

November 3, 2010

Dr. Jerry, Pell NEPA Document Manager  
Office of Electricity Delivery and Energy Reliability  
OE-20  
US Department of Energy  
Washington, DC 20585

Dear Sir:

I am writing in regards to the Energia Sierra Juarez US. Transmission Line Project DEIS. There are some areas of concern that I would like to address.

- 501-1 1) Visual Impacts: States Permanent Moderate long-term adverse impacts, after project construction is completed. I would argue that it would be Major from a resident standpoint. I moved to the area because of the visual beauty and the open panoramic views. The community also relies on these views for the tourist trade which is the Majority of the economy for local business. The area is also applying for Dark Skies recognition for Amateur Astronomers and the business that support them. The FAA lighting would affect this status. The existing power towers that have now installed the lighting have contributed to light pollution in the area more would just increase it to the point that the application would probably be null and void.
- 501-2 2) Biological Impacts: States that Mountain Lion habitat is low per USFW discussion no surveys were conducted. Two Mountain Lions have been sited in the area one's range was from Boulevard to Inko Pah and the other from the Desert to McCain Valley. I know that two lions have GPS collars and are monitored. DEIS states Big Horn Sheep low and not in the area. Big Horn Sheep have been photographed and seen in the area. Photographs were submitted at the Boulevard DEIS hearing by a resident in attendance. The Biological impacts would change when cumulative impacts taken from past, present and future projects. San Diego has a very unique environmental ecology not found anywhere else in the world. You can go from one eco environment to another within six miles and find different species of plants and animals where you would have to travel fifteen hundred miles or more elsewhere in the United States to experience. In my humble opinion a two to three week biological survey is not adequate to ascertain environmental impacts. San Diego County's environment is very fragile and impacts could be very dramatic and devastating to the ecology.
- 501-3 3) Fire and Fuels Management: 3.9.1.3 Fire Fighting Services states Station 48 is staffed by One full time firefighter and four volunteers. This is not correct. The station number is 47 and currently has no staffing paid or volunteer. In the last year the station may have had staffing 14 days out of 365 days. Fire Hazards would increase as a result of these projects. Many of these communities do not have full time paid fire departments and rely on Volunteers and Reserves. Some communities do not even have any staffing of these fire stations due to lack of Volunteers and Reserves. San Diego County is in a fire prone environment and has suffered through many large wildfires note 2003 and 2007. To add more projects, would increase the threat and potential to start wildfires, whether they be 3 percent or 100 percent will unnecessarily submit the citizens to the potential loss of life and or property. The environment would also suffer from the increase numbers of wildfires. Many of the projects have stated proudly that there project has a low fire potential start stated in percentages. I ask, what is an acceptable casualty rate? I would hope your answer is that we should have no casualties. These projects also present new problems to firefighting resources both on the ground and aerial. This would create life safety issues to firefighters and would require different tactics be deployed to fight the fire. This would allow the fire to become larger and potentially more devastating.
- 501-4 4) Socio Economics: DEIS states Minor Short Term adverse impacts to property values due to visual impacts. The visual impacts would not be short term so I do not understand how property value decrease would be short term as the main value is the visual aesthetics. The DEIS does not address the probable increase of Fire Insurance to residents due to increased fire risk.
- 501-5

**RESPONSE TO 501-1:** The referenced impact assessment conclusion applies to the proposed transmission lines in the U.S., as viewed from key observation points in the U.S. EIS Section 5.3.2 provides further discussion of cumulative visual impacts, and acknowledges that the ESJ U.S. Transmission Line project, combined with other proposed project structures, would introduce additional industrial character wherever they are viewable. The combined size and character of the introduced structures, as well as the large number of structures required for the respective projects, would result in considerable structure contrast, view blockages, and skylining in the region.

DOE is not aware of any official initiative to apply for Dark Sky status. DOE understands that Dark Sky status is a designation made by a private organization, the International Dark-Sky Association, and that communities' eligibility for this designation is determined on a case-by-case decision by that organization. Accordingly, DOE cannot specifically assess eligibility for this designation. As discussed in Section 2.4.3, it is expected that the proposed transmission line would not be lighted at night, as both FAA and the U.S. Border Patrol have indicated that the proposed transmission line structures would not require night-time lighting. In Section 3.2.2, the EIS acknowledges that if authorities in Mexico were to require nighttime lighting for wind turbines there, such lighting would be visible from the U.S. The text has been revised to indicate that this lighting could affect astronomical viewing from the U.S.; as discussed above, however, DOE is not in a position to comment on whether this could affect the potential "dark sky" status of areas in the U.S. Section 5.3.2 has been

501-6 5) Environmental Justice: DEIS states No disproportionately high or adverse impacts to low-income or minority populations are anticipated. If higher Fire Insurances rates occur this would impact low income and minority renters due to increased rent costs. The area has a very high low income and minority population per capita than other areas of the County. These families also rely on tourist to sell there crafts and items that they produce from cottage industries. This group would also be affected from the diminishing tourist trade due to the visual impacts from the project.

501-7 6) Cultural Resources: DEIS states that Minor potential for impacts to unknown cultural resources. San Diego County is very rich with Archaeological Resources. The project area is in an Archaeological District. The Boulevard Jacumba area has many recorded sites with new ones being found continuously. These sites are both historic and pre historic sites with some being multi component. Old Highway 80 is now a Historic Highway and is also part of the tourist attraction to the area. I question whether the impacts would be considered Minor when the cultural resource is unknown. Could a potential site discovered during construction be significant or is it assumed that it would be insignificant before discovery?

501-8 In the past, projects have promised benefits to the communities because of the construction showing little to no actual benefits to the community. The project completes the company leaves most times with damage to the roads, property damage, and lost business due to construction. The area is already economically depressed, low income families, and higher unemployment than other areas of the County. These projects would further exacerbate the struggling communities trying to recover. This project will be out of Country and would not help the unemployment and would potentially result in outsourcing jobs. In these times trying to reduce our dependency for foreign energy, it seems we are moving towards more foreign dependency. The list of projects shown in DEIS for cumulative impacts missed the Border Patrol Station in Boulevard, The Border Fence, Truck Haven Geo-Thermal project, and the numerous other planned Solar Projects on BLM land. In the past these lands were held by BLM to protect habitat. Now it seems the Federal Government is in the energy business, on lands that were previously hands off.

In conclusion, I hope you take the comments stated into serious consideration and also look at the cumulative impacts of past, present, and future projects as a whole and not individually when determining the total impacts. Lastly, it is my hope that you would look at all the impacts on the communities in the project area that are struggling to come back from previous project impacts. We truly are a David fighting a Goliath. There are better alternatives such as, roof top solar on existing structures situated on already disturbed ground and small wind generation at the same. We are told to move away from creating companies too big to fail and here we are creating one with government help. I can only hope that you will not overlook all aspects and that we do not create another Gulf Oil spill scenario because of lack of due diligence and prudence. Thank you for your consideration of these comments and allowing me to participate in this process.

Sincerely,

Mark Ostrander /s/

revised to include discussion of cumulative impacts in the region from increased nighttime lighting.

**RESPONSE TO 501-2:** Potential project impacts to biological resources are described in Section 3.1 of the EIS. Additional analysis of potential biological resource impacts has been added in Section 3.1. EIS Section 3.1 is updated to include further discussion of the mountain lion, and potential impacts to this species. Response to comment 108-7 provides additional discussion of Peninsular bighorn sheep population, migration patterns, and migration corridors. DOE's March 8, 2011 letter to USFWS indicates the outcome of consultation with the USFWS, including consultation on potential impacts of the ESJ U.S. Transmission Line project on Peninsular bighorn sheep. This letter is added to EIS Appendix C. Additional analysis of potential cumulative biological resource impacts has been added in Section 5.3.1 (Cumulative Impacts).

**RESPONSE TO 501-3:** Refer to response to comments 306-1 through 306-10 for an updated discussion of fire protection measures that have been incorporated into the project based on information provided by the San Diego Rural Fire Protection District. Section 3.9.1.3 of the EIS is revised to include updated information regarding local fire staff and equipment availability.

**RESPONSE TO 501-4:** The EIS at Section 3.13.2.3 acknowledges that potential impacts to property values are related primarily to impacts to visual resources from the presence of transmission lines and wind turbines. As noted in the analysis, substantial research regarding views toward transmission lines was presented in the Sunrise Powerlink RDEIR/SDEIS, Section D.14.5.1 (CPUC/BLM 2008b).

DOE reviewed the following additional studies related to property value effects from transmission lines and wind turbines, and the EIS at Section 3.2 is augmented with this information.

*High-Voltage Transmission Lines: Proximity, Visibility, and Encumbrance Effects*, prepared by James A. Chalmers, PhD, and Frank A. Voorvaart, PhD. This study was published in the *Appraisal Journal*, Summer 2009, and concludes:

*“There is no evidence of systematic effects of either proximity or visibility of 345-kV transmission lines on residential real estate values....The professional literature cited, combined with the results reported here, support the position that a presumption of material negative effects of HVTLs on property values is not warranted.” [page 239]*

The full text of this study is available online at:  
<http://www.msti500kv.com/uploads/docs/High%20Voltage.pdf>

*The Impact of Wind Power Projects on Residential Property Values in the United States: A Multi-Site Hedonic Analysis* by Ben Hoen, Ryan Wiser, Peter Cappers, Mark Thayer, and Gautam Sethi. This study was prepared by the Ernest Orlando Lawrence Berkeley National Laboratory in December 2009, and concludes:

*“The various analyses are strongly consistent in that none of the models uncovers conclusive evidence of the existence of any widespread property value impacts that might be present in communities surrounding wind energy facilities. Specifically, neither the view of the wind facilities nor the*

*distance of the home to those facilities is found to have any consistent, measurable, and statistically significant effect on home sales prices. Although the analysis cannot dismiss the possibility that individual homes or small numbers of homes have been or could be negatively impacted, it finds that if these impacts do exist, they are either too small and/or too infrequent to result in any widespread, statistically observable impact.”[page iii]*

The full text of this study is available online at: <http://eetd.lbl.gov/EA/EMP/reports/lbnl-2829e.pdf>. A summary presentation of the study is available online at: <http://eetd.lbl.gov/EA/EMP/reports/lbnl-2829e-ppt.pdf>.

Also see “*Field Guide to Wind Farms and their Effect on Property Values*” published by the National Association of Realtors at: <http://www.realtor.org/library/library/fg509#topicb>

**RESPONSE TO 501-5:** Refer to response to comment 107-2 for a discussion of fire insurance rates. Additional discussion of the project’s potential to result in decreased property values and increased fire insurance rates has been added to Section 3.13.

**RESPONSE TO 501-6:** Analysis described in the EIS determined that the area has low income and minority populations, as the commenter suggests. However, the potential impacts to these populations that are mentioned by the commenter have not been determined to be high and adverse. Specifically, analysis described in the response to comment 107-2 finds no indication that the project would increase fire insurance rates. Also, Section 3.13 has been

updated in the final EIS to discuss potential impacts to tourism; the analysis described here finds it unlikely that the project would diminish tourism. Refer to response to comment 106-2 for further discussion of potential environmental justice impacts.

**RESPONSE TO 501-7:** The applicant has proposed several measures which are consistent with established protocol for cultural resource impact avoidance and mitigation. These measures are listed in EIS Section 2.7 and discussed further in Section 3.5 (Cultural Resources). As discussed in response to comment 305-20, the applicant-proposed measures are revised to indicate that ESJ will implement cultural resource construction grading monitoring and a potential data recovery program, to be developed in accordance with the County of San Diego Guidelines for Determining Significance and the Report Format and Content requirements. The program would be conducted by a County of San Diego Qualified consultant.

EIS Section 3.7 is updated to include a discussion of a segment of historic U.S. Highway 80, site number P-37-024023, that has been determined to be a contributing element to the resource's listing on the National Register of Historic Places as a "historic property" and on the CRHR (CEQA Guidelines Section 15064.5) as a "historic resource" under Criterion A. The road segment is located on the southern boundary of the proposed JCSD groundwater well access road (AECOM 2011a). The proposed JCSD water well access road would not alter any of the character defining features of the segment of P-37-024023, Old Highway 80, located directly south of the APE. Therefore, project construction or operation activities are not expected

to adversely impact to this resource.

**RESPONSE TO 501-8:** Sections 5.3.13 and 5.3.14 have been revised to provide additional discussion of cumulative impacts on socioeconomic conditions and environmental justice, as discussed in the comment. Section 5 has been revised to include consideration of the projects mentioned in the comment as potential sources of cumulative impact.

As is explained in text added to Section 1.5.1.2, distributed energy alternatives, such as small scale solar panel applications in urban settings, are outside the range of reasonable alternatives analysis because they do not respond to DOE's purpose and need.

Subject: New Energia Sierra Juarez Transmission Line EIS comment from Brendan

Brendan Hughes has entered the following comment:

502-1 I believe the Energia Sierra Juarez transmission project is flawed by its very nature. It aids in the industrialization of Mexico's wild lands. DOE should not be facilitating this destruction any more than it should be facilitating the widespread destruction of habitat in the US in the form of massive solar and wind projects. DOE should focus on distributed renewables, such as rooftop solar, and if necessary site large renewable projects on previously-disturbed agricultural and mining lands. The mountain habitats of Baja and Alta California are a non-renewable resource that should not be sacrificed for profit when valid alternatives exist.

502-2 Additionally, this project has the potential to have impacts on the peninsular bighorn sheep that are not analyzed in the EIS. Even though USFWS does not think bighorns will occur within the project area, they also probably didn't think bighorns would present themselves in the footprint of the Imperial Solar Project on the floor of the Imperial Valley. The project proponent should do more extensive studies for bighorn sheep and potential disruption of habitat connectivity.

Thank you for your consideration.

NOTE: Please do not mail me paper documents regarding this project. I would like to only receive electronic notices and documents. Thank you.

**RESPONSE TO 502-1:** The commenter's preferences are noted.

DOE has no jurisdiction over the proposed wind development in Mexico; the analysis of potential impacts related to the ESJ Wind project in Mexico is limited in scope to those impacts that have a potential to impact the U.S.

As is explained in text added to Section 1.5.1.2, distributed energy alternatives, such as small scale solar panel applications in urban settings, are outside the range of reasonable alternatives analysis because they do not respond to DOE's purpose and need.

**RESPONSE TO 502-2:** Response to comment 108-7 provides additional discussion of Peninsular bighorn sheep population, migration patterns, and migration corridors. DOE's March 8, 2011 letter to USFWS indicates the outcome of consultation with the USFWS, including consultation on potential impacts of the ESJ U.S. Transmission Line project on Peninsular bighorn sheep. This letter is added to EIS Appendix C.

Comments to EIS for the Energia Sierra Juarez Transmission lines

Mr. Pell I am a local homeowner who owns a home and 175 acres just North of the impacted area.

After review of the Environmental Impact Statement (EIS) I see many errors and opinions that are not substantiated with facts.

Section 3.1 States the area has a Moderate Value for Wildlife.

Jacumba has a vast resource of wildlife. This web site lists species in Jacumba that are unique and only found in this area in San Diego County and California.  
<http://www.sdnhm.org/research/birds/sdmamm.html>

This section also states that the only Bighorn sheep observed were a small group more than 4.5 miles NE of the alternate corridor.

503-1

I have many photos that dispute this. I have attached a photo that was taken at Boulder Park less than 1.5 miles from the impacted area. I have also attached a photo with much more than a "small group" of sheep.

California Fish and Game Biologist for this area has done extensive research in this area and believes as do many others that the Peninsular Bighorn Sheep use the mountains just South of the border as a corridor to the north. The "cumulative" affect of the Power lines, Sub Station and some 1200 wind machines will decimate these animals.

It appears as if the Bighorn sheep were studied for a total of less than 4 weeks in the EIS. Many conditions during the time of the study are not what normally occur such as drought, and seasonal movement. California DFG biologist Mr. Botta is a wealth of information on the sheep and other animals in the area yet he was never contacted for this study. All information was compiled by a few out of town people who were working for Sempra.

Section 3.4 states that the developed check points on I-8 & Hwy 80 makes the area Industrial and Utilitarian.

503-2

This is simply an opinion. I have attached a photo from the top of Table Mountain just North of the impacted area. Nothing in this photo is "Industrial & Utilitarian" Look for your self at the photo and it's real stretch to call one border fence and a temporary border patrol station in a vast open area and rural setting Industrial and Utilitarian.

