

DOE conference presentation

July 21st, 2014

Piotr Galitzine, Chairman of the American Division of TMK - the world's largest steel pipemaker - will talk about trends and revolutions in hydrocarbon production worldwide. He will touch on new developments in horizontal shale drilling for both oil and gas, the emergence of the USA as a LNG exporter as well as what it means to world markets, the oil sands and their strategic importance to America specifically and the world at large. He will also touch on revolutionary trends in offshore, including gas production from frozen methanes (clathrates). Galitzine will also put these trends in perspective as regards world trade and geopolitical influence.
