium Nitride: 600-900 V

Goal: Achieve cost parity with Silicon in 5 years

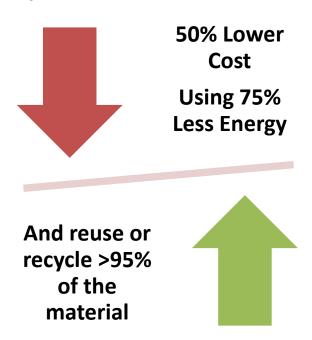

- Advantages
 - ➤ Operate at Higher Temperatures
 - ➤ Block Higher Voltages
 - > Switch Faster with less losses
 - ➤ Smaller Passive components
 - ➤ Potentially More Reliable
 - ➤ Substantial System-Level Benefits

Institute for Advanced Composite Materials Innovation

Objective

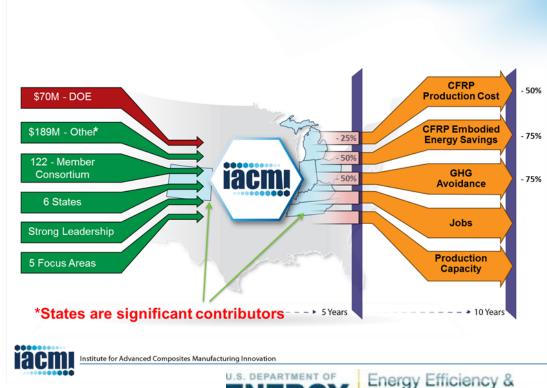

Develop and demonstrate innovative technologies that will, within 10 years, make advanced fiber-reinforced polymer composites at...

HPC4Mfg Program: Advancing Innovation

Increase Energy Efficiency - Advance Clean Energy Technologies

US Manufacturers, Industry Partners, and Consortia

- Identify industry challenge
- Contribute 20% "in kind" funding (non-gov)
- **IP Protection**
- Announce success

AMO funds National Labs to Partner with US Manufacturers **Proposals**

9/15

US Manufacturing losing market share and large energy consumer

Communicate

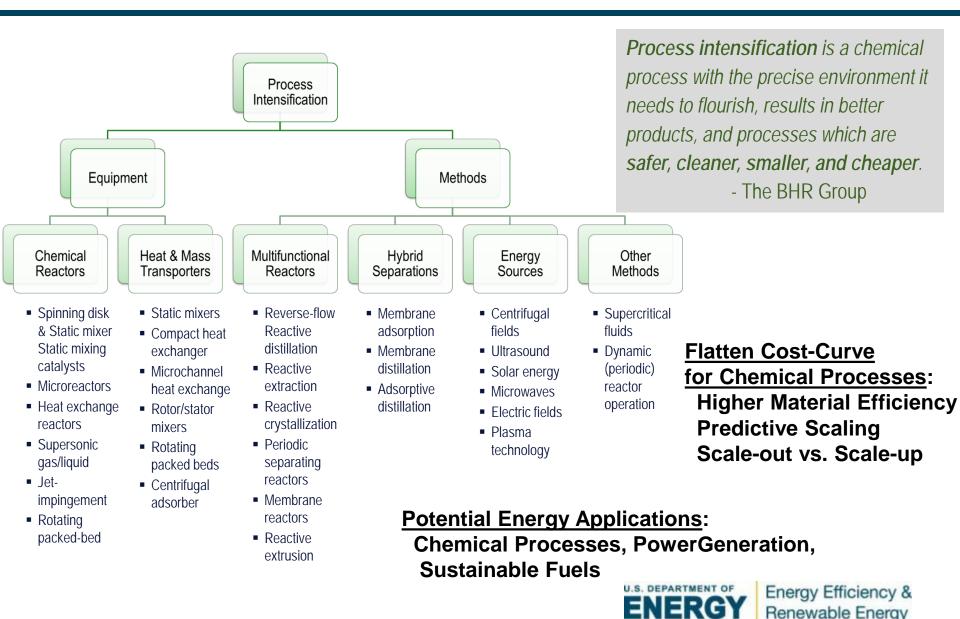

1/16

National labs provide

- Provide HPC capabilities and mod / sim expertise
- LLNL (lead), LBNL, ORNL, other labs join in future calls
- Partner with industry to develop full proposal
- < \$300k DOE funding
- Standard CRADA sympathetic to protection of industry IP

