

# State of North Dakota ENERGY SECTOR RISK PROFILE

This State Energy Risk Profile examines the relative magnitude of the risks that the State of North Dakota’s energy infrastructure routinely encounters in comparison with the probable impacts. Natural and man-made hazards with the potential to cause disruption of the energy infrastructure are identified.

The Risk Profile highlights risk considerations relating to the electric, petroleum and natural gas infrastructures to become more aware of risks to these energy systems and assets.

## NORTH DAKOTA STATE FACTS

### State Overview

Population: 0.72 million (<1% total U.S.)  
Housing Units: 0.34 million (<1% total U.S.)  
Business Establishments: 0.02 million (<1% total U.S.)

### Annual Energy Consumption

Electric Power: 14.7 TWh (<1% total U.S.)  
Coal: 22,900 MSTN (3% total U.S.)  
Natural Gas: 267 Bcf (1% total U.S.)  
Motor Gasoline: 9,900 Mbarrels (<1% total U.S.)  
Distillate Fuel: 22,600 Mbarrels (2% total U.S.)

### Annual Energy Production

Electric Power Generation: 36.1 TWh (1% total U.S.)  
Coal: 28.2 TWh, 78% [4.2 GW total capacity]  
Petroleum: 0.03 TWh, <1% [0.1 GW total capacity]  
Natural Gas: 0.02 TWh, <1% [0.1 GW total capacity]  
Nuclear: 0 TWh, 0% [0 GW total capacity]  
Hydro: 2.5 TWh, 7% [0.6 GW total capacity]  
Other Renewable: 5.3 TWh, 15% [1.8 GW total capacity]

Coal: 27,500 MSTN (3% total U.S.)  
Natural Gas: 180 Bcf (1% total U.S.)  
Crude Oil: 242,500 Mbarrels (10% total U.S.)  
Ethanol: 8,700 Mbarrels (3% total U.S.)

## NATURAL HAZARDS OVERVIEW

Annual Frequency of Occurrence of Natural Hazards in North Dakota (1996–2014)

Annualized Property Loss due to Natural Hazards in North Dakota (1996–2014)

- According to NOAA, the most common natural hazard in North Dakota is Thunderstorm & Lightning, which occurs once every 4.8 days on the average during the months of March to October.
- The second-most common natural hazard in North Dakota is Winter Storm & Extreme Cold, which occurs once every 16.4 days on the average during the months of October to March.

- As reported by NOAA, the natural hazard in North Dakota that caused the greatest overall property loss during 1996 to 2014 is Thunderstorm & Lightning at \$43.2 million per year.
- The natural hazard with the second-highest property loss in North Dakota is Flood at \$30.4 million per year.

