Subject: Updated Application Comment

Dear Sirs:

I am writing in opposition to the proposed Clean Line Plains & Eastern Transmission Line Project. In my opinion the updated application is no better than the original application. The information is flawed and misleading. The Benefit Analysis (Appendix-2-G) is one example. This is one mans biased opinion with no measurable data or factual information to back-up his statements. Arkansas, will have very little benefit when compared to the land loss and environmental damage. The right-of-way acquisition plan (Appendix 9-A) is also a gross misuse of a federal power to acquisition land for a project that has not been proven to be in the best interest of the people of Arkansas and particularly the people in Quitman, Arkansas. Please do not approve this misguided project. Wind power is great, but this project and its methodology is flawed.
