I would like to voice some of many concerns I have with the clean line PowerLine that is trying to cross my families farm. We have been on our farm since the 30s I'm the 5th generation to be raised on it and would like to raise the 6th but with the size of this transmission line we would lose at least 75% of our property value according to local real estate agents and land appraisers. With that much of a loss we could not relocate even if we could sale who would want to buy our farm with this size of a line that makes this much noise and that would create havoc on satellite and cell phone reception. A private company should never have the right of enimat domain for private gain. This is wrong in every which way. We were not contacted properly my grandmother has been stressed to the point her health has deteriorated and this is not right. I urge you to oppose this project it is not needed nor wanted.