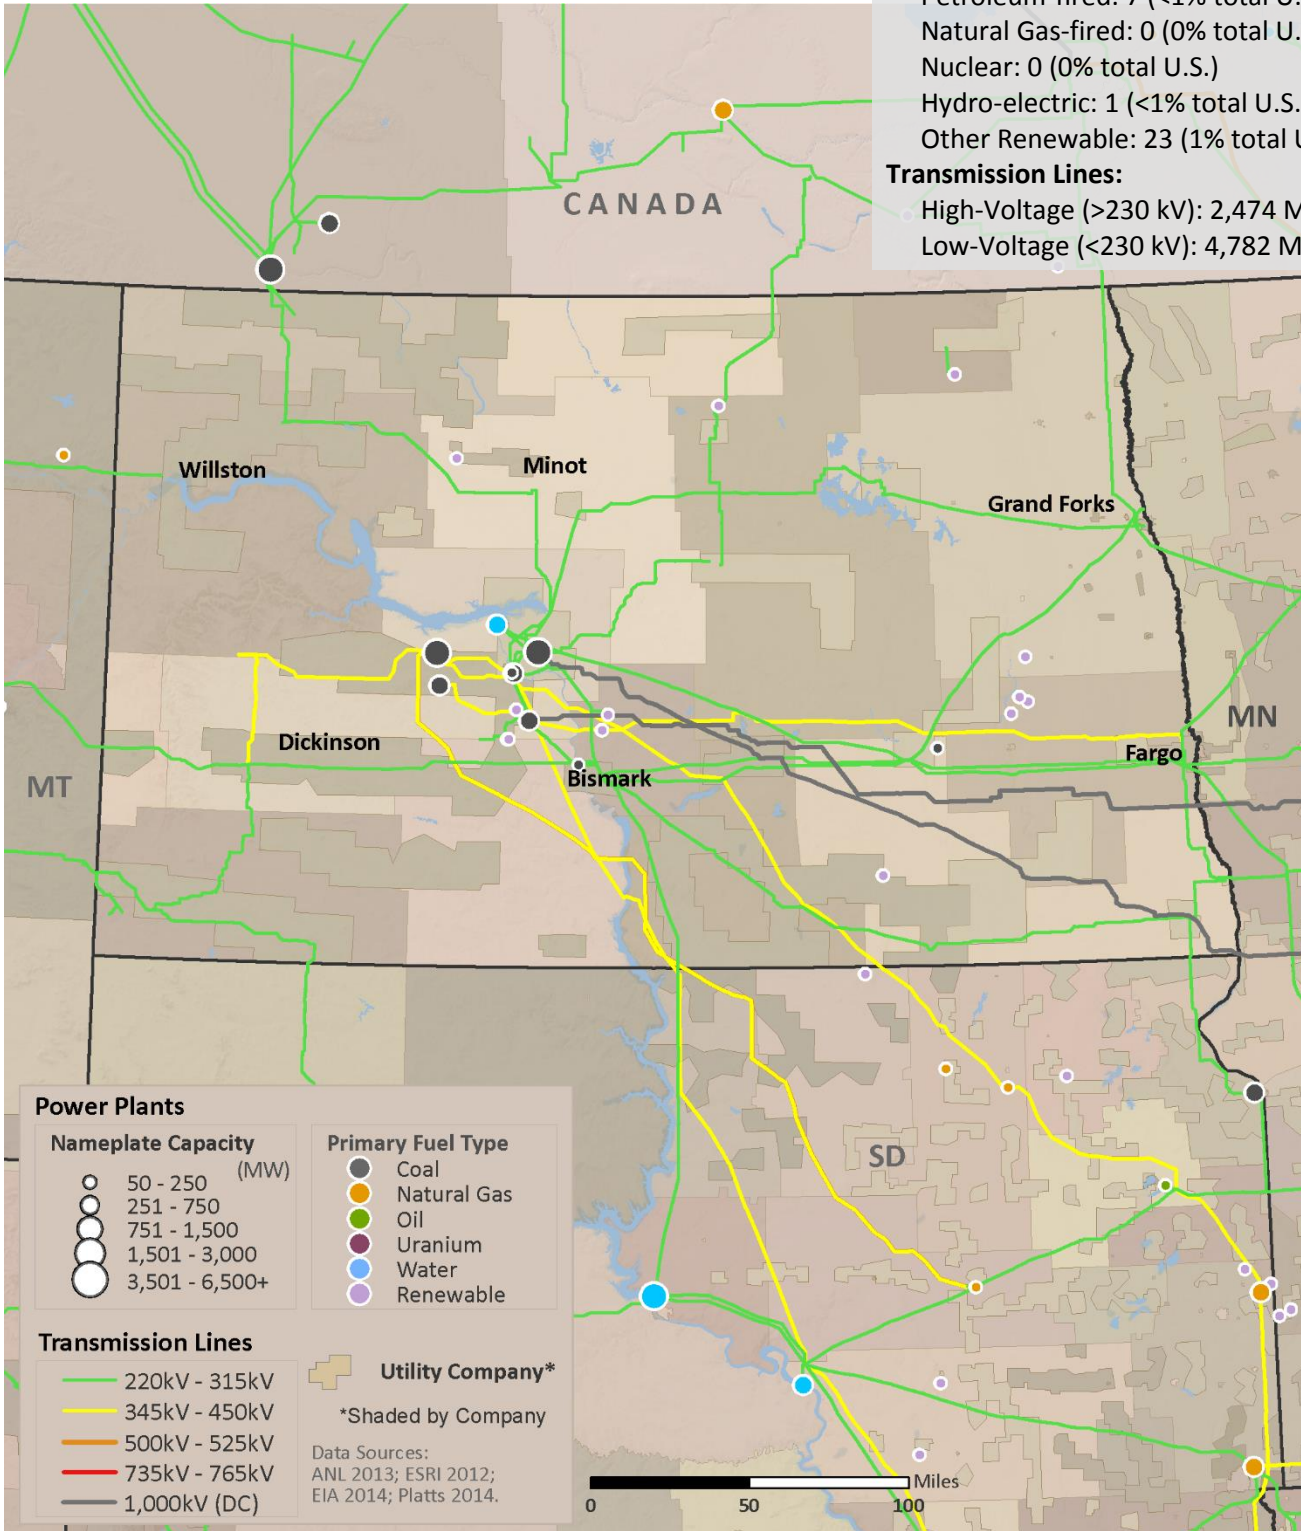

# ELECTRIC

**Electric Power Plants: 40 (<1% total U.S.)**

- Coal-fired: 9 (1% total U.S.)
- Petroleum-fired: 7 (<1% total U.S.)
- Natural Gas-fired: 0 (0% total U.S.)
- Nuclear: 0 (0% total U.S.)
- Hydro-electric: 1 (<1% total U.S.)
- Other Renewable: 23 (1% total U.S.)

**Transmission Lines:**

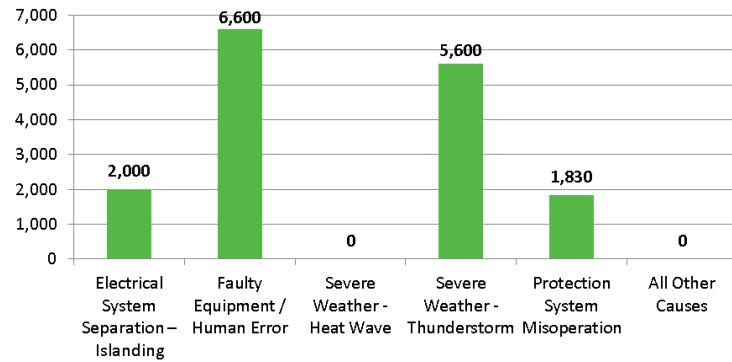

- High-Voltage (>230 kV): 2,474 Miles
- Low-Voltage (<230 kV): 4,782 Miles

# Electric Transmission

- › According to NERC, the leading cause of electric transmission outages in North Dakota is **Electrical System Separation – Islanding**.
- › North Dakota experienced **13 electric transmission outages** from 1992 to 2009, affecting a total of **16,030** electric customers.
- › **Faulty Equipment/Human Error** affected the largest number of electric customers as a result of electric transmission outages.

**Electric Customers Disrupted by NERC-Reported Electric Transmission Outages by Cause (1992–2009)**

Data Source: NERC

**Number of NERC-Reported Electric Transmission Outages by Cause (1992–2009)**

Data Source: NERC

# Electric Distribution

**Electric Utility Reported Power Outages by Month (2008–2013)**

Data Source: Eaton

- › Between 2008 and 2013, the greatest number of electric outages in North Dakota has occurred during the month of **October**.
- › The leading cause of electric outages in North Dakota during 2008 to 2013 was **Faulty Equipment/Human Error**.
- › On average, the number of people affected annually by electric outages during 2008 to 2013 in North Dakota was **39,062**.
- › The average duration of electric outages in North Dakota during 2008 to 2013 was **1,212 minutes or 20.2 hours a year**.