**RESPONSE TO 503-1:** Response to comment 108-7 provides additional discussion of Peninsular bighorn sheep population, migration patterns, and migration corridors. DOE's March 8, 2011 letter to USFWS indicates the outcome of consultation with the USFWS, including consultation on potential impacts of the ESJ U.S. Transmission Line project on Peninsular bighorn sheep. This letter is added to EIS Appendix C.

DOE distributed the Draft EIS to the California Department of Fish and Game, Region 5 (see comment letter 301 from the California Office of Planning and Research, list of reviewing agencies). DOE has not received comments on the Draft EIS from this agency. DOE has reviewed the department's comment letter on the Draft EIR/EIS for the combined ECO Substation, Tule Wind, and ESJ U.S. Transmission Line projects. Although these comments were not specific to the ESJ U.S. Transmission Line project, Section 3.1 is updated with appropriate revisions in response to the department's comments on that document, as they relate to the ESJ U.S. Transmission Line project.

**RESPONSE TO 503-2:** The EIS text referenced in the comment describes several built features in the project area and indicates that the presence of each of the individual features is industrial and utilitarian in nature, and that incongruity disrupts the intactness, unity, and, in instances, vividness of the viewshed (ICF Jones and Stokes 2010b). However, the visual assessment as a whole acknowledges that the project setting has high scenic resource value. Refer to the visual assessment in Section 3.2, which acknowledges and describes the scenic resource values of the project area. The project's potential contribution to cumulative visual impacts is discussed in Section 5.3.2.

The Border stations are Mobil and are not preeminent in nature. They are the only structures other than two houses in the area. There is no industry here.

I have attached a photo of what the pristine area looks like now and what the long range plan of Sempra is which is to decimate the land with thousands of wind machines, 58 acres of sub stations/ transformers and 10 acres of tie in lines going into Mexico. This will change this rural setting to one of Industrial Blight.

503-2

This is the area the EIS calls “Industrial & utilitarian?”

The link below is what Sempra wants the area to look like and the EIS is trying to portray the area as already industrialized which simply isn’t true.

[http://www.cpuc.ca.gov/Environment/info/asper/sunrise/rdeir/figs/fig\\_2-3-7b\\_kv84\\_table\\_mountain\\_simulation.pdf](http://www.cpuc.ca.gov/Environment/info/asper/sunrise/rdeir/figs/fig_2-3-7b_kv84_table_mountain_simulation.pdf)

503-3

Section 3.6 in noise lists traffic in the area as Average Annual Daily Traffic of 15,000 vehicles.

**RESPONSE TO 503-3:** A footnote has been added to Section 3.7 (Transportation and Traffic) to clarify the methodology for obtaining average annual daily trip estimates and indicate the possibility that weekend and holiday traffic may account for greater vehicle trips than average weekday travel. This distinction is also noted in Section 3.6.1.2 (Noise impacts associated with construction). The EIS acknowledges that increased sound levels due to an increase in traffic due to construction may be noticed at the two isolated residences along Old Highway 80 between Carrizo Gorge Road and the proposed route. However, construction-related trucks would use the roadway within the hours allowed by the County of San Diego, and the increase in sound levels – irrespective of the baseline traffic levels – would not exceed the County’s noise threshold for construction activities.

503-3 | This is very misleading. The majority of the traffic in this section of the I-8 freeway is that of recreational vehicles on weekends and holidays. Some 250,000 people visit Glamis Dunes on Thanksgiving alone. The majority of those people use the I-8 freeway in this area to get to Glamis. If you discount this Holiday you end up with very little daily traffic. My home is located some 1,500 feet from I- 8 and the traffic on this highway comes to a complete stop after 10:00 pm on the weekdays.

The EIS Report is written in a fashion where it paints a photo of this area unlike what it actually is.

503-4 | Section 3.9 shows with its map that the impact area is located adjacent to a zone listed as being a Very High Hazard for Fires. This project in conjunction with the others has a cumulative affect on fires and simply makes no sense given the lack of resources in the area and Mexico. Fires and wild animals have no boundaries.

There is not a full time Fire Department within 40 miles of the impacted zone. When I pulled permits for my house I had to turn my plans into the closet fire district and it was located in Jamul, Ca some 55 miles away. CDF or Cal Fire stations/ personnel are seasonal and not full time occupied stations. All other stations are volunteer. Relying on the Campo Indians for major brush fires in the area is just not prudent or realistic.

503-5 | Section 3.11 talks about water resources in the area. The information is based on Hydrology reports from 1980????????

Ground Water data is over 25 years old! Much has changed in this area since then, Bort Farms, and a 10-year drought were not even considered but are a huge impact on the ground water in this area. My neighbors well just north of the impacted area is over 1,000 feet deep and he gets less than 5 gallons per minute. Well in Jacumba are drying up and the water table is dropping at alarming rates. Your use of 780,000 gallons from a “brackish” source could be just enough to cause the town and possibly the region to run dry of water.

In Summary this project is all wrong for this sensitive area. The EIS study is based On little fact and a lot of assumptions. Time spent in the field was limited and some of The data collected or reported is 20 years old, other data is simple not true or reported in A Way that is very misleading such as the fire data, traffic and the presence of wild life.

Please review attached photos; the PDF’s couldn’t be attached to this word document.

Thank You

Derik Martin

**RESPONSE TO 503-4:** Refer to response to comments 306-1 through 306-10 for an updated discussion of fire protection measures that have been incorporated into the project.

**RESPONSE TO 503-5:** The EIS is updated at Section 2.4 to include a description of ESJ’s proposed groundwater extraction from a non-potable well in Jacumba. Section 3.11 (Water Resources) is also updated to include a discussion of potential impacts associated with the proposed groundwater use based on a groundwater impact study completed by the County of San Diego. Cumulative impacts on water supply, resulting from the proposed action in combination with other past, present, and future actions, are addressed in Section 5.3.11.

503-6 | Dr. Pell here are some of the Photos I took near the area of Impact. I have many more and have seen up to 13 sheep in one location, much different than what the EIS reports. These sheep are located just below Desert Tower near where the Sun Rise Power Link will go.

In addition to the sheep I had deer, fox, Turkey Voultures and a very large Red Tail Hawk all in a matter of two days of photo taking. I had over 100 photos of wildlife.

**RESPONSE TO 503-6:** DOE appreciates the commenter's photographs of bighorn sheep in the project area. Refer to the response to comment 503-1 for a discussion of bighorn sheep in the project area.

November 1, 2010

Dr. Jerry Pell  
Principal NEPA Document Manager  
Office of Electricity Delivery and Energy Reliability (OE-20)  
U.S. Department of Energy  
1000 Independence Avenue, SW  
Washington, DC 20585

I am writing you to express opposition to Energia Sierra Juarez U.S. Transmission's (ESJ) application for a Presidential Permit to build a cross-border transmission line between the U.S. and Baja California, Mexico (OE Docket Number PP-334).

Department of Energy is required to determine whether a project described in a Presidential Permit application is in the public interest. This determination is based on an examination of environmental impacts, reliability of the U.S. electric power supply system, and other relevant factors. The direct and indirect environmental impacts will be significant/non-mitigable if the ESJ project is approved. The ESJ project's impacts must be considered cumulatively, this is to say that all related project impacts including projects located in Mexico must be considered in the analysis. Alternatively, the Department of Energy is required to consider the impacts in the U.S. from connected actions in a foreign country. The connected action in Mexico that will have direct and indirect environmental impacts in the U.S. is Sempra Energy's proposed Energia Sierra Juarez wind energy project (ESJ-Mex).

504-1

The ESJ-Mex industrial energy project includes a 700,000-acre general project area and proposes the construction and installation of up to 1,000 wind turbines, 900kms of roads, substation(s), transmission lines, and maintenance facilities. Mexico's environmental ministry, Secretaria de Medio Ambiente y Recursos Naturales (SEMARNAT) granted the wind project a conditional approval. The approval's legal standing is tenuous at best and subject to legal challenge. It is in fact a request for additional information disguised as a conditional approval. SEMARNAT attached sixteen (16) conditions to the approval, ten (10) are evidence of fundamental deficiencies in the environmental assessment submitted by Sempra's ESJ-Mex. It is clear that the document analyzing the environmental impacts for the ESJ-Wind would not meet CEQA or NEPA standard. This is a critically important fact because all of the energy generated by ESJ-Mex is destined for California. The California Public Utilities Commission shall not be permitted to authorize any ESJ-Mex power purchase agreements because the Mexican sited projects do not meet CEQA standard. If the Presidential Permit application is approved, it would in effect be approving a transmission line to nowhere in violation to the public interest.

1

**RESPONSE TO 504-1:** The "public interest" issue is outside the scope of the environmental impact analysis, but, as alluded to by the commenter, will be considered in the course of reaching a decision on whether to issue the Presidential permit. Refer to the response to comment 101-1 for further discussion of the scope of the EIS as it relates to the applicant's purpose and need. As noted before, DOE has no jurisdiction over the proposed wind project in Mexico. Impacts in the U.S. resulting from the wind development in Mexico are addressed in appropriate subsections of Section 3 and are included in the discussions of cumulative impacts in Section 5.3.

504-2 | The ESJ project and connected actions in Mexico will result in harmful impacts on the U.S. Federally listed Peninsular bighorn sheep. Bighorn sheep populations require wide tracts of land in order to maintain meta-population genetic connectivity, and provide food and water. Critical lands have been identified on both sides of the border in the Jacumba/Jacume region. The ESJ Draft Environmental Impact Statement identifies critical habitat and known populations as being 2-miles away from the project site. Recent sightings and photographs of bighorn sheep in the ESJ project area seriously call in to question this conclusion. Additionally, connected actions in Mexico (ESJ-Mex) will impact U.S. bighorn sheep populations due to a decrease in genetic diversity, decreased habitat, and a loss of critical migratory pathways.

504-3 | The Jacumba/Jacume region along with the Sierra Juarez mountain range are known habitat for federally protected bird species and serve as a critical migratory bird pathway. The region is the historic habitat of the California condor. Current conservation efforts are succeeding and therefore the inevitable extension of habitat will include the region. The region is also known habitat for federally protected Golden and Bald Eagles. Wind turbines and electrical transmission lines are known hazards to eagles, condors, and other raptors. This is especially true for juveniles who are attracted to new structures within their ranges and habitats. The environmental assessment submitted and approved by SEMARNAT failed to adequately account for internationally listed avian species, migratory pathways, avian impacts, or international treaties (Migratory Bird Treaty Act and the Bald and Golden Eagle Protection Act). A Presidential Permit should not be granted to the ESJ project when fundamental connected actions in Mexico have not been fully vetted and will result in serious impacts on U.S. species that transcend geographic boundaries.

504-4 | The ESJ project described in the Presidential Permit and its connected actions will severely and negatively impact a globally recognized biodiversity region. Habitat fragmentation due to ESJ and its connected actions will result in the breaking up of natural habitats into small isolated patches. The creation of small patches produces edge effects whereby ecosystem processes begin to breakdown. The probability of wild fires will greatly increase.

504-5 | Finally, it is important to recommend project alternatives such as the deployment of in-basin decentralized renewable energy, i.e. solar. This would move forward President Obama's goals of creating new domestic jobs, decrease dependency on foreign energy sources, and effectively eliminate harmful impacts to the region's extremely valuable wildlands and wildlife.

Sincerely,  
Aaron Quintanar

**RESPONSE TO 504-2:** Response to comment 108-7 provides additional discussion of Peninsular bighorn sheep population, migration patterns, and migration corridors. DOE's March 8, 2011 letter to USFWS indicates the outcome of consultation with the USFWS, including consultation on potential impacts of the ESJ U.S. Transmission Line project on Peninsular bighorn sheep. This letter is added to EIS Appendix C.

**RESPONSE TO 504-3:** DOE did not find any further information in available literature that indicates that the ESJ U.S. Transmission Line project is located in a known bird migration corridor. The EIS now contains a more robust analysis and discussion of impacts in the U.S. to the local area population of golden eagles, as well as updated information related to studies of California condors by the San Diego Zoo in Section 3.1 of the document.

**RESPONSE TO 504-4:** Refer to response to comment 401-14 for a discussion of the project's potential effects on regional conservation initiatives. Cumulative impacts related to fire are discussed in Section 5.3.9.

**RESPONSE TO 504-5:** As is explained in text added to Section 1.5.1.2, distributed energy alternatives, such as small scale solar panel applications in urban settings and other types of electrical generation, are outside the range of reasonable alternatives analysis because they do not respond to DOE's purpose and need.

Thank you for the opportunity to comment on the Draft Energia Sierra Juarez U.S. Transmission Line Project. We understand the DEIS was an action on the part of the DOE in response to an ESJ-U.S. request for a Presidential permit because the project crosses the U.S.-Mexico border. After reading parts of the substantial DEIS for this project, we have comments to offer for consideration.

505-1

Briefly stated, we support Alternative 1 - No Action, and recommend the DOE not to issue a Presidential permit for the ESJ U.S. Transmission Line so the line would not be built. We are recommending this action because we believe it is not in the public interest based on the cumulative impacts that were identified with regard to visual and biological resources, recreation, and fire and fuels management. We disagree with some of the conclusions in the DEIS, and offer some of ours for consideration.

#### VISUAL RESOURCES

The DEIS states,

"With regard to visual resources, the combined presence of the actions considered in the cumulative analysis would result in an increase in industrialization of the landscape, diminished visual quality, and an increase in visual contrast in eastern San Diego County and western Imperial County. The combined size and character of introduced structures associated with each action would result in considerable structure contrast, view blockages, and skylining in the region and could cumulatively cause long-term, major impacts to the existing visual character of the region."

We disagree with the conclusion in the DEIS that because the ESJ U.S. Transmission Line project would be a relatively small contributor to the cumulative impacts to visual resources when combined with the impacts of other past, present and reasonably foreseeable future actions in the area, that it would then be considered a minor but long-term impact.

505-2

Although it is true the transmission line itself is only 0.65 miles in distance on the U.S. side of the border, it SETS A PRECEDENCE with the purpose of connecting with transmission to be built in Mexico. Thus, it will be the first cross-border transmission line and will open up numerous opportunities for Mexico to build large-scale wind turbine projects that will connect to it. The ESJ Wind project Phase I wind turbines will be located only 0.7 mile south of the U.S. border. There are already other future phases for large-scale wind turbine projects proposed that will also be built in the Sierra Juarez Mountains in Mexico. In our opinion, the purpose of connecting to these large-scale wind turbine projects in Mexico AND its implications must be taken into consideration. The ESJ U.S. Transmission Line will be a MAJOR contributing factor as the FIRST LINKAGE TO A HUGE CHANGE IN THE VISUAL CHARACTER OF THE REGIONAL AREA because it will facilitate future large-scale wind turbine projects that will be built in Mexico. Together, these projects could result in a MAJOR INCREASE IN THE INDUSTRIALIZATION of the landscape and affect people residing in or visiting the area for recreational activities in both the U.S. and Mexico.

The ESJ Wind project Phase I could consist of up to a maximum of 52 wind turbines that would be built in Mexico.

The DEIR states,

**RESPONSE TO 505-1:** Refer to responses below.

**RESPONSE TO 505-2:** The project's potential contribution to cumulative visual impacts is discussed in Section 5.3.2. The discussion of cumulative impacts to visual resources has been updated and expanded to provide more explicit acknowledgement of the magnitude of the cumulative impacts on visual resources in the project vicinity and of the contributions to this impact from the ESJ U.S. Transmission Line project.

DOE is considering only this single Presidential permit application in this general vicinity; there has been no proposal of a larger program of cross-border transmission between Baja California, Mexico, and the U.S. Any future requests for cross-border transmission projects, whether here or elsewhere, would be reviewed separately as an entirely new matter. DOE's decision on this permit would not predetermine or set a precedent for decisions on any other applications that DOE might receive.

**RESPONSE TO 505-3:** As is explained in text added to Section 1.5.1.2, distributed energy alternatives, such as small scale solar panel applications in urban settings, are outside the range of reasonable alternatives analysis because they do not respond to DOE's purpose and need.

505-2

"Wind turbines constructed in Mexico as part of the EJS Wind project would be visible from several U.S. locations, including locations in or near the communities of Jacumba and Boulevard; Interstate 8; Old Highway 80; Anza Borrego Desert State Park; and BLM-administered lands, including Table Mountain (ACEC), Jacumba Wilderness, and certain lands in the Yuha Desert."

"Predicted visual impacts from wind turbines in the U.S. would be moderate to high for viewers at observation points in Jacumba and Table Mountain ACEC. and low-to-moderate for viewers at an observation point on Interstate 8. During clear weather, aviation safety lighting on wind turbines (if lighting is required by Mexican agencies) would also be visible from viewing points in the U.S."

"Future phases would increase the number of wind turbines in Mexico."

