

To: Larine Moore U.S. Department of Energy (FE-34), Office of Oil and Gas Global Security and Supply, Office of Fossil Energy, P.O. Box 44375, Washington, DC 20026-4375

I request that you extend the comment period for the Pieridae LNG Export Permit application docket no. FE-14-179-LNG.

I have just come to know of this application for export permit today and do not believe this is in the public interest. Moreover, impacted residents as well as stakeholders have not been given enough notification to participate in this process. Dozens of U.S. municipalities along with thousands of American citizens will be impacted by the upstream impacts of this project. This project will also adversely impact the wholesale gas market which may also adversely impact electric rates as well as grid reliability in the North East region. There are currently several interstate pipeline projects proposed in the Northeast region that may eventually connect to or feed into the pipelines used for export by Pieridae, including but not limited to the AIM, Constitution, NED, and Atlantic Bridge projects that are currently under review by FERC. None have received all of their final approvals and many are facing legal challenges. There are numerous individuals, as well community, environmental, civic, and public health organizations that have intervened in these projects. DOE must consider the full impacts upon all of these stakeholders and give them the opportunity to participate. To deny them this opportunity would be arbitrary and capricious.

The comment deadline should also be extended because there is "insufficient information to comment" as this proposal does not clearly state which pipeline projects would be necessary to achieve the needed gas supply for export and it does not clarify if this proposal would create a demand for additional pipeline construction.

Moreover the DOE must consider the full life-cycle of the gas to be exported from extraction through transportation, processing, liquefaction, and re-gasification; given that methane has 86 times the global warming potential as CO<sub>2</sub>e in a 20 year timeframe.
