**Subject:** Clean line comment: Seizures

My name is, Nathan Ganster. I oppose the Plains and Eastern transmission project because it will affect me in the following ways:

My fiancé has a traumatic brain injury that causes grand mal seizures on rare occasion. Evidence shows that high voltage power lines can trigger these seizures. Her parents house is slated to be underneath one of your lines. My fiancé will not be able to visit her parents, grandmother or sister if this line goes through. What you are doing is affecting families directly. As a result of this going through, you will be responsible for causing further brain damage when more seizures occur as a result of your business venture.