"These impacts are unavoidable, major and permanent. NO MITIGATION IS AVAILABLE to reduce the impact to minor levels short of relocating the project to an entirely different location."

The specifications for the wind turbines according to the DEIS, are:

"The total height of the combined tower structure and rotor blades would likely be up to 431 feet. The rotor diameter could be approximately 333 feet. The total distance from blade tip at the six 'o clock position to the ground surface would be at least 97 feet. Up to approximately 30 percent of the wind turbine units would be lighted."

Unfortunately, the U.S. cannot mitigate the adverse impacts from the ESJ Wind project that are UNAVOIDABLE, MAJOR, AND PERMANENT to a minor level. The project is located in Mexico and outside U.S. jurisdiction. If the U.S. does not have control of the adverse impacts from this project or any other future large-scale wind turbine projects to be built in Mexico to our visual and biological resources, or any other issues that arise when building them adjacent to our border with Mexico, we should not build this line to connect with their line. In our opinion, this is not in the public interest and one of the reasons we recommend Alternative 1 - No Project.

As for our opinion of large scale wind turbines:

**WE DEPLORE THEM BECAUSE WE CAN'T IGNORE THEM!!!**

505-3

These types of large-scale wind turbines are an eyesore. They are gigantic and have monstrous fan blades that rotate 'round and 'round, have red lights that blink off and on at night, and are noisy. They also have a myriad of other adverse impacts, especially on bird and bat populations. They are not eco-friendly and not "green" energy. The wind turbines located on the Campo Indian Reservation have already had malfunctions. Under certain conditions, they could potentially be an ignition source for a catastrophic fire if a Santa Ana condition with strong winds was present and a malfunction occurred. These gigantic structures and associated infrastructure would be hazards to aerial firefighting.

There are better renewable energy sources such as small solar and small wind that can be

505-3 | located onsite where the energy is used eliminating the need for mega wind farms in the backcountry of either the U.S. or Mexico. It would not be necessary to build the miles and miles of auxiliary infrastructure associated with them that ruin the visual resources if we use these other sources of renewable, onsite energy. For example, the BLM uses solar energy to pump water into its reservoirs at Cottonwood Campground in McCain Valley. The County of San Diego just established an ordinance for small solar and small wind that we support.

RECREATION

The DEIS Summary states,

“To the extent that distant views of the surrounding landscape are a valuable component of recreational use of the region, then any diminishment of this character is considered an indirect and potentially major impact to recreational resources. Accordingly, once operational, the ESJ U.S. Transmission Line project structures, in combination with the other actions considered in the analysis, would result in indirect impacts on recreational use of BLM-managed lands.”

We again disagree with the conclusion that the ESJ U.S. Transmission Line would have a minor but long-term contribution to the major adverse cumulative impact on recreational users like us in the region. The DEIS states the effect would be minor because the transmission towers would not substantially change the character of the views from these areas due to the tendency of transmission towers to blend in with the surrounding desert landscape when viewed from a distance because the new towers would be substantially similar in appearance to the existing SWPL transmission towers. But, as the DEIS also clearly states, ANY diminishment is considered potentially major.

505-4 | The Bureau of Land Management, Anza-Borrego Desert State Park, County of San Diego, and the Sawtooth, Carrizo Gorge, and Jacumba Wilderness Areas and Table Mountain (ACEC) have many recreational opportunities to enjoy and experience in this regional area. We like to hike, jeep, camp, star gaze, take photos of animals, birds, wildflowers, waterfalls, landscape features, etc. while frequently visiting here and have done so for decades. Some of the existing transmission towers and lines already adversely affect our ability to view or take pictures of the surrounding landscape when we do the things we like to do out here because of their scale. (Please see attached photos.) In reference to this project, the proposed towers and lines would be similar to the existing ones and be seen from numerous surrounding recreational destinations people like us visit specifically for the VIEWS they offer.

Transmission towers are tall, linear, unnatural, structures. Many times their powerlines have brightly colored orange and white balls attached to them, as they do in this area, so they show up better for border patrol personnel to avoid when pursuing illegal border crossers by helicopter. Some towers have red lights on top at night and, in some areas, even the lines hanging between them have lights on them. Some lines form unnatural scallop patterns that go on for as far as the eye can see, snaking all in a row over ridgetops and through valleys. Some of the lines are even rainbow-colored now. Some lines glint in the sunlight and rivers of shining steel seem to “flow” over the landscape when observed at some locations, especially at sunset. When located near ridgetops, skylining occurs and the tower design and attached lines with balls hanging on them are obvious. When taking pictures of the landscape while

**RESPONSE TO 505-4:** The EIS at Section 3.2 describes the visual resource setting and acknowledges the industrial nature of the proposed transmission lines. The EIS discusses the potential impacts to the viewshed from several key observations points, including views toward the proposed transmission lines from recreation areas. The discussions in Section 5.3.2 and 5.3.4 regarding cumulative impacts to visual resources and the resulting cumulative impacts to recreation have been updated and expanded to provide more explicit acknowledgement of the magnitude of the cumulative impacts and the degree to which the ESJ U.S. Transmission Line project would contribute to these impacts. The transmission line “buzz” described in the comment is sound resulting from the corona effect. Section 3.6.2 includes assessment of corona sound impacts from the ESJ U.S. Transmission Line project and Section 3.4.2 acknowledges the potential for corona sound to diminish the recreational experience.

Volume 3  
Comments and Responses

---

505-4

hiking at ground level, towers interfere with the subject to be photographed, whether near or distant. When seen from above, their lines disrupt the continuity of the natural landforms and can visually dissect it. They can also "buzz". Adding ANY more towers and powerlines only diminishes and devalues the VIEW and intrude upon the outdoor experience of being in a rural, open space area which is one of the main reasons people like us come to visit the area.

The BLM highlights the views in the area on its website. Two of the three reference books we use when coming to this area are Jerry Shad's, "Afoot and Afield San Diego County" and Lowell and Diana Lindsay's "The Anza-Borrego Desert Region".

Jerry Shad's book states, "East of Jacumba, pressed against the California-Baja border, lies a series of scenic peaks and valleys in the Jacumba Mountains affording vistas of two counties and two nations. Although American mapmakers consider this rugged area to be a part of the Jacumba Mountains, it is more closely associated with the 100-mile long Sierra Juarez, Baja's northernmost link in the chain of Peninsular Ranges." He describes a hike to Blue Angels Peak and the border marker nearby, among others. He states, "Blue Angels peak, one of several crags along a high north-south ridge spanning the two Californias, happens to be the highest point in "Alta" California within 6 miles of the international border." People who hike on this particular trail or the surrounding high-elevation peaks nearby would be negatively affected upon looking west while viewing the proposed project in its valley setting because it is adjacent to this public area. Referring to Valley of the Moon, Jerry Shad's book states, "Strolling through the aptly named Valley of the Moon, you might think that a square-mile patch of Joshua Tree National Park has been magically transported there - minus the famous Joshua trees. Ponderous outcrops of granitic rock, seamed with horizontal and vertical cracks, ring the valley. Old four-wheel-drive trails meander amid the statuesque boulder heaps on the valley's south side. Photographers should be here early or late in the day, when the sun bathes the stone battlements in warm light, and crisp shadows march across the valley."

Lowell and Diana Lindsay's book states, "South fork of Boulder Creek. Enticing destinations for hikers, riders, and backpackers just ahead include the Elliott Mine, Valley of the Moon (headwaters of Pinto Canyon), and the Jacumba Wilderness. It just doesn't get any better than this for training and practice in orienteering, map and compass work, and GPS because of the abundance of named checkpoints, known in Baja Spanish as "picachos," in all directions: Quirk, Gold, Tahe, Blue Angels Peak, Whip and Nopal. After a hard soaking rain, many of the little creeks in Valley of the Moon flow with water."

We have hiked and jeeped in this part of the regional area several times in different seasons, along with our children when they were growing up and still do, and it's as incredible as they say it is, especially Valley of the Moon! Once you get back into these places, modern-day technologies disappear from the landscape and the outdoor experience takes over.

Lowell and Diana Lindsay's book states, "The old mining roads visible to the northwest (left) climbing up onto Table Mountain, are closed to vehicles now but offer excellent hikes with superb views from the 4000' summit" We have seen the views from this public area in the past which is directly north of the project site, and they would be adversely affected when looking south down upon the project site in its valley setting.

The DEIS states,

"The transmission line would encroach upon the views and compromise the integrity of the largely intact desert setting, but the overall change to the views from recreation areas would be low."

Another related adverse visual action mentioned in the ESJ DEIS that would compromise the integrity of the largely intact desert setting of the project site besides the presence of the transmission line itself is the damage to the land to build it. Land scarring from clearing land of vegetation/habitat for wildlife for the ESJ Transmission Line is approximately 10 acres and will remain that way permanently for the life of the project for fire prevention purposes. In addition, the ECO substation switchyard will destroy another 74.3 acres, and another 14.5 acres will be annihilated by the SWPL Loop-In. The total amount of acres to be cleared and have cumulative adverse impacts by these three projects is approximately 100 acres!

The two other projects mentioned above to be considered that are connected with the project would also have tall structures and lines that would be viewed from high elevations in the surrounding recreation areas.

Our favorite regional area to visit here is one of those included to be considered: McCain Valley where the Tule Wind project is to be located. In his book, Jerry Shad describes this area: "The area between County Highway S-2 in the south end of Anza-Borrego Desert State Park and the BLM's McCain Valley Resource Conservation Area constitutes some of the most wild, beautiful, and serene territory in San Diego County. With the exception of a few hunters chasing game in certain seasons, the east margins of McCain Valley Resource Conservation Area are essentially hikers' domain." That description is true and is what lures us to McCain Valley and the three Wilderness Areas located in this regional area.

Additionally, the transmission line continues on into Mexico for a greater distance than the portion located on the U.S. side. This continuation of the line over the U.S.-Mexican border, with or without the ESJ Wind project Phase I figured in, would still need roads and electrical substations to support it in Mexico as it does in the U.S. The amount of total acreage for this part of the project that will also cause land scarring from clearing and will be viewed from high elevations in the surrounding public recreational areas in the U.S. are not included. There will also be adverse visual impacts when viewing vehicles and personnel in the area when they do maintenance work.

In our opinion, a short distance of transmission line can still have an INDIRECT AND MAJOR ADVERSE CUMULATIVE IMPACT on recreational resources and its users, like us, depending on where it located and is being viewed from: both near and far, or at ground level or high elevations, along with the associated land scarring in a largely intact desert setting. These impacts increase even more when considered with the ECO substation switchyard and SWPL Loop-In projects, connected projects in Mexico and the regional area. Our previous comments on large-scale wind turbines in Mexico under Visual Resources would also apply here. The industrial structures in this area already intrude upon and DIMINISH THE CHARACTER and affect recreational users like us. We need to "draw the line", not build this line, or ANY more in this area.

#### BIOLOGICAL RESOURCES

We are concerned for all the wildlife and vegetation to be destroyed by the ESJ U.S.

**RESPONSE TO 505-5:** Response to comment 108-7 provides additional discussion of Peninsular bighorn sheep population, migration patterns, and migration corridors. DOE's March 8, 2011 letter to USFWS indicates the outcome of consultation with the USFWS, including consultation on potential impacts of the ESJ U.S. Transmission Line project on Peninsular bighorn sheep. This letter is added to EIS Appendix C.

505-4

505-5

Volume 3  
Comments and Responses

---

505-5

Transmission line, ESJ Wind, and by all the other associated projects under consideration in this regional area. More specifically, we are concerned with one terrestrial and two groups of avian species identified in the DEIS: the bighorn sheep, and the raptors and bats.

Local residents claim that in the past they have observed bighorn sheep roaming around and foraging in the area where the ESJ U.S. Transmission Line will be located. Bighorn sheep are also known to roam and forage in the designated critical habitat only two miles east of the project site. There are two websites on Google that people display photos of bighorn sheep: Hwy. 8 below the Desert View Tower and the Goat Trestle located near the Motrero Palms. However, try as we might, we have never been fortunate enough to have seen any in this area, but have seen some in other areas of the desert.

The DEIS states,

"The designated critical habitat and known populations of the Peninsular bighorn sheep are approximately 2 miles from the project site; thus, project construction would not affect the designated critical habitat for this species. However, vegetation clearing within the right-of-way and the main access road would result in permanent impacts to potential forage material for this species."

We assume that if clearing the land would result in permanent impacts to potential forage material for this species, then it was considered possible for bighorn sheep to potentially be in this area to forage. Bighorn sheep roam around and forage at will according to their environment and seasonal changes, as all wild animals do, and the ESJ U.S. Transmission Line would reduce the acreage for them to do so and intrude upon its largely intact desert setting.

The DEIS also states,

"In addition, the construction and operation of the wind facilities, coupled with elevated levels of human activity from workers and visitors to the wind farm, could alter wildlife behavior, including possible avoidance of the area."

When referring to the Table Mountain ACEC nearby, Lowell and Diana Lindsay state in their book, "Noteworthy species include the Peninsular bighorn sheep, the golden eagle, and the mule deer."

On the BLM's information board at Cottonwood Campground in McCain Valley, an informational paper posted on the Sawtooth Wilderness Area states, "Historically, Peninsular bighorn sheep made their home here, and today's transient sheep use the area." Another paper posted alongside it on McCain Valley states, "East of the valley, in several steep canyons, oasis of native fan palms are found. These islands of vegetation provide habitat for many desert species, including a population of Peninsular bighorn sheep."

Jerry Shad's book states, "The palm-lined canyons known informally as "Four Frogs" and "Jacumba Jim" lie in the heart of the BLM's Carrizo Gorge Wilderness Area, a region whose east boundary abuts a large expanse of state wilderness in adjacent Anza-Borrego Desert State Park. The area supports a sizable herd of bighorn sheep most of the year. During the springtime lambing season, the sheep cross Carrizo Gorge and take up residence in the Jacumba Mountains. It later goes on to state, "This area can be used as an excellent

dry campsite, with a panoramic view of Carrizo Canyon and its many tributaries. Bighorn sheep "beds" (scuffed areas) and scat are common in this area."

We have thoroughly enjoyed hiking to sections of these remote, spring-fed palm oasis mentioned above, and have hiked to many others in the regional area because of the abundant variety of wildlife and vegetation they support. We always keep watch hoping to spot a bighorn sheep because viewing them in their natural habitat is always a thrill to those fortunate enough come across them. It is also exciting for us when we spot deer in McCain Valley. This is another one of the reasons people like us come out here from the cities.

In our opinion, the above sources seem to indicate to us that bighorn sheep are known to roam and forage in areas of the Sawtooth Wilderness Area, McCain Valley and In-Ko-Pah Mountains, Carrizo Gorge Wilderness Area, Table Mountain ACEC, and the Jacumba Wilderness Areas! The ESJ U.S. Transmission Line, ESJ Wind project, and others to be built are located in a part of this regional area and the result would be permanent impacts to potential forage material for this species and activities that would potentially drive them out which would also affect the ability of people like us to view them in these areas. In our opinion, it is not in the best interest of the protected and endangered bighorn sheep or the public to build these projects here.

Regarding the ESJ Wind project on avian species, the DEIS states,

"... but construction of the Phase I wind turbines could impact up to 7,500 acres of chaparral, pine forest and possibly some desert communities in Mexico that may support birds protected under the MBTA.

" Future phases would increase this development footprint and thus potentially increase the impact to birds protected under the MBTA."

The report also states,

"... operation of the turbines could result in the loss of migratory birds and migratory bats that collide with the turbine blades. Migratory raptors, in particular, may be vulnerable to collisions with wind turbines when hunting prey."

The Fact Sheet from the Center for Biological Diversity states, "Wind turbines at Altamont Pass kill an estimated 880 to 1,300 birds of prey each year, including up to 116 golden eagles, 300 red-tailed hawks, 380 burrowing owls and additional hundreds of other raptors including kestrels, falcons, vultures, and other owl species."

Wind turbines are giant, elevated "choppers" in the air. Both migrating and local raptors and bats will have a rotating gauntlet to maneuver around that could have deadly consequences. We have seen local raptors such as the red-tailed hawk, Cooper's hawk, falcons, owls, and vultures use the updraft the mountains provide to soar above and hunt prey along the ridgetops where these large-scale wind turbines will be located. We have also seen bats in the area. The ESJ Wind project, along with the other large-scale wind turbine projects to be built in future phases in Mexico, would comprise an extremely large footprint of the Sierra Juarez Mountains, and could potentially have a wide-spread, devastating impact on some avian species.

