## Submitter Info

Comment: See attached file(s) Same as below but with paragraphs not deleted. I strongly urge you to deny "Clean" Line Energy Partners, LLC's application. It is grossly inappropriate and

raises many issues of social justice and constitutional rights. As the major points have already been submitted repeatedly, I'll merely second all of the issues and concerns raised with "Clean" Line Energy Partners and their 14 LLC's. I just received an email today from Rock Island "Clean" Line (one of "Clean" Line's other LLC spec projects) asking me to sign a petition to the Department of Energy. As "Clean" Line, the company under review, actually started this petition, I find this also grossly inappropriate. As the petition sugar coats the issues with "forward looking statements" and totally fails to mention issues such as massive eminent domain takings or the epic proportions of "Clean" Line's attempted land grab, this just illustrates the lengths this LLC-empty shell-spec company is willing to go in order to line their pockets at the grave expense of tens of thousands of landowners. A significant number of signatures already on the petition come from their employees, land agents, and family members. There is no sugar coating massive violations of constitutional rights and social justice. Here is the exact text of the solicitation email forwarded to me today from Hans Detweiler, VP of "Clean" Line Energy Partners and registered lobbyist to the U.S. House and Senate for issues of Federal Eminent Domain. (Note: none of the known opposition to "Clean" Line received this email.) "Thank you for your continued support of the Rock Island project. I wanted to let you know that we are at a critical juncture for another one of our projects, the Plains & Eastern Clean Line, and I am reaching out to ask for your help. The Department of Energy is currently reviewing the Plains & Eastern Clean Line transmission project. The Plains & Eastern Clean Line will deliver very low-cost, clean energy to more than one million American homes every year and will create thousands of jobs. Public input is key to this process, and the Department of Energy needs to know that people across the country support this project. The Department of Energy will be receiving comments from the public on the project until June 12. We would really appreciate it if you would join the growing number of individuals who support more clean energy and new jobs by signing our petition. You can sign the petition by clicking here. It will only take a few minutes of your time. Thank you so much for helping us generate and deliver more pollution-free, low-cost wind energy. Feel free to send along to your colleagues, friends and family if you think they would like to help out as well! Thank you, Hans Detweiler" Final comment: You need to take a serious, long, hard look at what this company is actually all about. \*©