**Causes of Electric-Utility Reported Outages (2008–2013)**

Data Source: Eaton

**Utility Outage Data (2008–2013)**

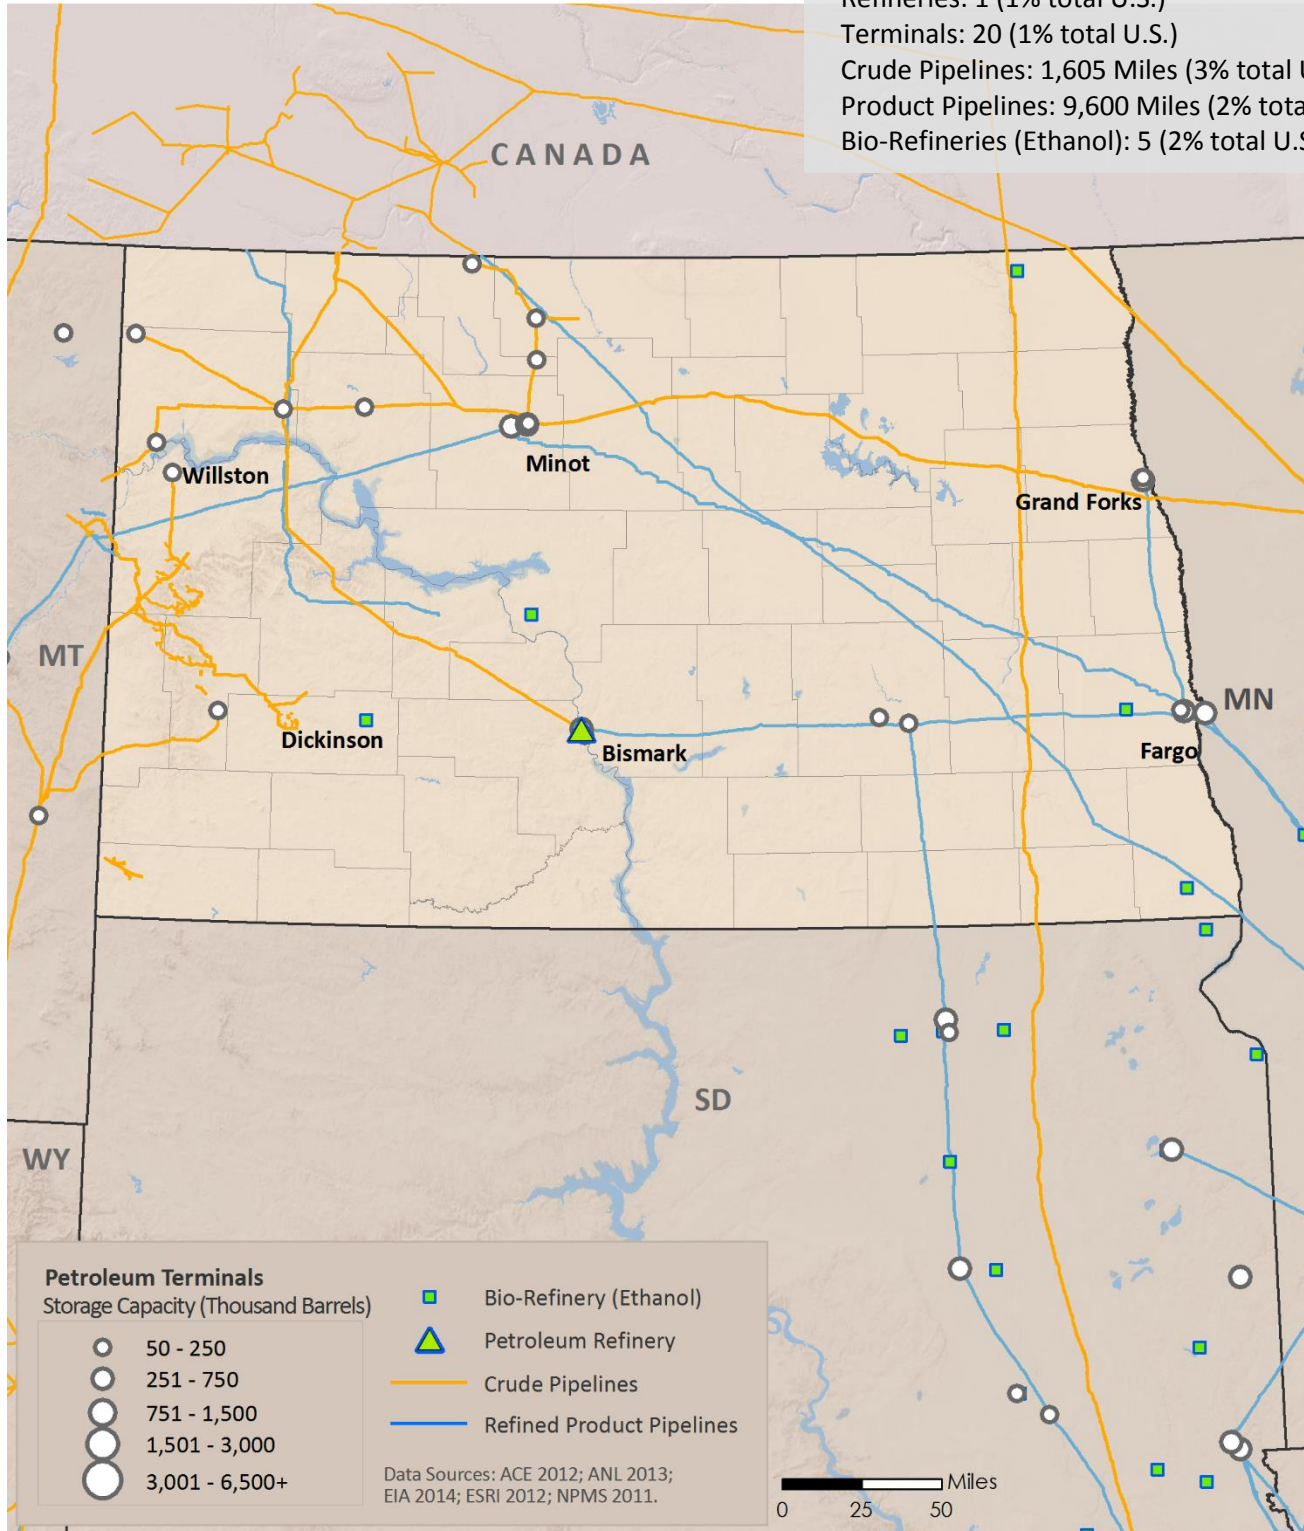

Data Source: Eaton

› NOTE: # of Incidents – The number within each pie slice is the number of event incidents attributable to each cause.

# PETROLEUM

### Petroleum Infrastructure Overview

Refineries: 1 (1% total U.S.)  
 Terminals: 20 (1% total U.S.)  
 Crude Pipelines: 1,605 Miles (3% total U.S.)  
 Product Pipelines: 9,600 Miles (2% total U.S.)  