505-7 | ESJ has obtained an environmental permit from the Mexican government for the ESJ Wind

**RESPONSE TO 505-6:** DOE agrees that the potential impacts that ESJ Wind project would have on the U.S. are relevant to the DOE's decision to issue the Presidential permit. As such the EIS includes an analysis of the potential impacts of the ESJ Wind project on the U.S. These potential impacts are discussed for each discipline area in Section 3 of the EIS.

Additional analysis of potential biological resources impacts to the U.S. related to the ESJ Wind project has been added in Section 3.1 of the EIS. Refer to response to comment 201-3 for additional discussion of potential biological resource impacts of the ESJ Wind project on the U.S.

**RESPONSE TO 505-7:** DOE agrees that the potential impacts that ESJ Wind project would have on the U.S. are relevant to the DOE's decision to issue the Presidential permit. As such the EIS includes an analysis of the potential impacts of the ESJ Wind project on the U.S. These potential impacts are discussed for each discipline area in Section 3 of the EIS.

Additional analysis of potential biological resources impacts to the U.S. related to the ESJ Wind project has been added in Section 3.1 of the EIS. Refer to response to comment 201-3 for additional discussion of potential biological resource impacts of the ESJ Wind project on the U.S.

With regard to the Mexican permit for the ESJ Wind project, DOE reviewed a partial translation of the Mexican MIA permit (or La Manifestación de Impacto Ambiental, modalidad regional [MIA-R]). The permit requires a

505-7 project because the project is located in Mexico. In our opinion, it would not be in the public interest for the U.S. to approve a Presidential permit for the ESJ U.S. Transmission Line itself or the ESJ Wind project associated with it that would be facilitated by it. Both projects could affect the bighorn sheep foraging areas or drive them away, and the wind project could affect the avian species that currently reside or migrate through here. The full effect on bird and bat populations from the ESJ Wind project and future large-scale wind turbine projects in Mexico are currently unknown, so no mitigation measures currently exist. Again, if the U.S. does not have control of these projects to be built in Mexico, or know the potential adverse affects to our biological resources that cross into Mexico and what mitigation measures would be proposed, we should not build the line to connect to their line.

FIRE AND FUELS MANAGEMENT

The DEIS states,

"With regard to fire and fuels management, the cumulative presence of the overhead transmission lines associated with the actions considered in this analysis would create multiple ongoing sources of potential wildfire ignitions for the life of each respective action."

"Implementation of the Fire Protection Plan proposed by ESJ U.S. would reduce the probability of igniting a wildfire and reduce the impacts of fires when they occur; however, the potential for ignition would remain. Therefore, the ESJ U.S. Transmission Line project would have a MAJOR AND UNAVOIDABLE CONTRIBUTION to this cumulative impact."

"... and creation of a potential obstacle to firefighting."

The last statement above is the most troubling to us about the ESJ U.S. Transmission Line and ESJ Wind projects, along with all the other regional projects, when considering the cumulative impacts these projects will have if a fire breaks out. It means that ANY fire from ANY source, including lightning, could spread out of control because transmission lines and wind turbines would hinder firefighting efforts to contain it, especially by air. The lives of people in the surrounding communities of Jacumba and Boulevard, and on the Campo Indian Reservation, along with the animal and plant communities in the area, could depend on the ability to effectively fight a fire. In our opinion, considering the risk, it is not in the public interest to build these obstacles in this rural setting that could limit our abilities to protect lives and resources.

In closing, we would like to express our opinion that this regional area is SPECIAL, JUST AS IT IS! That's why we come. Industrialization would desecrate its present RURAL CHARACTER and SOMETHING IRREPLACEABLE WILL BE LOST FOREVER! The "Great Outdoors" won't be so great here any more, just outdoors next to massive, industrial structures plastered all over the landscape with lines strung between them. In our opinion, recreation and industrial uses are INCOMPATIBLE.

The present experience to camp, hike, etc. at Cottonwood or Bow Willow Campgrounds, or Anza-Borrego Desert State Park for a weekend, or just to visit interesting places within the regional area for a day to enjoy the unique scenic beauty it has to offer would be GONE, and LOSING IT would QUENCH our desire to come out here in the first place. Our family

baseline study (at least one year) of potential impacts to birds (including migratory species) and bats prior to the operation of the proposed wind farm. If the baseline study shows that birds and bats could be adversely impacted, the permit requires future mitigation to protect or minimize adverse impacts on these bird and bat populations. The EIS is revised to include this information.

**RESPONSE TO 505-8:** Refer to response to comments 306-1 through 306-10 for an updated discussion of fire protection measures that have been incorporated into the project.

**RESPONSE TO 505-9:** Refer to the visual impact assessment (Section 3.2) which acknowledges and describes the scenic resource values of the project area. The project's potential contribution to cumulative visual impacts is discussed in Section 5.3.2.

505-9

was fortunate to experience the wonders of this remote regional area with few modern man-made structures interfering. Will future generations be able to do the same? Public Lands in transitional areas such as these that are somewhat accessible by hiking or by jeep are few and far between in San Diego County. There's a sign posted by the State of California on the Pepperwood Canyon Trail in McCain Valley that reads, "FEATURES PROTECTED. THIS IS YOUR HERITAGE - HELP GUARD IT." That is what we are trying to do.

Sincerely,

Charles and Laurie Baker

**RESPONSE 506-1:** As discussed in response to comment 101-1, comments pertaining to the merits of the project with respect to federal energy policy and California utility regulations are outside the scope of the NEPA process. DOE will consider these comments as well as all other comments received in this proceeding before making a final determination on the permit application.

November 5, 2010

U.S. Department Of Energy/ thru San Diego County Department Of  
Land Planning & Land Use

Re: Request for Commentary – Sunrise Powerlink

This commentary is submitted by D.E. Páez-Ramírez, as county resident, and in representation of development and supervision of 1,000 + acres of land in Baja California, a substantial portion of the territory dedicated to alternative energy production and electricity transmission.

Comments are in response to the county department’s request for public comment on SEMPRAs proposed project to obtain land by grant from the county of a right-of-way for transmission of energy: Sunrise Powerlink.

A residential challenge has been raised objecting to use of San Diego county land, privately held, from willing contribution of rights-of-way by purchase in counter to the utility provider’s claim that the land is essential to county and state residential interest, and that it’s available by no other means than by eminent-domain mitigation for a grid construction it proposes.

If the Imperial Valley production of electricity is truly the only possible source of renewable energy required by the state then yes a transmission line spanning the southern portion of the county is the sensible path.

If the generation source of itself characterized in proposal as a priority issue, is potentially misrepresented, construction of a grid to accommodate that power’s conduction would render main point of request inequitable and not suitable to approval.

The report here submitted respectfully recognizes the DOE’s insistent instruction that assent to the assertion by SEMPRAs, and SEMPRAs Generation, of the sourcing – of the energy production location – as being correctly far-distant in access be taken as a premise, that it is not part of a “connected action”, and that commentary restrict itself as to opinion affecting construction of the Power Link only.

506-1

For reasons to be outlined, I assert that the instruction is premature and the underlying assumption of the necessity of the route through the county should be again subject of further consideration to avert a potential misstep which by certain applicable NAFTA law may indicate appeal as recourse. It is within both county and DOE purview to regard NAFTA intentions. A reading of the commentary in report shall explain this assertion.

This report maintains that the county, deliberating construction of a 123 mile conduit, cannot in good faith dismiss as out of its purview, the foundation issue which makes the requirement of the Power Link a requisite.

Is the power production source's characterization and location distance valid, and its conveyance through the county at such an extraordinary length of transmission the only appropriate expenditure of capital funds in bringing electricity to consumers?

506-1

Writing in representation of combined county resident interest, I point out that an alternative source for satisfaction of state requirements, and of residential consumption and use of electricity generated in compliance to dictates of Assembly Bill 32, can be obtained from nearby Mexico and transmitted through already existing grid line between that country and the United States.

Energy generation and transmission across borders in benefit by one country to another on the American continent is implicit to the design of mutual interests contained within the legislative dictates of the North American Free Trade Agreement. The Baja Wind (renamed: Energía Sierra Juarez) proposed project, SEMPRA Generation owned, does not of itself satisfy the greater intentions of NAFTA. The treaty's applicability is cited here.

Respectfully submitted for your attention, the following Report,

{ DEP }

	CONCLUDING REMARKS	

**Re: Sunrise Powerlink**

I state in the letter introducing this report, observation of matters before the department in proposal for consideration by you and the federal government, that a perspective by the county exclusive in merely ratifying the intentions of SEMPRA alone, is perhaps not reflective completely of the better interests of the electorate of San Diego or of the complete logistical issues affecting decision-making, or, in the least, as presented by SEMPRA to the community thus far.

In compliance to a correct supply of energy into the county and state, a legislative enactment, AB 32 , indicates a requirement of state utility providers that they consider entering into Power Purchase Agreements reflecting that renewable resources comprise 20% of their energy sourcing out of electricity generation from renewable resources.

The Assembly Bill does not, though, specify that the utility companies be the sole source of producing the alternative energy required, but that they do enter into fair association compensating them in opening access to their transmission lines for delivery of renewable energy throughout California.

Trans-Pathway HOLDINGS, designated to be a California corporation, intends delivery of energy generated in NAFTA participating country, Mexico, a transmission into California through San Diego county, and delivery of that energy produced to applicable utility and its customers in the state. Our first developments are of a parcel exceeding 1,000 acres.

**I. VOLUNTARY DISCLOSURE – Trans-Pathway HOLDINGS (TPH)**

As premise, it has been shared with principals and friends-to-the-projects that 3 basic foundation points make up our intentions to develop and establish a number of approaches to Generation of Energy From Renewable Sources.

- We will commence production of electricity by Wind power and Solar energy collection on certain portions of Baja California territory, beginning with land controlled by us, located in Mesa de Otay. Those projects are identified as Venture Project-1, and VP-2.

- We intend concurrent and subsequent energy development onto parcels identified and aggregated by us also in B.C., Mexico. We are completing negotiation in purchase of additional parcels along the western coast territory of the Baja California Peninsula – both interior placement of solar collectors and in-ocean placement of Wind turbines. These Acquisition Territories, energy-farms, are to be Venture Project- 3 thru VP- 9.
- The intended roll-out of subsequent acquisitions and energy generation are planned to extend in partnership throughout Mexico, where parcels have been identified, and in allied association with others.

Other U.S. entities hold similar plans of Mexico energy production. We consider our efforts to be of a leading nature because of strong connections and ties to pertinent agency and legislative favorability in Mexico for these initiating developments. And, a favorability for how those developments are keen to enhance and further the energy interests of both the United States and Mexico.

Walter Puffelis Gama, solely and through AC Group, Arroyos Cristal, S.A. de C.V., owns the first parcel of land already within Baja California and as of March, 2010 is entered into a Memorandum Of Understanding (MOU) which joins in collaboration to develop the parcel. Trans-Pathway HOLDINGS, a new company, is slated to be representative entity of interests formulated for associates of David Esteban Páez-Ramírez, a United States citizen; the company completing formation undertaking the developments outlined by the MOU.

## II. SUNRISE POWER LINK

The Sunrise Powerlink is presented by its proponent, SEMPRA, as fulfilling a necessary conduit between energy primarily sourced in the Imperial Valley.

A Department Of Energy (DOE) evaluation has been accomplished in the most pertinent environmental review of what the Bureau of Land Management (BLM) regards as the routes of both the Baja Wind (now Energia Sierra Juarez) connectivity and Sunrise Powerlink; these being separate, land-usage-wise.

We assert though that treaty intention components outlined in NAFTA, though inconsequential to BLM findings, are expected to be influential to a San Diego County assessment as it and the DOE share a different mandate which would integrate concerns as to effect to the continent per NAFTA participation edict.

The county perspective as to approval, or denial, of the Sunrise Powerlink is indeed separate from that of the BLM's more narrowed purview of land usage only. NAFTA considerations are of national and county purview, though. The EIR/EIS already prepared for BLM may not be sufficient to the county's (and DOE's) deliberation (perhaps it's as much a County Board of Supervisors matter) of economic/"Socioeconomic" impact through a wider continent impact consideration. It is the continent, through NAFTA eyes, which points up certain matters of salience for governmental consideration. Here both departments are alerted to elements cited as pertaining.

The DOE, in person of their Office of Electricity Delivery, cites on occasion a determination that some issues lie outside the scope of their impact studies, and are in mission specific activity perhaps correct in that conclusion. Perhaps items designated as being important by this report can be characterized as beyond an evaluation by either the DOE or the county in person of their Department Of Land Planning. But, voicing of public opinion (which is what all call-to-commentary requests accomplish), should that opinion be construed as allowing the department(s) cited to grant request – that construction of the Sunrise Powerlink proceed – would, in the view of this one commentary, interject an activity prematurely when dictates of NAFTA are not being observed.

Defiance of the treaty's applicability could occasion sanctions affecting one particular NAFTA country, the United States, when the treaty is not accorded sufficient attention to its regulations and intentions as legislated.

Elements of the treaty, to which the United States is participant, and in fact to the largest degree initiator, are to be observed within a schedule meaningful to either halt project, or in significant application, at least impose a procedural delay until an appropriate agency – or these same agencies named – adjust deliberations giving weight to the North American Free Trade Agreement.

The grid line proposed by SEMPRA is an ambitious one, fully outlining a commitment to create a transmission line it characterizes as integral and only solution to bring alternatively derived energy from renewable sources into San Diego and California localities applicable to complying with Assembly Bill 32.

The characterization of the Sunrise Powerlink as being integral to the greater interests of the region remains a matter not fully addressed when a discount of NAFTA is considered as occurring.

### III. REGIONAL / COUNTY / STATE / U.S. INTERESTS

Besides the mission perspective entrusted to an overview and supervision by the Department Of Planning And Land Use, general regional matters affecting the constituent quality of life of the county's residents also very much pertains in the department's representation to others outside the county of what it considers the interests of a majority of the inhabitants.

Whether or not the Sunrise Powerlink is a "connected action" – (as defined by 40 CFR 1508.25(a)1) and not completely satisfied by the BLM position, supported by its receipt of an EIR/EIS from the DOE, and in BLM's statements of its approval of the transmission link – is a definition perhaps moot should the Imperial Valley location for production of energy for the county's and state's needs – or even energy delivery through the ESJ sourcing – be inaccurate in SEMPRA's insistence as that location being most logical in its far distance, when this report's commentary identifies closer location in sourcing being that of NAFTA participant country Mexico. And that, at a site adjoined to *Southwest* Powerlink.

We understand that the Southwest Powerlink is characterized as not amply constructed to a capacity in carriage of the energy into the county that a realistic supply of Wind and Solar renewables for a large state would demand. But isn't that a function of political will, to regard – or disregard – a reconstruction of an existing link at a cost substantially less than what is proposed as new construction of a route such as the Sunrise Powerlink? Under a NAFTA influenced rubric a *fait accompli* acceptance that the desert of Imperial Valley, 123 miles to the county's East, is closer than an initiating Baja California renewable energy source 2 ½ miles from the San Diego border, at a more western point of entry, appears misjudged.

This year, the County of San Diego accepted DOE's invitation to be a cooperating agency with that U.S. department. Separate from the DOE Presidential permit application process, both Sunrise Powerlink and ESJ-U.S. have applied to the county for a Major Use Permit (MUP) for those projects, and the county now joins DOE in review of the impacts of such permitting in evaluation, and in accordance perhaps not comprehensively attentive enough to the impact potentials for adjoining countries as contained in NAFTA.

This being a given, according to this report's observation, knowing that a formal MUP will be forthcoming, even cooperative incidental recommendation to the DOE through its verbally recorded sessions by the county is as much a form of

review of the overall energy requirements of the majority of the county electorate (and the entire region) as are the opinions and specific interests of any one segment of that electorate who are to be affected by decisions should a grant of abridgement of rights by one party over another prevail.

There is a qualifying rubric we wish to emphasize: it is that arrival at an equilibrium balancing all interests and prevailing in advocacy of the predominant interests of the majority of all county, and ultimately state, residents – and in this instance, participating NAFTA partners, is key point and of extreme scheduling importance. And yes, if only considering matter narrowly as out of scope of any NAFTA regulation, decision by United States DOE is understood to prevail. But we insist, not to a blanket schedule of finality which will trigger acceptance of request and render an appeal to NAFTA jurisdiction a perhaps onerous situation for the treaty participant, the U.S. This is not in any way our wish.