Modular Chemical Process Intensification

ADVANCED MANUFACTURING OFFICE

Advanced Materials Manufacturing

leveraging unique capabilities for fast-tracking materials to market, while expanding and enhancing the tools & methods in the core

Core Effort for Advanced Materials

feedback

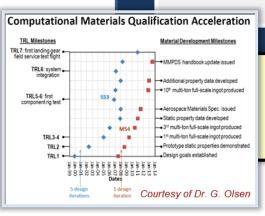

unique set of in-house capabilities in accelerated energy-materials development

Advanced Modeling, Computing, and Simulation Capabilities

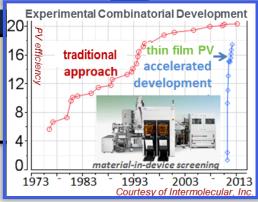

leveraging and expanding on the current MGI multi-physics, multiscale computational base High Throughput Synthesis, Characterization & Analysis Capabilities

high productivity combinatorial discovery & development tailored to specific energy end uses

linkages in methods / data / intellectual property

Combines multi-physics, multi-scale computation with highthroughput synthesis and characterization for intelligent, focused RD&D in numerous energy technology thrusts, managed, e.g., in cross-cutting Materials Manufacturing Centers of Excellence (MMCOEs)

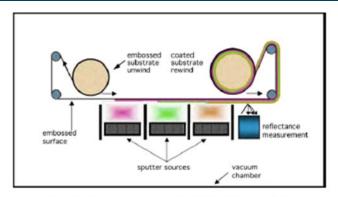

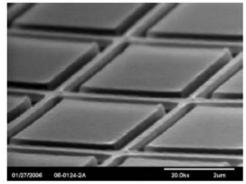

2D Fabrication / Advanced Roll-to-Roll Manufacturing

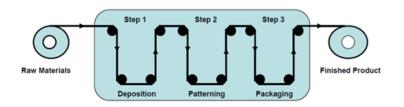

- Technology development for the electronic manufacturing service (EMS) sectors to move from plate-to-plate standard lithography to continuous R2R processing.
- Miniaturization of critical feature sizes to the nanoscale
- Advancing tools and methods for process control, defect sensing, and real-time feedback
- Potential Energy Applications:
 Solar, Batteries, Fuel Cell MEAs,

Separation Membranes, Building Envelopes, etc.

Prototype "Nano-Fab" using R2R at CAMM, Binghamton University (SUNY)

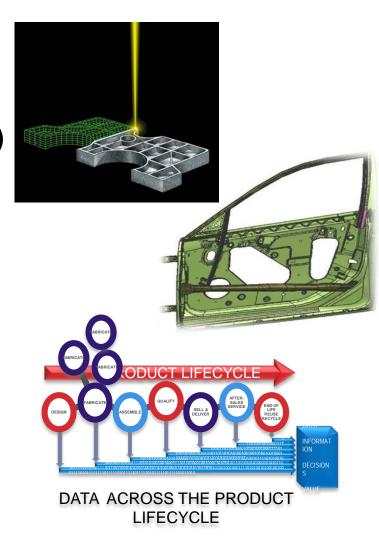

Idealized R2R Process Methodology

DOD Current and Planned Institutes

- America Makes
- Lightweight Innovations for Tomorrow (LIFT, formerly LM3I)
- Digital Manufacturing and Design Innovation
- Integrated Photonics Institute
- Flexible Hybrid Electronics
- Revolutionary Fibers and Textiles

Concluding Remarks

- The Advanced Manufacturing Office (AMO) uses a partnership approach with industry, academia, national labs, and government to develop crosscutting technologies
- The Administration has awarded or announced nine Institutes for Manufacturing Innovation (DOE – 3, DOD – 6)
- DOE uses a rigorous process to select Institute topics that includes inputs from industry and universities; the DOD process is similar
