The Way Humans Get Electricity Is About to Change Forever

By Tom Randall

Bloomberg

In light of the shifts in energy use and production outlined in this article. PECL will do more harm than good. The steel manufacture, transportation and construction of this line and the wind farms needed to use it will all be carbon based as will the base load of electricity on the line. The so called clean energy generated may never get ahead of the carbon emissions from the construction of it!

This is Not Needed and it is Wasteful!

We need to back Solar!

In 2009 I heard 11 Nobel Laureates simultaneously and emphatically respond to a student question about energy. All said SOLAR is our only hope for the future.

Solar doesn't require 700 mile transmission lines.