#### IV. NORTH AMERICAN FREE TRADE AGREEMENT / NAFTA

For quite some time in the 20<sup>th</sup> century, as reported by Sidney Weintraub in his book, *Free Trade between Mexico and the United States?*, it is noted that Mexico was strongly wedded to a highly protectionist set of policies in trade, investment, energy, and other sectoral policies. Weintraub analyzed the pathologies that existed then in the highly restricted bilateral trade between the two countries, Mexico and the United States, examining the until then foregone opportunities that cooperation would likely provide; and, as his book's title implied, recommended a bilateral trade agreement between them and their northernmost neighbor, Canada.

In 1984 the Brookings Institution published the book; in it Weintraub argued that relations between the two countries go well beyond circumstances of asymmetry between a wealthy and powerful United States and a much more insular in wealth and less powerful Mexico. That perceptive, visionary and quite contentious analysis resulted in what would become articulated as a treaty to approach benefiting the entire northern areas of America – Canada, the United States and Mexico. And for purposes of issue in our present review, NAFTA is expected to influence governmental decisions by counties, here in overview by DOE, at borders representing one of the countries named in treaty as participant.

The book's findings and recommendations became one of the bases for ratification of the North American Free Trade Agreement, NAFTA.

I encourage the county, its land use department, and the DOE, to consider deliberation of the Powerline proposal in light of the treaty and its legislative elements which in turn encourage very broad perspectives by all government entities reviewing how NAFTA applies and how it guides evaluations which are to benefit all countries of the continent, Mexico and the U.S, here in particular.

How does such a broad philosophy exact attention by a sole county such as San Diego in 2010? Well, most primarily the NAFTA agreement has been given short shrift by counties such as San Diego bordering the countries precisely legislated to exact willing cooperation beneficial to their involved interests; this can change.

The Fed will be supplied by the county with a concluding answer as to the aggregate opinion of residents, and its own upon read of DOE report. And, how such perspectives reflect the matter of approving – or denying – a multi-million dollar expenditure – yes, at first phase put forth out of discretionary budgets held by the proponent, but eventually of energy consumer funds – towards construction proposed and characterized in proposal as eminently necessary.

Yet if the county, cognizant that it is more so a multitude of elements which involve themselves interdependently within the interactivity and welfare of its constituents, and which most influentially affects all weighted elements of land use and land planning, then who else as agency is a populace to imagine making decisions in its better interests if not the department and its project managers? And eventually the DOE itself.

What is pointed out is that more than just mere narrow perspective is required of the county when deliberating its position in reference to the Sunrise Powerlink. A report purporting to take into consideration the full county's land planning interests should take into consideration the full county's land usage interests within the broad scope of how all of a county's critical elements affect residents.

NAFTA, over the years, has generated a sunny set of hopes and a thunder storm of fears. This report encourages the region, in the bodies of the San Diego County Department Of Land Planning & Land Use, and the Department Of Energy, to themselves not fall prey too readily to myths and misrepresentations which malign the region.

And it is encouraged that the department(s) not so readily embrace the interests of one constituent over another when a wider review of positioning in the Americas indicates that the existing NAFTA partnership is as relevant for the

county's attention as the request by the U.S. DOE that it report the energy opinions of 'region's' residents using only a narrow perspective as to regional issues. NAFTA is a treaty affecting the economies of the entire continent.

The DOE is encouraged to portray its observation of the area in ready embrace of NAFTA economic growth potential. After all it is the region in its expanse – both U.S. and Mexico – which is affected by a common share in the economic implications of environmental concerns: clean water, clean air quality, clean energy and the reduction of pollution everywhere in the sector where a United States citizen is breathing essentially the same air as its Mexican neighbor. Second hand smoke analogies unfortunately too appropriately come to mind.

There is economic as well as environmental cooperation to be pursued.

The hopes in balance to the fears which a 3-prong linear extension of country interests, Canadian, U.S. and Mexican is what lends cohesion to the region's viability within a global commerce perspective. This is the cross-border perspective still held by an international investment community inspecting the potentials of interactivity at the continent's three land defined borders.

NAFTA lends our two bordering countries of the Americas a perceived muscle when viewed by the world as committed economically and efficiently – prepared mutually to engage business independently but interactively on the international scene. NAFTA is what the DOJ and county are asked to employ as instrument to sift meaningfully through the deliberation process presently before us. Cooperation regionally is what is asked of our decisions.

In origination of the treaty, Mexicans hoped that their country would rise to the first world; Canadians hoped that the agreement would compel the United States to comply with dispute-settlement mechanisms; and the United States hoped that NAFTA would put an end to undocumented migration from Mexico.

None of these hopes came true – immediately. They remain on hold; the recovery from economic crises provides plausible cover for now. But the opportunity still exists for agencies of the governments of all three countries to, when the opportunity emerges, as it does now, to extend into a serviceability intended by the treaty agreement. Here we encourage you to lengthen your viewpoint of landscape and see the wheel of interdependence in the county and Baja California yearning for a sanity employable on both sides of the border equation.

Growth potential for the San Diego/Baja California region will miss its opportunity to increase meaningfully if the Sunrise Powerlink is afforded an approval which designates it as earning a significance which obviates the *significance* of a wider interpretation of what is region.

Mexico is just starting again to be viewed as a partner on the continent. The United States and its American attractiveness is the main foreign destination for Canadian and Mexican tourists, representing more than half of all visitors to the United States in the past two decades. At the same time, more than half of all Americans who venture abroad go no further than to our NAFTA neighbors.

In 2007, 19 million Americans visited Mexico, and 13 million visited Canada. Nearly 18 million Canadians and 14 million Mexicans visited the United States. A similar number of Mexicans proportionately - legal and economically viable Mexicans - as the number of Americans. These are welcome, NAFTA intended, tourists flowing correctly across their respective borders.

#### V. INTERNATIONAL POSITIONING

Internationally, the regional picture now even more requires that our three countries make more robust the originating intentions of NAFTA. Only direct regional extension of perspectives which will take into account the nature of constituencies being, yes, the actual populations inhabiting any one country's land area, but, also in broadening of perspective to encompass the possibilities for growth of a sister nation and its economic interests.

The nation states of Europe have evolved to still maintain their cultural singularities and independence, yet economically the world's investment community perspective is that they are also interdependent. The establishment of the European Union and interchange of Euro currency indicates initiation of that.

North American integration can be said to have stalled because China joined the World Trade Organization in 2001, and its exports to all three North American countries soon overtook the interests of the organization's other members. Interdependence between Canada, Mexico and the United States has taken a diminished position for a decade but is that always to be so?

Just as important in deliberation is that is this solely China's fault? The NAFTA countries are looked upon to lead the continent; the world expects a healthy emergence of a strong America - the entire continent not just one country

nicknamed *America*. Wouldn't China benefit as well in the global scheme when the entire north American corridor bolstered its interdependence into a strong, coherent economy respectful to the territory usage interests of them each?

A robust growth in earning power for the populace of one country can readily improve the same growth for the citizenry of all three. Expansion of job creation means increase of buying power which affects the boost in acquisition of goods flowing internationally.

All this is inherently possible when inspecting the framework of a treaty introduced ten years ago and primed to perhaps be a keystone in making decisions that benefit us all. NAFTA is not an ancient dream. It can be the port in a confounding storm situation confusing too many at present. It is applicable.

NAFTA guidelines are legislated; its regulations – its intentions – yet have teeth. The consequence of ignoring NAFTA all these years has resulted in the decline of intra-regional economic cooperation as a percentage reduction of North America's commercial relationship with the world. What is a country to do?

#### VI. NAFTA APPLICABILITY

Once it was Mexico which was strongly wedded to a highly protectionist set of policies in trade, investment, energy, and other sectoral policies.

The county of San Diego is now, in the person of its Department Of Land Planning & Land Use, and finally the Department Of Energy, at risk for being too narrow in interpretation of its duty as being to report only 'raw dirt' energy commentary when considering the county's complexity of diverse opinions relative to the quality of life imbuing the spirit of energy use regionally. Energy is of issue for entire region.

The county – the departments – are called upon to not so readily accede to only one constituent's notion of what energy compliance, energy production interest, and energy provision state-wide means to all constituents. All regional constituents. Mexico cannot plan wisely until signal is given that something of economic benefit is meaningfully sparked at the border. Let's give that signal.

For us to perpetuate the deliberation pathologies that existed pre-treaty, back into a highly restricted bilateral commerce between the two NAFTA countries,

would signal a deplorable inspection of the opportunities before us. This would not result as the logically best course should that road be taken.

"Even if you are on the right road," parenthetically Will Rogers once said, "if you decide only to sit yourself down - you will be run over."

#### VII. PRESIDENTIAL PERSPECTIVE

Holding fast to a vision of an across-the-border effort to allow billions of dollars of energy to flow to the United States, one prominent U.S. politician traveled to Mexico to emphasize what was at that moment - and still prevails now - a dire need to stabilize an access to energy for the citizens of the U.S.

He was quoted as saying, "The quickest way to have impact on the energy situation is for us to work with Mexico, and a certain extent Canada, to build a policy for the hemisphere." He continued by saying, "We need more product, and it doesn't matter where the product comes from."

Those exact quotations come from reports in the media February 12, 2001. The visionary politician quoted was President George W. Bush. The comments are energy wise, the remarks seven months before events of 9/11 changed the complexion of international interaction—before bolder implementation of NAFTA.

But, still, the recovery which will meet American business efforts in the next upturn, expected in the next few years, will rely for its stability upon decisions made in these very months in all sectors critical to national growth. And in this case, growth of prestige for a continent. This report advises the county, and the DOE, to enter a cooperative campaign to strengthen all NAFTA enacted attempts to grow the region abundantly. It is this region's keen opportunity.

An access to clean energy - not just any energy - for citizens of both the United States and Mexico is one step in the right direction. It can start with a county at U.S./Mexico border making an energy decision not to immediately allow building of a transmission line narrow in Xenophobic view of a region as being only one country's domain, only one side of a border.

Having only one country and its favored utility to dictate what constitutes the sourcing of the renewable energy to a degree of funding demanding that a new transmission line be requisite for its very existence - is perhaps unnecessary.

Perhaps it is good, though capital intrusive, to be aware that when an agency discounts the broad remedies available through the formulas of a treaty, that this particular treaty, NAFTA, provides its own court for appeal in recourse should remedies by any one nation too narrowly decide matters affecting potential in benefit by two commercially engaged – linked – countries.

Perhaps more enlightened agency minds can perceive benefits for dual NAFTA interests hovering validly on the horizon? Presently, how else could such a treaty be interpreted? NAFTA exists as congressional, and presidential edict.

The treaty has already been designed, the liquidity of its effectiveness has only to permeate the active philosophies of governmental departments affected. This report respectfully notifies the county that present deliberations require that NAFTA influence the present decision-making concerning the Powerlink.

This report emphasizes that a grid exists already between Mexico and the U.S.; Mexico's grid does not yet in general plug into the United States at all points, except for three connections— on the borders of California and Texas.

A decade ago expert observation described the linkage as requiring a re-tuning. President Bush agreed. Perhaps the present administration in consideration of all elements at hand, might too agree. NAFTA remains bi-partisan at its core.

Those grid lines, should the political will prevail, can easily be basis for expansion of capacity. In California I know that yearning for an energy resolution exists. It would be in a utility's better interest, as well as in the interest of the PUC representing the public good to divert attention from creating new linkage and bolstering instead existing connectivity. That, in light of NAFTA.

Land for generation of alternative energy sourcing lies in clear path connectivity between Baja California territory and California residential delivery of electricity, and an expenditure of capital in bolstering an in-place link between the two NAFTA countries of Mexico and the U.S. will cost substantially less than that to be required by construction of the Sunrise Powerlink.

Certain information contained in the text of the section above can be accessed by internet search entering the title as, BUSH DUE TO VISIT MEXICO TO DISCUSS OBTAINING ENERGY, January 12, 2001, *The New York Times*.

#### VIII. UNITED STATES ENERGY SECURITY

When thinking energy, the average American can easily conjure the name, Saudi Arabia. If asked who else might be high on a top ten list of energy friends to the United States' interests you'd be surprised to find Mexico to be right in the top five. In fact, Mexico is consistently one of the top three exporters of oil to the U.S., along with Canada and Saudi Arabia.

On the outskirts of Houston, along the industrial ship canal, is a refinery known as Deer Park. It is the sixth largest refinery in the United States. It produces 340,000 barrels per day; a capacity which makes it a critical refinery for the greater Houston fuels market.

Yet it is likely that few Americans outside of the energy business have ever heard of the refinery or fully grasp the larger linkage between the United States and Mexico that it underscores.

In January of 2010 it was reported in the industry's *Journal Of Energy Security* that for over 15 years Mexico's Petróleos Mexicanos, (PEMEX) has operated a critical piece of the United States' energy matrix – both in terms of crude oil supply and refined products. Yes, Mexico delivers welcomed energy directly into the U.S. on a daily basis. For now though primarily in through Texas.

The U.S. facility is in partnership with U.S. business interests, continually supplies those interests, and is partially owned by PEMEX. And for global understanding – investment perspective – of energy security, this is a good thing.

Again, Mexico is already one of the primary global suppliers of energy to the United States. We at TPP are primed to make a Baja California/San Diego corridor in delivery of electricity derived from sustainable sources – of green energy – just as viable and healthy for a state of California connection as occurs daily in oil sourced product between Mexico and Texas. PEMEX's interior energy generation and its output oil shipped to the US is perhaps the world's most visible manifestation of the Mexico-US symbiotic relationship.

Deer Park is a remarkable two-way street of oil connections between the United States and Mexico – it is a microcosm of a healthy commercial relationship. The refinery offers superb insight into a key international piece of the broader energy security discussion in the United States. Why do we remain so oblivious to this?

IX. SAN DIEGO / BAJA CALIFORNIA

The close proximity of the U.S. market works for oil sourced interactivity at the Texas border, why not also for our San Diego/Baja border?

Why, when this is a DOE advising one NAFTA country, not also a matter of validly supplying renewable energy cross border? At issue is growing largely the economies of both NAFTA countries neighboring in San Diego.

President Barack Obama, while early in his presidency, has pushed hard for a new international profile for the United States on energy and climate issues. Job creation could well be apportioned for robust manufacture of appliances – Wind and Solar – labor for their assembly, installation and maintenance in activity formulas equalized and correct to both NAFTA countries' expectations.

Jeremy Martin, as an author friend-to-the-region, an expert proponent of further cross-country symbiosis between Mexico and the U.S., upon which much of TPH philosophy as to renewable potential at the border is derived, can be produced to advocate that the county widen its range of view to consider all security issues affecting both populations of our region in such a way that does not just narrowly interpret land use and land planning at close of 2010 as a *fait accompli*.

CONCLUDING REMARKS

According to *Oil and Gas Journal* (OGJ), as of January 1, 2010 Mexico had 10.4 billion barrels of proven oil reserves. Is the U.S. to only look to Mexico for oil sourced generation of energy?

A simple car-window assessment of the Baja California landscape will indicate, if only anecdotally, that the sun shines extremely bright in Mexico on a consistent basis. And, certain assessments relate adequate Wind exists on the parcels identified by many of us – not just TPH – for generation of Alternative Energy.

I can only speak from my own experience, but as noted earlier, there are many U.S. entities with similar intentions for NAFTA-creative delivery of energy out of Mexico into California.

Our particular renewable sourcing of energy is poised to generate immediate delivery from a connection point regionally accessed easily, two and a half miles from the San Diego border, directly onto an existing grid.

San Diego County and Department Of Energy is asked to recommend that the request be denied for construction of the Sunrise Powerlink due mainly to the narrow nature of the assertions made in the proposal as it exists presently. Imperial Valley is not the most logical, nor nearest, source of energy, nor is its transmission requiring a new grid be built the logical choice for this county.