 Bio-Refineries (Ethanol): 5 (2% total U.S.)

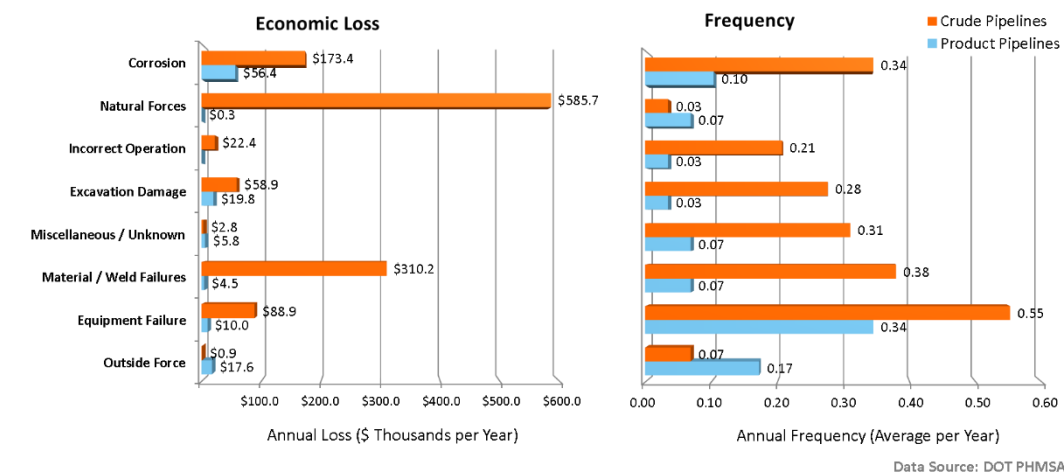

# Petroleum Transport

## Top Events Affecting Petroleum Transport by Truck and Rail (1986–2014)

The leading event type affecting the transport of petroleum product by rail and truck in North Dakota during 1986 to 2014 was **Incorrect Operation** for rail transport and **Incorrect Operation** for truck transport, with an average **0.4 (or one incident every 2.5 years)** and **1.0 incidents** per year, respectively.

