Date: Monday, February 09, 2015 3:07:37 PM

Hello,

Natural gas sells for 3 to 4 times as much in foreign markets, driving up the domestic prices here.

Exports lower our supply available for domestic use, weakening the American economy.

Natural gas (methane)

is a greenhouse gas 86 times more potent than CO₂. Recent studies show that leaks of gas from drilling, transmission

and distribution make it no better for the global environment than coal. Because of these facts, natural gas exports are

not in the public interest. Because this comment period was not widely announced, I have only learned of it this weekend,

not allowing affected parties enough time to effectively comment or intervene. Please

provide an extension of time to comment

and intervene in this proposal. Thank you.

E. Quinn