**RESPONSE 507-1:** The proposed location of the ESJ U.S. Transmission Line project is entirely on private land.

**Subject:** PUBLIC COMMENT ON FEDERAL REGISTER FW: i oppo0se this project USING PUBLIC LAND AT ZERO OR LITTLE COST TO THE PROFITEER

507-1

I WANT THE PROFITEER IN THIS LINE PROJECT TO STOP USING PUBLIC LAND AT ZERO OR LOW COST FOR HIS TRANSMISSION LINES. THE PEOPLE OF THIS NATION WORKED VERY HARD TO SAVE THIS LAND FOR THEIR CHILDREN. THEY DID NOT WORK HARD AND PAY TAXES SO SOME ENERGY PROFITEER COULD COME ALONG AND DESTROY IT FOR HIS OWN PROFIT. FAR TOO OFTEN THE TAXPAYER CITIZENS AND THE TREASURY OF THE USA IS GETTING RIPPED OFF BY THE PROFITEERS WHO COME ALONG WITH BIG CAMPAIGN DONATIONS AND THEN GET THE RIGHT TO USE PUBLIC LAND FOR DESTRUCTIVE PROJECTS LIKE THIS. THIS PROPOSAL MUST GO THROUGH DEVELOPED LAND AND PAY PRIVATE OWNERS TO USE THEIR LAND. THEY NEED TO STOP USING THE PUBLIC LANDS AS THEIR PRIVATE DOMAIN TO MAKE BIG MONEY FOR THEIR OWN WALLETS. THIS IS NOT WHY USA TAXPAYERS SAVED THIS LAND. SO SOME SLEEZY PROFITEER COULD COME ALONG AND PAY US NOTHING FOR USE OF OUR LAND, DESTROY IT FOR THEIR OWN WALLET ENRICHMENT WHEN WE WANTED TO SAVEIT FOR OUR KIDS. THE PEOPLE OF THIS NATION ARE GETITNG RIPPED OFF. I DONT THIN THE PROJECT SHOULD GO FORWARD IF THIS SLEEZY SKANKY IDEA OF USING PUBLIC LAND IS INVOLVED. LET THESE PROFITEERS PAY FOR THE PRIVATE LAND WHERE THIS PROJECT SHOULD GO. JEANPUBLIC 15 ELMS T FLORHAM PARKNJ0792

FROM: Barbara Broz  
RE: NO to Sempra's plan to outsource jobs

Dear Dr. Chu:

I strongly urge you to say NO to Sempra's plan to outsource American jobs.

Sempra Energy has asked the Department of Energy for a Presidential Permit to construct a cross-border transmission line, known as Energia Sierra Juarez, between Mexico and California to enable the company to import electricity into California from energy projects in Mexico.

Sempra Energy's plan to offshore green energy production to Mexico would result in as many as 15,000 lost U.S. jobs and nearly \$300 million in lost local, state and federal tax revenue. 90% of the direct job losses would occur in Imperial County, California, which had the highest unemployment rate in the nation as of April 2011 at 27.9%.

Sempra's plan is a job killer. This flawed proposal to import energy instead of building projects here undermines President Obama's vision to create jobs. It is the wrong direction at a time when we should be building green energy projects in the state to put Californians back to work.

With construction unemployment at its highest in a generation, we can't afford to outsource even one construction job as Sempra is proposing to do.

Please say NO to Sempra's plan.

Thank you for your attention to and consideration of my view.

TRANSCRIPT OF PROCEEDINGS 10/5/2010

Page 3

1 JACUMBA, CA, TUESDAY, OCTOBER 5, 2010, 7:13 P.M.

2

3 DR. PELL: Good evening. If I may have your  
4 attention, please. It looks like everybody that's  
5 coming this evening is pretty much here, and it's about  
6 7:15 so I think it's about time we start.

7 Let me introduce myself. I'm Dr. Jerry Pell.  
8 I'm with the Department of Energy in Washington, D.C.,  
9 and let me tell you a little bit about myself so you  
10 know who the person is behind the mic. I'm an  
11 environmental scientist. I have been with the  
12 Department of Energy for 34 years, and I've been doing  
13 environmental work of one kind or another for 40 years.  
14 And if you're wondering why I haven't retired yet, it's  
15 because I enjoy what I do and I especially enjoy the  
16 opportunity to come out and meet with you.

17 So I'm really glad to be here. And this is not  
18 my first visit to the area, by the way. I've come out  
19 before. I've toured the project site. I've toured the  
20 local community and generally have a pretty good feel  
21 for the area. In fact, on the way here this evening, we  
22 were early and we toured the project site again on the  
23 way down to the meeting.

24 As I said, I'm an environmental scientist. I  
25 grew up in Montreal, Canada. I got my doctoral degree

CLEAVES & ASSOCIATES (619) 238-1415

1 at McGill University in Montreal, and when I was  
2 applying for graduate work I considered locating to  
3 California because I always had this dream of living out  
4 here and really liked the area, but didn't take that any  
5 further because I was afraid I would be too far from my  
6 family, so I come out to California with pleasure.

7 On my right is Patrick Brown. I will let  
8 Patrick introduce himself. Patrick represents San Diego  
9 County. San Diego County is the cooperating agency for  
10 the Environmental Impact Statement process that we're  
11 here for tonight.

12 MR. BROWN: Thanks, Jerry.

13 As Jerry said, I'm Patrick Brown. I work for  
14 the County planning department. I'm a project manager.  
15 I'm the project manager for basically all the renewable  
16 energy projects in the County. So I'm also the manager  
17 of the East County Substation, Tule Wind project which  
18 I'm sure you're all familiar with.

19 So the County appreciates DOE including them in  
20 this process to do this environmental review and, as  
21 Jerry said, we're a cooperating agency. We do have the  
22 local land use authority over the actual project itself  
23 which is the construction and operation of the  
24 generation-tie lines, so we're actually involved very  
25 deeply.

TRANSCRIPT OF PROCEEDINGS 10/5/2010

Page 5

1 A little bit of my background: I've worked for  
2 the County for over five years in the planning  
3 department. I'm a land use planner. I'm also an  
4 environmental planner and I do project management, so we  
5 wear three hats at the County. I've got a B.A. in  
6 planning from UC San Diego and also from San Diego State  
7 I have a Master's Degree in planning, so I guess I'm a  
8 planner but I'm a project manger now.

9 So anyway, thank you for everybody coming here  
10 tonight. I know it's kind of late and it's on a  
11 workday, but we really appreciate any comment that you  
12 guys can provide, and I'll give it back to Jerry.

13 DR. PELL: Thanks, Patrick.

14 Let me tell you how we're going to do this  
15 tonight. I'm going to give you a short presentation, a  
16 little slide show. You all have copies of the slide  
17 show. We made sure that it was preprinted so that I'm  
18 not going to take very long to read each slide in detail  
19 because you've got it on paper. I just want to go over  
20 a few highlights of why we're here, and I thought the  
21 best way to do that would be a slide presentation and  
22 then we will start the taking of comments.

23 What I'm looking for, Patrick, what we're both  
24 looking for, is comments that go specifically to the  
25 quality of the Environmental Impact Statement with

CLEAVES & ASSOCIATES (619) 238-1415

Volume 3  
Comments and Responses

---

TRANSCRIPT OF PROCEEDINGS 10/5/2010

Page 6

1 regard to its adequacy, its accuracy, and its  
2 completeness.

3           This is your opportunity to help us produce a  
4 better document before we produce the final EIS, because  
5 after the November 1st deadline for the public comment  
6 period we will take the comments we have received from  
7 meetings like this and plus whatever came in  
8 electronically or through the mail and prepare the final  
9 document which will address your comments in our  
10 assessment for the final Environmental Impact Statement.  
11 So what you say is important.

12           This is not a Q and A session. This is a  
13 formal public hearing. We have a court reporter.  
14 Patrick and I are not here to answer questions tonight.  
15 We're here to get your input and your comments. We'd be  
16 glad to discuss the project with you, but that will be  
17 after I close the formal portion of the hearing.

18           I'm asking the speakers to use about  
19 three minutes of time so that everybody gets a fair  
20 chance to talk. And at the end, anybody that wants to  
21 say anything will be invited to speak freely.

22           Let me make a few things clear about the  
23 government's involvement in this project and our  
24 interest in it. This is what we call a merchant project  
25 proposed by a third party, in this case ESJ or Sempra

CLEAVES & ASSOCIATES (619) 238-1415

TRANSCRIPT OF PROCEEDINGS 10/5/2010

Page 7

1 Utilities. We have no vested interest in the outcome of  
2 the project either way. We are concerned only with  
3 whether or not to grant the Presidential permit based on  
4 the merits of the environmental impacts and other issues  
5 that we will consider including reliability of the grid  
6 and the public interest, but we are not supporting,  
7 endorsing, or in any way justifying the project. That's  
8 up to the applicant. We don't make any value judgments.

9 So your telling us you like it or don't like it  
10 or "We need it" or "We don't need it" is really outside  
11 the reason that we're here tonight. Those comments you  
12 would best make to your local regulatory permitting  
13 authorities in the County and the State, not to me as  
14 the Federal Government.

15 And on that note, I think I'll start going  
16 quickly through the slides and then we'll start the  
17 comment-taking process.

18 Oh, by the way, I should add in case you're  
19 wondering, the Environmental Impact Statement was  
20 prepared from monies provided by the applicant. Your  
21 taxpayer dollars did not go to the preparation of the  
22 analysis and your taxpayer dollars are not paying for  
23 the conduct of these meetings. And I thought some of  
24 you might be interested in hearing that.

25 Okay. So why are we here? Looking at the

CLEAVES & ASSOCIATES (619) 238-1415

Volume 3  
Comments and Responses

---

TRANSCRIPT OF PROCEEDINGS 10/5/2010

Page 8

1 slides, if we can have the next slide, please. Well, I  
2 already went through introductions. I'm going to talk  
3 about the DOE NEPA process. NEPA is the National  
4 Environmental Policy Act. We're going to look over the  
5 Draft EIS as to what's in it and then we'll do the  
6 public comment period and then closing remarks.

7           Next slide, please. There's an executive order  
8 that came out of the White House a long time ago -- I  
9 think it was back in the '50s -- that requires any  
10 transmission line that wishes to be constructed across  
11 the border, either between the U.S. and Canada or the  
12 U.S. and Mexico, to come to the Federal Government for  
13 what's called a Presidential permit. The reason it's  
14 called a Presidential permit was because it came out of  
15 the White House Presidential executive order.

16           Over the years, it ended up in my office at the  
17 Department of Energy. And because the request for a  
18 Presidential permit is what we call a major Federal  
19 action, it activates the National Environmental Policy  
20 Act, and under the National Environmental Policy Act we  
21 have to do an environmental review. And those of you  
22 who have watched this project from its inception will  
23 recall that originally it started as an environmental  
24 assessment.

25           And initially I was not involved with the

CLEAVES & ASSOCIATES (619) 238-1415

TRANSCRIPT OF PROCEEDINGS 10/5/2010

Page 9

1 project. I came along a little bit later after it  
2 started. Actually, I basically got involved when the  
3 decision was made in February of '09 to go beyond an  
4 environmental assessment and prepare a full-fledged  
5 comprehensive Environmental Impact Statement.

6 And you received notification that we were  
7 doing that back in February of '09 and that we didn't  
8 have public meetings because we had public meetings  
9 already on the environmental assessment, but we did have  
10 another open scoping period which allowed you to provide  
11 comments for us for the record, electronically or  
12 otherwise. Those of you who have been to the Web site  
13 know that all the scoping comments are public and on the  
14 Web site.

15 It's been a long stretch from that decision to  
16 tonight. The Environmental Impact Statement took a long  
17 time to produce, and you can see the product of that  
18 labor in the thickness of the volume. A great deal of  
19 time, effort, and money went into its production. It  
20 went through several layers of governmental review,  
21 including a National Laboratory, the Department of  
22 Energy, including our attorneys, and including our NEPA  
23 experts. So it's been reviewed, re-reviewed, and  
24 re-reviewed again which is why it took so long for us to  
25 get here tonight. So we think it's a pretty

CLEAVES & ASSOCIATES (619) 238-1415

Volume 3  
Comments and Responses

---

TRANSCRIPT OF PROCEEDINGS 10/5/2010

Page 10

1 comprehensive view of the project.

2           The public comment period on the draft expires  
3 on November the 1st. It makes no difference whether we  
4 hear from you tonight, whether you submit your comments  
5 on our Web site or through the mail or through faxing  
6 me. All comments are considered equally regardless of  
7 how they're received.

8           So even though you're here tonight, even though  
9 some of you are going to be speaking, you still have  
10 time to provide whatever you would like by way of the  
11 Internet through our Web site or through the mail or  
12 however you would like us to receive it. So this is not  
13 the only opportunity to comment, but it is an  
14 opportunity to comment. You still have until, as I  
15 said, November the 1st, and after that we will start the  
16 process of going through all the comments to prepare a  
17 final EIS.

18           Next slide, please. Actually, I pretty much  
19 covered a lot of this already. The comments you provide  
20 are all public. They will be on the Web site. In fact,  
21 there's a comment there already. As I mentioned, we  
22 have a court reporter here taking notes and when those  
23 notes are complete, the transcripts of these hearings  
24 will be put on the Web site, also.

25           As I mentioned before, we will then go into the

CLEAVES & ASSOCIATES (619) 238-1415

TRANSCRIPT OF PROCEEDINGS 10/5/2010

Page 11

1 process of preparing the final document. Once the final  
2 document is complete, the Department of Energy will then  
3 issue what's called a Record of Decision which  
4 essentially is exactly what's it's called. It's the  
5 decision the agency makes as to whether or not to grant  
6 the Presidential permit, and if the decision is made to  
7 grant it, that's an opportunity for us to attach  
8 conditions to the nature of the permit.

9 If the Record of Decision is affirmative, we  
10 will then issue the Presidential permit itself. That  
11 would complete the application process. Now, that's  
12 only from the Federal side. It doesn't in any way  
13 replace or involve what the project needs to do with  
14 regard to Patrick and the County or the public service  
15 commission or what have you. This is only one permit  
16 that the project requires. It's certainly not the only  
17 permit the project requires.

18 The next two slides pertain to the County's  
19 process, and for those next two slides I'll let Patrick  
20 do them justice because he certainly has a lot more  
21 knowledge than I do.

22 MR. BROWN: Thank you. As mentioned before,  
23 the County's a cooperating agency with DOE on this, and  
24 I think some things to understand is there's really two  
25 actions that are happening. DOE is basically approving

CLEAVES & ASSOCIATES (619) 238-1415

1 the ability of the power to go across the border. To  
2 actually do it, build it, operate it, maintain it falls  
3 under the County's local land use authority.

4 Now, something that I didn't know before this  
5 project ever came in is, well, why isn't that an SDG&E  
6 project and why isn't that like any other project? This  
7 is a little bit unique because it's what they call a  
8 generation-tie line. So the wind farm in Mexico will  
9 have, starting from the border, the U.S.-Mexico border,  
10 going up to the substation, that one-mile stretch is  
11 what they call a generation-tie line. That's owned by  
12 Sempra Generation, which is a different company than  
13 Sempra, the utility.

14 So utilities and power providers like Sempra  
15 Generation basically can't talk together and they can't  
16 communicate together. So that's why that generation-tie  
17 line basically falls to the County's local land use  
18 authority. So the County is in the situation because  
19 it's not a public utility, like the substation would  
20 have to have an application for what they call a major  
21 impact service utility under the zoning ordinance.

22 So Sempra Generation came in and applied for a  
23 Major Use Permit to build the one-mile transmission  
24 line. In doing that, that Major Use Permit also has  
25 another one that's tied to it which is here in Jacumba

TRANSCRIPT OF PROCEEDINGS 10/5/2010

Page 13

1 through the water service district for a groundwater  
2 extraction permit.

3           So there's basically two major use permits that  
4 are part of the County's process for the ESJ project.  
5 One is for the export of the groundwater from the  
6 service district for ESJ to use on their construction;  
7 the other one is for the construction and operation of  
8 the one-mile generation-tie line.

9           So as a cooperating agency, we're working with  
10 DOE to make this document here better. A lot of the  
11 information that Jerry did use and Entrix did use in  
12 this document was reviewed by the County previously. So  
13 we had been working with Semptra for basically about a  
14 year going through all their technical studies, all  
15 their CEQA technical studies, visual analysis, biology  
16 reports, storm water, all the typical reports that we  
17 would use in the County to get them to a level of  
18 adequacy that we were comfortable with, and that's what  
19 DOE has been using to create this.

20           So also that same technical information is what  
21 we provided to the CPUC for the East County Substation  
22 EIR. So at this point the County is working with the  
23 CPUC on a joint project I'm sure many of you are aware  
24 of, which is the ESJ project, the East County Substation  
25 project which runs from here in Jacumba all the way to

CLEAVES & ASSOCIATES (619) 238-1415

Volume 3  
Comments and Responses

---

TRANSCRIPT OF PROCEEDINGS 10/5/2010

Page 14

1 Boulevard and upgrades the Boulevard Substation and then  
2 the Tule Wind project which feeds in there. So the  
3 County's working with BLM, CPUC, California State Lands,  
4 BIA, Bureau of Indian Affairs, on doing a comprehensive  
5 EIR and EIS for that project.

6 It's the County's intention that that document  
7 will be used to issue any major use permits for the Tule  
8 Wind project and the ESJ project. So the EIS, the  
9 County is not going to use this document to make its  
10 local land use decisions, but there will be separate  
11 meetings and separate processes that you can also  
12 provide comment on the actual -- this project through  
13 the CPUC process.