## Top Events Affecting Crude Oil and Refined Product Pipelines in North Dakota (1986–2014)

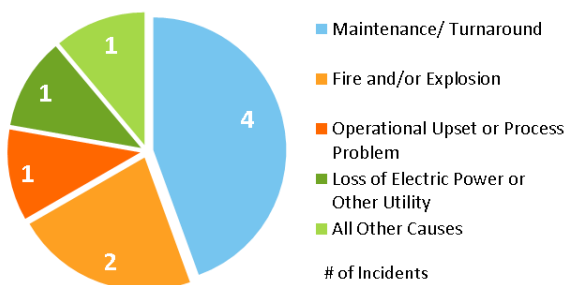

The leading event type affecting crude oil pipeline and petroleum product pipelines in North Dakota during 1986 to 2014 was **Equipment Failure** for crude oil pipelines and **Equipment Failure** for product pipelines, with an average **0.55 and 0.34 incidents** per year (or one incident every 1.8 and 2.9 years), respectively.

# Petroleum Refinery

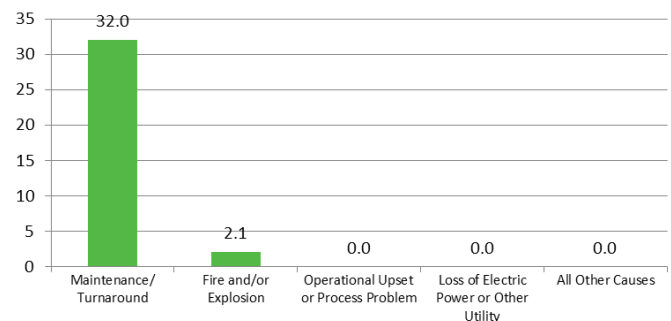

The leading cause of petroleum refinery disruptions in North Dakota from 2003 to 2014 was **Maintenance/Turnaround**. North Dakota's petroleum refineries experienced **9 major incidents** from 2003 to 2014. The average production impact from disruptions of North Dakota's refineries from 2003 to 2014 is **14.7 thousand barrels per day**.

