---

I am concern about the consequences harm Plains and Eastern Clean Line (PECL), if approved by DOE, will cause the Nation. Your decision affects not only the landowners, close residents on PECL path, but the thousands of people that will be force to accept "Clean" Line other projected interstate HVDC lines. To allow any private entity to become a Federal partnership or obtain Federal eminent domain sets a dangerous precedent.

The State of Arkansas is not alone in refusing "Clean" line eminent domain--Iowa, Illinois, Missouri. After thoughtful research , they became aware the negative long lasting consequences and have acted to protect their citizens.

Was Section 1222 of Energy Bill written to provide Federal legal seizure of private land to self-profit individuals? Has DOE looked at the entire picture? How does DOE plan to deal with the numerous negative consequences; constant corona noise and exposure, EMF long term daily exposure and its health effects to human and livestock, decrease property values- thus decrease county taxes that pay for local services, increase utility transmission cost to the household rate payers, fertile irreplaceable agriculture soil destroyed and alter inperpetuity , ( top soil mixed with underlying materials as clay and rocks), increase agriculture operation cost due to tower location, etc., environmental effects (corona effects on bees, destruction of hundreds of trees, nitrogen run off to deep soil compaction ( decompaction equipment isn't designed for soil that has consistence of layers of cement), unmanageable weed control., interference with GPS, T.V., pacemakers, safety hazards ( aerial spraying, all small aircrafts, irrigation, fires from combustion,easy terror sabotage.), increase liability insurance coverage for landowners who will be paying the taxes. All these factors are in perpetuity.

We pay the Federal Government to take care of us, not to use us, not to harm us.

Sincerely

Henry Auchstetter 716 Kleey Drive Rochelle Ill 61068