14 So just so we know that there's a  
15 differentiation between the two projects, this project  
16 is only for the crossing of the power across from one  
17 country to another. There still is another process for  
18 the local land use permit. So I believe that's it.

19 DR. PELL: That's it. Thanks, Patrick.

20 The next slide merely reviews what the project  
21 is. As most of you know, it's a proposal to construct  
22 and operate either a 230- or 500-kV transmission line  
23 that would run from the wind farm in Baja California  
24 north into the San Diego area. You know where the  
25 project is.

CLEAVES & ASSOCIATES (619) 238-1415

TRANSCRIPT OF PROCEEDINGS 10/5/2010

Page 15

1           These diagrams, I don't expect you to be able  
2 to study them from the handout. They're much too small.  
3 But if you go to the EIS, you will find pretty good  
4 reproductions of these maps in the EIS and they're  
5 electronically on the CD. And those of you that use the  
6 CD, you can electronically on the computer screen blow  
7 those maps up to look at the detail that you can't do on  
8 paper. So we tried to make those maps as informative as  
9 we possibly could.

10           The next slide indicates the fact that the  
11 project proposes to construct five either lattice  
12 towers, which are the standard transmission line towers  
13 that you normally see like, for example, the Southwest  
14 line that's right near us, or monopoles. That decision  
15 has not yet been made. The applicant would prefer a  
16 230-kV route, but it depends on how the ECO Substation  
17 is finally configured as to whether to go with 230 or  
18 500.

19           The length of the line on the U.S. side is  
20 .65 miles which is -- what? -- 3,200 feet, some such  
21 thing. And on the south side, south of the border, it  
22 runs about a mile to a substation within Baja California  
23 in which it connects to the proposed wind machines.

24           Next slide, please. This slide just summarizes  
25 the nature of the project on the Mexican side. My

CLEAVES & ASSOCIATES (619) 238-1415

Volume 3  
Comments and Responses

---

TRANSCRIPT OF PROCEEDINGS 10/5/2010

Page 16

1 understanding is that the nearest wind machine to the  
2 U.S. border is .7 miles south of the border.

3 This second bullet, "Wind turbines nearest to  
4 the U.S. about .7 miles south of the U.S. border." All  
5 other machines will be further away.

6 And the first phase, the first build-out of the  
7 wind farm, will be about 52 machines roughly  
8 representing 130 megawatts of power.

9 The next slide, please. In the course of  
10 preparation of the Environmental Impact Statement, we  
11 contacted and dealt with a great number of local and  
12 regional agencies, including the Federal U.S. Fish and  
13 Wildlife Service.

14 We were in contact with Indian tribes that were  
15 invited to consult with us under the provisions of the  
16 Bureau of Indian Affairs. We did do consultation with  
17 the Campo tribe which was the only tribe that indicated  
18 that level of interest.

19 We have been in communication with other  
20 Federal and State agencies, including the Border Patrol,  
21 Bureau of Land Management, Federal Aviation  
22 Administration, EPA, and a host of California State  
23 agencies. So we've done all the communications that we  
24 thought were appropriate for the project.

25 Next slide, please. This is just a brief

CLEAVES & ASSOCIATES (619) 238-1415

TRANSCRIPT OF PROCEEDINGS 10/5/2010

Page 17

1 run-through of the environmental issues we looked at.  
2 It's a comprehensive list. I hope we left nothing out.  
3 I think we left nothing out. It really embraces the  
4 entire spectrum of issues, everything from biological to  
5 visual to fire and fuels management, cultural resources,  
6 socioeconomics, environmental justice, what have you.

7           The next slide. This just summarizes what we  
8 found in the report with regard to biological resources,  
9 what the potential impacts would be. During  
10 construction there would be some temporary habitat  
11 disturbance and then, as the second bullet indicates,  
12 permanent disturbance of some degree to about ten acres  
13 of land, and the rest of the bullets you can read right  
14 off the handout.

15           The next slide goes over a few of the special  
16 status species that were looked at with regard to  
17 Federally listed species with potential to occur in the  
18 project area. Again, a lot of you are familiar with  
19 these. The Quino checkerspot butterfly, no impacts  
20 expected; California condor, very low probability of  
21 occurrence; Peninsular bighorn sheep, critical habitat  
22 is avoided by the project; arroyo toad, southwestern  
23 willow flycatcher, Least Bell's Vireo, which is a bird  
24 for those of you who don't know, low potential for  
25 effect.

CLEAVES & ASSOCIATES (619) 238-1415

1           Okay. Next slide. This is an issue that a lot  
2 of you are interested in, of course, the visual  
3 resources, visual impacts, and we had a professional  
4 company that specializes in doing these things, do  
5 visual simulations from a number of Key Observation  
6 Points, which are abbreviated as KOPs in the EIS, and  
7 you will see in the EIS the simulations of the before  
8 and afters as to how we think a line and the wind  
9 machines would look from these various Key Observation  
10 Points.

11           By the way, this slide also notes that it looks  
12 like lattice towers are probably preferable to monopoles  
13 with regard to visual impact, which, by the way, was a  
14 surprise to me.

15           UNIDENTIFIED VOICE: Yeah.

16           DR. PELL: Next slide. Again continuing visual  
17 resources, potential mitigation for transmission lines,  
18 some of the things that could be done to make them a  
19 little bit less visible, again, you can read that off  
20 the sheet or in the book.

21           The next slide after that, this is Table 2-3  
22 which is really the heart of the EIS. This is the most  
23 important single table or chart in the document which is  
24 a detailed summary of all of the different potential  
25 impacts. So I encourage you to study that table in the

TRANSCRIPT OF PROCEEDINGS 10/5/2010

Page 19

1 document. If you look at only one thing, this would be  
2 the one thing to look at.

3 The slide after that reiterates again what I  
4 said at the outset about the fact that your comments are  
5 welcome. Use the address of the Web site. You would do  
6 well to use that Web site. There's a comment provision  
7 on the Web site for you to provide comments and upload  
8 files.

9 The entire EIS is on that Web site. You can  
10 download any part of it you wish electronically. Of  
11 course, we also have the CDs up front at the sign-in  
12 table. So you have the CD. Also, the CD is bound into  
13 the summary volume. It's also bound into the complete  
14 volume. So you do have the electronic copy of the  
15 document, the wordsmithing on it, or what have you.

16 We say that the comment period closes on  
17 November the 1st, but if for some reason you just simply  
18 aren't able to make that deadline, all is not lost. We  
19 will entertain receiving your comments after the 1st of  
20 November. The exact wording is "to the extent  
21 practicable." That means that if we can consider it we  
22 will, whereas if it comes in on time we definitely will.  
23 But November the 1st is not the last get. If you want  
24 to get something in to us after that, we will consider  
25 it as long as we're not so far along that it's too late

CLEAVES & ASSOCIATES (619) 238-1415

Volume 3  
Comments and Responses

---

TRANSCRIPT OF PROCEEDINGS 10/5/2010

Page 20

1 to address the issue. So I would prefer, of course,  
2 that you respect the November 1st deadline if you  
3 possibly can.

4 The slide after that is the contact  
5 information. You are readily able to communicate with  
6 either me or Patrick or my contractor Entrix which is  
7 the consultant that prepared the EIS. They're here  
8 tonight. This is Tim Murphy who's running the slide  
9 show and the ladies at the registration desk, and also  
10 Alberto Abreu from Sempra is here as well and this is  
11 all his contact information, so we're not hiding from  
12 you.

13 And with that, that completes the formal  
14 presentation.

15 Abreu, did you want to say something? I'm  
16 sorry. Alberto. Forgive me.

17 MR. ALBERTO ABREU: I just wanted to --

18 DR. PELL: Will you use the microphone, please,  
19 Alberto, so we can hear you. If you can introduce  
20 yourself.

21 MR. ABREU: My name is Alberto Abreu with  
22 Sempra Generation. I'm director of project development  
23 in charge of ESJ.

24 I just wanted to clarify one thing that you  
25 said early on which I think was more of a slip of the

CLEAVES & ASSOCIATES (619) 238-1415

TRANSCRIPT OF PROCEEDINGS 10/5/2010

Page 21

1 tongue than anything else, which is this project has  
2 been proposed by Sempra Generation, not Sempra  
3 Utilities. Sempra Utilities has no involvement in the  
4 generation-tie line or in the Mexican wind project that  
5 you've evaluated in the EIS, and I just wanted to make  
6 sure that was clear for the record.

7 DR. PELL: Thank you. I appreciate it. I  
8 haven't been that clear on the distinction, so I  
9 appreciate your clarifying us on that. Thanks a lot,  
10 Alberto.

11 Now, are there any elected officials in the  
12 audience this evening that would like to speak? As a  
13 courtesy, we give first call for elected officials. Are  
14 there any Federal, State, or local government officials  
15 here that would like to comment?

16 MS. DONNA TISDALE: Local.

17 DR. PELL: Okay. Come up to the mic. Tell us  
18 who you are and I look forward to hearing your comment.

19 MS. TISDALE: Donna Tisdale. I would like to  
20 request a little extra time because I represent several  
21 groups.

22 DR. PELL: Let's do it this way. By the way,  
23 you are the first person to speak anyway because you're  
24 the only person that got your name in in advance of the  
25 September 30th cutoff.

CLEAVES & ASSOCIATES (619) 238-1415

Comments and Responses

---

TRANSCRIPT OF PROCEEDINGS 10/5/2010

Page 22

1 MS. TISDALE: I follow directions well.

2 DR. PELL: I'm glad to see somebody that does,  
3 because there were some late requests that I didn't  
4 receive in time to consider. Let's do it this way: Try  
5 to do an overview in the three minutes, see how it goes,  
6 and at the end of the list if there's more time, I will  
7 be delighted to have you back. Does that sound fair?

8 UNIDENTIFIED VOICE: The microphone's not  
9 working.

10 UNIDENTIFIED VOICE: Can't hear her.

11 MS. TISDALE: Hello, hello.

12 UNIDENTIFIED VOICE: Not working.

13 DR. PELL: Donna, take mine.

14 UNIDENTIFIED VOICE: It's not as high.

15 MS. TISDALE: Okay. Donna Tisdale. I'm  
16 representing myself as an individual, the Boulevard  
17 Planning Group, and Backcountry Against Dumps, a  
18 nonprofit. I'm also secretary of the Protect Our  
19 Communities Foundation --

20 DR. PELL: I'm sorry. I'm having trouble  
21 hearing you. Protective which?

22 MS. TISDALE: The Protect Our Communities  
23 Foundation, the East County Community Action Coalition,  
24 and San Diego Sierra Club. All the groups that I just  
25 mentioned have gone on record as opposing this

CLEAVES & ASSOCIATES (619) 238-1415

TRANSCRIPT OF PROCEEDINGS 10/5/2010

Page 23

1 Presidential permit for Energia Sierra Juarez and the  
2 installation of industrial wind turbines in this  
3 sensitive binational area. I've gone into detail as to  
4 our position.

5 Some project proponents and decision-makers see  
6 this area as a desert wasteland ripe for  
7 industrialization and sacrifice as a renewable energy  
8 zone to send energy to far-off cities. They see big  
9 dollar signs. We see the area as a living, breathing  
10 ecosystem that provides open, uncluttered vistas and  
11 recreation resources. It's rich with --

12 THE REPORTER: I'm sorry. You're going to have  
13 to slow down.

14 MS. TISDALE: It's very hard to speak publicly.

15 DR. PELL: You want the record to reflect  
16 exactly what you said.

17 MS. TISDALE: -- rich with unique, abundant,  
18 and varied vegetation, wildlife, and history. We love  
19 it and we will fight to keep it from being sacrificed.

20 If this line is approved, I think everybody  
21 here knows it will not be the last. It will be the  
22 first of many, because the ECO Substation is planned for  
23 massive expansion.

24 Sempra's August 28, 2009 letter to the  
25 Department of Energy urges the use of gen-tie instead of

CLEAVES & ASSOCIATES (619) 238-1415

**RESPONSE TO 601-1:** Comments pertaining to the renewable energy market structure are outside the scope of the NEPA process. DOE will consider this comment before making a final determination on the permit application.

601-1

601-2 1 transmission line. Gen-tie designation would limit the  
2 use of the Presidential-permitted line to just Sempra.  
3 Sempra will be the exclusive gatekeeper for any wind  
4 developer that wants to export to the U.S. market over  
5 that line, and this is a key issue, this Environmental  
6 Impact Statement. Department of Energy will be  
7 basically granting a monopoly control of the north Baja  
8 renewable export market to Sempra if they approve the  
9 application as is.

10 And I want to publicly request that Sempra's  
11 former lobbyist for Sunrise, David Hayes -- he's now the  
12 number two guy at the Department of Interior, very  
13 influential in the Obama Administration -- that he not  
14 have any influence or any input into this project or  
15 this decision.

601-3 16 Connected actions: La Rumorosa Wind Energy  
17 project, now ESJ, was considered to be a connected  
18 action, indirect effect, in the Sunrise Powerlink  
19 EIR/EIS. So how can DOE claim that ESJ is not a  
20 connected action to Sunrise?

21 The FUC/BLM-recirculated Draft EIR,  
22 Supplemental EIS made the following response to a  
23 comment from a letter of Department -- excuse me --  
24 Center for Biological Diversity and Sierra Club, and  
25 that comment is No. G0018-3, quote, The La Rumorosa Wind

**RESPONSE TO 601-2:** Comments pertaining to the renewable energy market structure are outside the scope of the NEPA process. DOE will consider this comment before making a final determination on the permit application. It is of interest to note that other comments have expressed the opposite concern, i.e., that the line could provide access to other generators. The nature of the Presidential permit is such that, it is issued specifically and solely to the applicant of record; any change of the permittee's identity could engender the need for a permit amendment application. See also the response to comment 505-2 in this regard.

**RESPONSE TO 601-3:** Refer to the response to comment 108-4.

TRANSCRIPT OF PROCEEDINGS 10/5/2010

Page 25

1 Energy projects was analyzed as an indirect effect  
2 because in the Addendum to the Application for the  
3 Presidential permit filed March 19, 2008, Semptra  
4 Generation stated that Cal ISO had indicated that  
5 Sunrise Powerlink or other transmission upgrade would be  
6 necessary to deliver energy from the wind development in  
7 the La Rumorosa area.

8 It would have been considered a connected  
9 action except for the fact that the wind energy will be  
10 generated in Mexico. Sorry. I have to write this down  
11 so I don't go off track and display my anger.

12 Semptra can't have it both ways by telling  
13 Cal ISO that they need Sunrise Powerlink or some other  
14 identified transmission to move energy out of the area  
15 and then claim to DOE that they don't need Sunrise.  
16 Energia Sierra Juarez has not identified any other  
17 transmission alternatives, so the transmission line for  
18 the proposed wind energy project must be considered a  
19 connected action.

20 ESJ DEIS connected actions for ECO Substation  
21 and the Southwest Powerlink loop-in section at 4.1, DEIS  
22 is written as though the Boulevard Substation expansion  
23 and new transmission line connecting Boulevard and ECO  
24 Substation is not included as a connected action. Just  
25 the switchyards and loop-in are referenced.

CLEAVES & ASSOCIATES (619) 238-1415

601-3

1 Because the ECO Substation project includes the  
2 Boulevard expansion, which is a 600 percent increase in  
3 size, and the 13-plus miles of new 138-kV line, those  
4 impacts must be included and addressed in this Draft  
5 EIS. Sunrise Powerlink EIS/EIR ID'd the ECO Substation  
6 that includes the Boulevard Substation and a 138-kV line  
7 as a connected action. The DOE/Sempra can't pick and  
8 choose what they want included.

9 Golden eagles are impacted by both ESJ wind  
10 turbines and power lines. They are protected under the  
11 Bald and Golden Eagle Protection Act, yet because no  
12 eagles were seen on the survey days --

13 DR. PELL: I'm sorry. "Yet the" something  
14 eagles?

601-4

15 MS. TISDALE: Yet because no eagles were seen  
16 on the survey days, the DOE claims there will be no  
17 impact. Sempra's hired researchers have documented  
18 golden eagles in the project area where turbines will be  
19 located. Golden eagles are also present in McCain  
20 Valley where Tule Wind is, which DOE recognizes as a  
21 connected action, and throughout the backcountry. I  
22 actually photographed a golden eagle on our ranch last  
23 Christmas.

24 Golden eagles and turkey vultures and other  
25 sensitive species range in wide area and should be

**RESPONSE TO 601-4:** Refer to response to comments 108-8 and 201-3 for discussion of golden eagles. Note that DOE does not consider Tule Wind to be a connected action for this EIS. Rather, this EIS treats Tule Wind, Sunrise Powerlink, the 138-kV line to the Boulevard substation, and several other ongoing and proposed projects as potential sources of cumulative impacts. Section 5 presents DOE's assessment of cumulative impacts.