## Top-Four Causes of Petroleum Refinery Disruptions in North Dakota (2003–2014)

Data Source: DOE OE

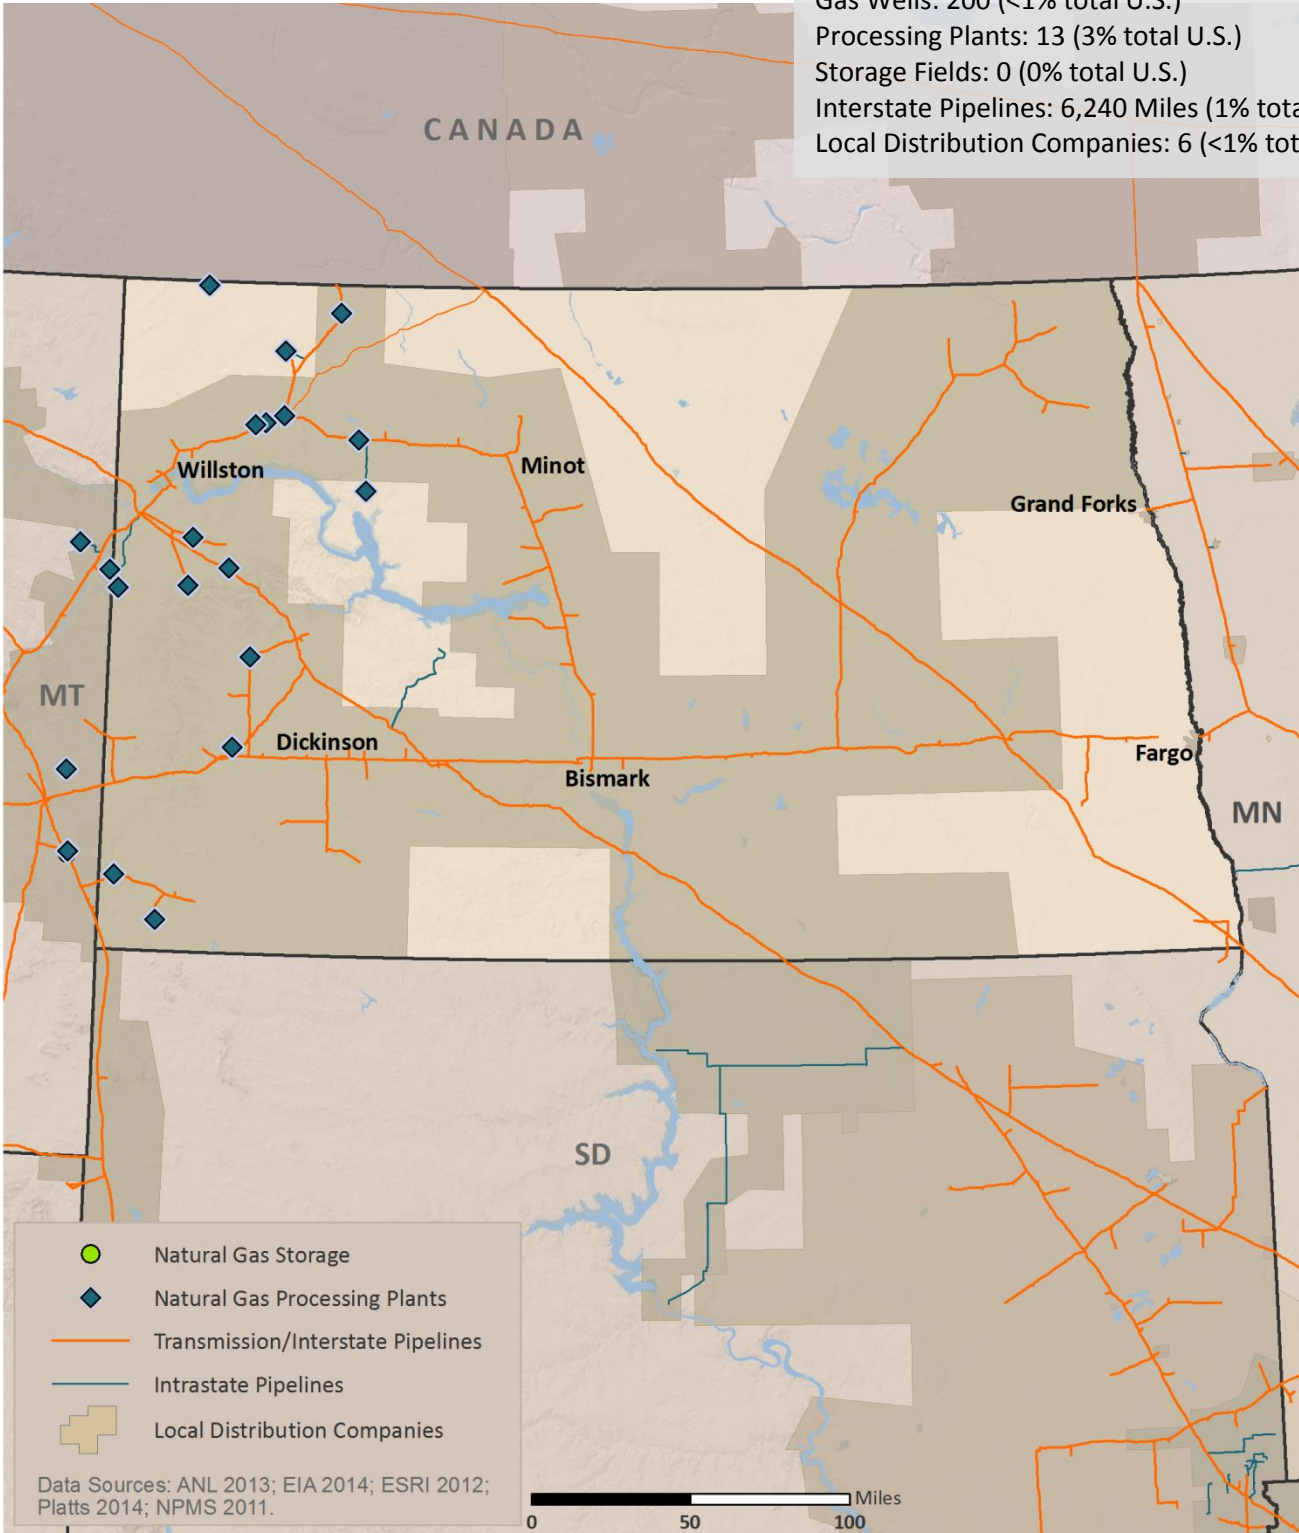

## Average Production Impact (thousand barrels per day) from Petroleum Refinery Outages in North Dakota (2003–2014)

Data Source: DOE OE

# NATURAL GAS

**Natural Gas Infrastructure Overview**  
Gas Wells: 200 (<1% total U.S.)  
Processing Plants: 13 (3% total U.S.)  
Storage Fields: 0 (0% total U.S.)  
Interstate Pipelines: 6,240 Miles (1% total U.S.)  
Local Distribution Companies: 6 (<1% total U.S.)

## Natural Gas Transport

- › The leading event type affecting natural gas transmission and distribution pipelines in North Dakota during 1986 to 2014 was **Equipment Failure** for Transmission Pipelines and **Outside Force** for Distribution Pipelines, with an average **0.13 and 0.16 incidents** per year (or one incident every 7.8 and 6.2 years), respectively.

### Top Events Affecting Natural Gas Transmission and Distribution in North Dakota (1986–2014)

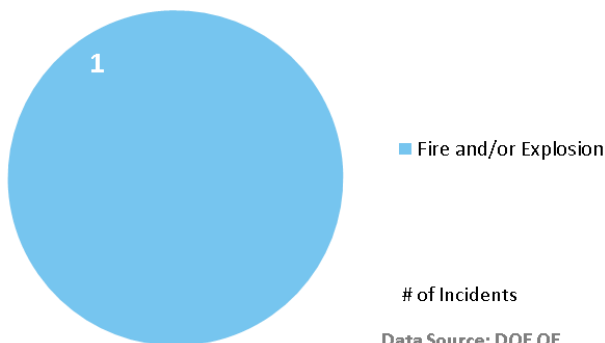

Data Source: DOT PHMSA

## Natural Gas Processing

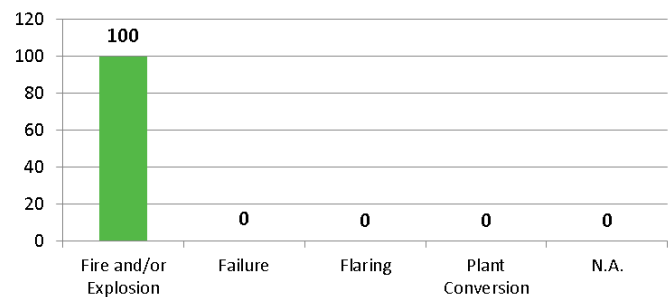

- › According to data derived from DOE's Energy Assurance Daily, the leading cause of natural gas processing plant disruptions in North Dakota from 2005 to 2014 is **Fire and/or Explosion**.
- › North Dakota's natural gas processing plants experienced **1 disruption** from 2005 to 2014.
- › The average production impact from disruptions of North Dakota's natural gas processing plants from 2005 to 2014 is **100 million cubic feet per day** (MMcfd).

### Top Cause of Natural Gas Processing Plant Disruptions in North Dakota (2005–2014)

Data Source: DOE OE

### Average Production Impact (MMcfd) from Natural Gas Processing Plant Disruptions in North Dakota (2005–2014)

Data Source: DOE OE

## Notes

- › Natural Hazard, Other, includes extreme weather events such as astronomical low tide, dense smoke, frost/freeze, and rip currents.
- › Each incident type is an assembly of similar causes reported in the data source. Explanations for the indescribable incident types are below.
  - › Outside Force refers to pipeline failures due to vehicular accident, sabotage, or vandalism.
  - › Natural Forces refers to damage that occurs as a result of naturally occurring events (e.g., earth movements, flooding, high winds, etc.)
  - › Miscellaneous/Unknown includes releases or failures resulting from any other cause not listed or of an unknowable nature.
  - › Overdemand refers to outages that occur when the demand for electricity is greater than the supply, causing forced curtailment.
- › Number (#) of Incidents – The number within each pie chart piece is the number of outages attributable to each cause.

**Bcf** – Billion Cubic Feet

**GW** – Gigawatt

**kV** – Kilovolt

**Mbarrels** – Thousand Barrels

**Mbpd** – Thousand Barrels per Day

**MMcfd** – Million Cubic Feet per Day

**MSTN** – Thousand Short Tons

**TWh** – Terawatt hours

---