TRANSCRIPT OF PROCEEDINGS 10/5/2010

Page 27

601-4

1 considered as impacted by both the proposed power line,  
2 ESJ turbines, Tule Wind turbines, Sunrise Powerlink, and  
3 the new 138-kV line for ECO Substation.

4 On September 20th the Fish and Wildlife just  
5 recommended that wind turbines be located no closer than  
6 six miles from golden eagles' nests in order to reduce  
7 impacts at the proposed Summit Ridge wind farm in  
8 Oregon. Why is Tule Wind or ESJ any different?

9 Bighorn sheep: The Draft EIS states there are  
10 no expected impacts to bighorn sheep because their  
11 critical habitat is either 600 feet or three miles --  
12 both of those were included -- east of the ECO  
13 Substation loop-in. There are no records of bighorn  
14 sighted within one mile of either site. I-8 is a  
15 barrier to sheep movement, and the U.S. Fish and  
16 Wildlife Service did not ask for bighorn surveys at the  
17 site. We consider this absurd.

18 I just have to look at the Imperial Valley  
19 Solar site as an example. Bighorn sheep were not  
20 expected on site yet they were photographed there. It  
21 was determined that the site contained important forage,  
22 and U.S. Fish and Wildlife is now working on a take  
23 permit for impacts to bighorn sheep. Locals know well  
24 that I-8 is not a barrier to sheep movement. They cross  
25 over it and under it on a regular basis. One witness

CLEAVES & ASSOCIATES (619) 238-1415

1 has even reported finding a dead bighorn sheep  
2 immediately east of the proposed site.

3 This Presidential permit will allow for  
4 construction of hundreds of industrial turbines, wind  
5 turbines, that will impact bighorns in the Jacumba  
6 Wilderness area and in the Sierra Juarez and also  
7 connected actions in Tule Wind, McCain Valley. You  
8 cannot separate the power line impacts from the turbine  
9 impacts. They are all part of the same action.

10 We disagree with the cumulative impact list  
11 which should include the existing Southwest Powerlink  
12 and the border fence. The border fence did not undergo  
601-5 13 any environmental review, and we disagree with your  
14 dismissal of the environmental justice issues and much  
15 more.

16 We know the Department of Energy is prepared to  
17 rubber-stamp this project for Sempra despite the  
18 significant, cumulative impacts and violations of law  
19 just like the BLM approved for the Sunrise Powerlink,  
20 approved the Sunrise Powerlink for SDG&E, and today's  
21 announced approval of the Imperial Valley Solar project,  
22 another massive public landgrab for an unjustified,  
23 unproven renewable energy project.

24 Our grassroots coalition will be submitting  
25 much more extensive comments on the Draft EIS by the

**RESPONSE TO 601-5:** DOE agrees that the border fence contributes to cumulative environmental impacts in the project area. Because it already exists, it is already affecting environmental conditions and its impacts on specific resources are acknowledged in appropriate subsections of Section 3. Additionally, Section 5.3.1 discusses impacts of the border fence on biological resources in the context of cumulative impacts. The EIS treats Sunrise Powerlink as a source of cumulative impacts.

TRANSCRIPT OF PROCEEDINGS 10/5/2010

Page 29

1 November 1 deadline, our attorney will, and we will  
2 continue to push renewable energy generation at or close  
3 to the point of use on existing structures and already  
4 disturbed lands.

5 I also wanted to note that the Department of  
6 Interior has not responded to our formal request to  
7 investigate the catastrophic failure at Kumeyaay Wind.  
8 I also want you to know that FAA has not enforced proper  
9 operation of those FAA lights since that catastrophic  
10 failure. They are still not working properly since last  
11 December. If you go out of here tonight on I-8, you  
12 will see that the white strobe lights are working but  
13 not the red FAA lights.

14 I also want to note that the original power  
15 purchase agreement from this project was withdrawn.  
16 There is no power contract for this project and Sempra  
17 has stated they will not build the project until they  
18 have that contract. Thank you very much.

19 DR. PELL: Ms. Tisdale, would you be able to  
20 leave your printed remarks with the reporter for her  
21 clarification?

22 MS. TISDALE: If she gives me her card, I will  
23 clean them up and send them to her.

24 DR. PELL: If we can do that, that will be  
25 great. By the way, I want to let you know that it's a

CLEAVES & ASSOCIATES (619) 238-1415

Volume 3  
Comments and Responses

---

TRANSCRIPT OF PROCEEDINGS 10/5/2010

Page 30

1 pleasure meeting you after we exchanged all our e-mails.

2 MS. TISDALE: Yes. Thank you.

3 DR. PELL: And I look forward to your  
4 supplemental comments that you said would be coming in  
5 from your organization.

6 MS. TISDALE: Thank you.

7 DR. PELL: Thank you.

8 Okay. We now move on to Terry Weiner or  
9 "Winer," forgive me, Desert Protective Council.

10 MS. TERRY WEINER: Good evening. Good evening.  
11 Hi. My name is Terry Weiner. I'm the Imperial County  
12 Conservation and Projects coordinator for the Desert  
13 Protective Council. We are based in San Diego,  
14 California.

15 And tonight I would like to do two things:  
16 One, register our presence and our request that the  
17 Department of Energy deny the Presidential permit for  
18 these projects because of the inadequacy of parts of the  
19 EIS, which I have yet to thoroughly analyze. I've  
20 actually just begun to look at the documents. I'd  
21 rather wait until I can make some substantial comments,  
22 but we are glad that you're having this meeting and  
23 looking forward to submitting comments before the  
24 November 1st deadline.

25 DR. PELL: Thank you. I'll look forward to

CLEAVES & ASSOCIATES (619) 238-1415

TRANSCRIPT OF PROCEEDINGS 10/5/2010

Page 31

1 receiving those. Thank you very much.

2 We now move on to -- well, I was going to say  
3 Donna Tisdale, but we already heard from Ms. Tisdale.  
4 By the way, you didn't say you would like a final copy  
5 of the EIS. I assume you would.

6 MS. TISDALE: Yes.

7 DR. PELL: That takes us to Denis "Trafecant"  
8 with Protect our Communities Foundation.

9 MR. DENIS TRAFECANTY: Hello. My name is  
10 Denis Trafecanty from Santa Ysabel --

11 DR. PELL: I'm sorry.

12 MR. TRAFECANTY: -- California. I'm the  
13 president of the Protect Our Communities Foundation.  
14 I'm a member of the East County Community Action  
15 Coalition and the Backcountry Against Dumps.

16 I found it interesting to look at the back of  
17 this slide here under the County of San Diego emblem  
18 that says "The noblest motive is the public good." If  
19 that's the case, I submit to you that we don't need the  
20 ESJ at all.

21 There's a report that's been prepared by one of  
22 our board members of the Protect Our Communities  
23 Foundation. It's called the San Diego Smart Energy 2020  
24 Plan. It explains how you could build all the rooftop  
25 solar you want in San Diego and cover those rooftops

CLEAVES & ASSOCIATES (619) 238-1415

**RESPONSE TO 601-6:** As is explained in text added to Section 1.5.1.2, distributed energy alternatives, such as small scale solar panel applications in urban settings, are outside the range of reasonable alternatives for this EIS because they do not respond to DOE's purpose and need.

601-6

Volume 3  
Comments and Responses

---

TRANSCRIPT OF PROCEEDINGS 10/5/2010

Page 32

1 with the solar and residential rooftops. I don't use  
2 any energy from Sempra or SDG&E or Sempra Generation or  
3 whatever you want to call them.

4 I submit to you that they are in collusion with  
5 each other and also they got their hands slapped to the  
6 tune of in excess of \$1 million which included money for  
7 the CPUC coffers and also for training their own  
8 executives on proper ethics in connection with the  
9 proposed Sunrise Powerlink.

10 I will send you this formal document so that  
11 you can read it and consider it. And if you believe the  
601-6 12 conclusions of this report, then you wouldn't need Tule  
13 Wind, you wouldn't need ESJ, you wouldn't need these  
14 substations that are being built. That wouldn't be, as  
15 you say, the noblest motive is the public good. That  
16 wouldn't be in the eyes of public good if it wasn't  
17 needed.

18 I also submit to you that I'm a little bit  
19 concerned about the fact that taxpayers aren't paying  
20 for this meeting and all of the work that's done on  
21 this, because I do believe that if Sempra owns SDG&E and  
22 Sempra Generation and they generate a lot of money from  
23 ratepayers, maybe we won't call it taxpayers but let's  
24 call it ratepayers. I'm not a ratepayer because I have  
25 solar on my rooftop. I am tied to the grid, but I send

CLEAVES & ASSOCIATES (619) 238-1415

TRANSCRIPT OF PROCEEDINGS 10/5/2010

Page 33

1 more energy back to the grid than the -- the grid  
2 doesn't really need to send me any energy. I only keep  
3 it hooked up 'cause it's for the public good if I send  
4 energy back to the grid that I can't use.

5 So I question whether you've considered the  
6 alternatives. I don't know what we could do about  
7 looking into the Mexico situation, but I hear talk  
8 about, you know, water lines, natural gas lines going  
9 back and forth to a Baja terminal, and all I hear about  
10 tonight is wind energy, renewable energy. 25, 26 years  
11 ago they talked about how they were going to use the  
12 Southwest Powerlink to bring geothermal energy into  
13 San Diego.

14 Well, I submit to you that there's 65 megawatts  
15 of energy, a maximum amount that's going 26 years later.  
16 I don't want to get hoodwinked again on something that  
17 is similar to what has happened in the past, especially  
18 considering the track record of this company called  
19 Sempra especially in the early '90s.

20 So please consider these comments. I'm not  
21 sure what would come across would be renewable energy.  
22 I believe pretty strongly that it's fossil fuel energy,  
23 and we will be sending a lot of comments to you and I  
24 will submit to you this report that I strongly suggest  
25 that you read. Thank you very much.

CLEAVES & ASSOCIATES (619) 238-1415

Comments and Responses

---

TRANSCRIPT OF PROCEEDINGS 10/5/2010

Page 34

1 DR. PELL: Thank you, Denis. I wanted to say a  
2 few things with regard to your remarks. First of all,  
3 with regard to the fact that the applicant paid for the  
4 EIS, actually I'm glad you mentioned it because it's  
5 worth clarifying. They paid for it, but the Department  
6 of Energy has managed the actual conduct of the EIS. In  
7 fact, the applicant has not seen the Draft EIS any  
8 sooner than you did. They got it at the same time you  
9 did. So the government really did manage that project  
10 even though the applicant was paying for it. They had  
11 no hand in the analysis itself except provide whatever  
12 information was asked of them. So I thought that was  
13 worth mentioning.

14 Ms. Tisdale, you mentioned a gentleman from the  
15 Department of the Interior. I've never heard his name  
16 before. So I can assure you that, to date at least,  
17 there has been no communication with that party. As I  
18 said, I've never heard of his name before.

19 MS. TISDALE: Are you the only person dealing  
20 with this within the Department of Energy?

21 DR. PELL: Directly, yes.

22 MS. TISDALE: Well, maybe indirectly.

23 DR. PELL: No. I would know about it.

24 MS. TISDALE: Well, just remember the name.

25 DR. PELL: Well, I have no reason to.

CLEAVES & ASSOCIATES (619) 238-1415

TRANSCRIPT OF PROCEEDINGS 10/5/2010

Page 35

1 Patrick asked me to mention also that they have  
2 no connection with that party either.

3 MR. BROWN: The County as well as DOE, we've --  
4 were paid for directly by the applicant, so County funds  
5 or taxes don't go to development projects nor any of the  
6 CEQA review done on any of the studies or were reviewed  
7 by the applicant, so we're the same as them.

8 DR. PELL: Thank you. We go to great lengths  
9 to maintain a barrier between the development of the  
10 Environmental Impact Study and the applicant to ensure  
11 that it's objective and it's done the way we think it  
12 should be done, and I can assure you that that was  
13 certainly the case here.

14 I would like to now call on Derik Martin who's  
15 the next party to speak.

16 MR. DERIK MARTIN: My name is Derik Martin and  
17 I'm a local landowner here. This gentleman here spoke  
18 about his solar. I think that the pictures might show a  
19 little bit better how much solar you actually need to  
20 run a house. This is my house. It's 100 percent solar.  
21 That's 170 square foot.

22 DR. PELL: Are you entering that photograph  
23 into the record?

24 MR. MARTIN: Yes. You can have it.

25 DR. PELL: Would you, when you're through,

CLEAVES & ASSOCIATES (619) 238-1415

Volume 3  
Comments and Responses

---

TRANSCRIPT OF PROCEEDINGS 10/5/2010

Page 36

1 leave it at the --

2 MR. MARTIN: I'm going to pass it around so the  
3 people can see it and they can turn it in.

4 DR. FELL: Okay. When you turn it in, turn it  
5 in to the front desk.

6 MR. MARTIN: Okay. Okay. So that's the impact  
7 that I have, is 175 square feet. Everybody in the  
8 United States, or at least here anyways in Southern  
9 California, can have one of these. We wouldn't need any  
10 of this stuff.

11 The other comment was about the sheep, and the  
12 sheep in here it says they're not really affected  
13 because they're two miles from critical habitat or this  
14 ESJ is two miles from critical habitat. Well, sheep  
15 don't know what's critical habitat and what isn't not  
16 critical habitat.

17 And here's photos, and I'm not going to submit  
18 all of them because there's too many of them but I'll  
19 submit the top, say, four. These are over two miles  
20 from critical habitat. These are about three miles on  
21 the other side of this project that you're talking about  
22 but really close to where the power line's going to be  
23 going.

24 There's herds and herds of these sheep around  
25 here. There's only 300 sheep left in San Diego County.

CLEAVES & ASSOCIATES (619) 238-1415

TRANSCRIPT OF PROCEEDINGS 10/5/2010

Page 37

1 I had a game camera set up for about three days. I got  
2 probably 50 to 60 pictures of bighorn sheep. If I set a  
3 game camera up on the Mexican side of the border, I can  
4 bet every nickel I have that I would have a lot more  
5 than what I have here as far as photos go. The sheep  
6 are pushed as far east as they can go. They're not  
7 going to go down into the Imperial Valley and live down  
8 there. It's too hot for them. There's nowhere else for  
9 them to go.

10 This impact is -- I mean, this was really  
11 brilliant the way that Sempra introduced this because  
12 it's three separate projects, and they're going to push  
13 each one as three separate projects; but to me it's one  
14 big huge inundation of baloney sold to the public as  
15 necessity, and it's going to impact the whole entire  
16 ecosystem.

17 And you can't just say it's just this little  
18 line that runs 3.6 miles across the border because  
19 that's not what it's all about. It's basically about a  
20 swath thousands and thousands and thousands of acres,  
21 probably about, I would guess just off the top of my  
22 head, an eighth the size of Borrego State Park. That's  
23 the area that you're going to disrupt.

24 DR. PELL: You're talking about in Baja  
25 California?

CLEAVES & ASSOCIATES (619) 238-1415

Volume 3  
Comments and Responses

---

TRANSCRIPT OF PROCEEDINGS 10/5/2010

Page 38

1 MR. MARTIN: I'm talking about Borrego Park  
2 here in San Diego.

3 DR. PELL: How is the transmission line going  
4 to disrupt that amount over there?

5 MR. MARTIN: Because if you take -- the damage  
6 you're doing -- you already have ten acres. You said  
7 this little area here is going to disrupt ten acres.  
8 Forget it. And I'm saying with the Southwest Powerlink  
9 and this project and your transmission project, what's  
10 that, a couple hundred acres?

11 DR. PELL: When you say "this project and the  
12 transmission project," this project is the transmission  
13 project. You're losing me.

14 MR. MARTIN: Okay. You got the Southwest  
15 Powerlink; right?

16 DR. PELL: Southwest is an existing line.

17 MR. MARTIN: Okay. What's the one -- Sunrise  
18 Powerlink.

19 MR. BROWN: Sunrise.

20 MR. MARTIN: You have the ESJ and then you have  
21 the sub project. That's three projects.

22 DR. PELL: Okay. We're only here tonight to  
23 address the ESJ.

24 MR. MARTIN: I understand. I'm saying the way  
25 that Sempra introduced this is brilliant because you're

CLEAVES & ASSOCIATES (619) 238-1415

TRANSCRIPT OF PROCEEDINGS 10/5/2010

Page 39

1 only here for one item. You have to look at the big  
2 picture.

3 DR. PELL: You know that there is a separate  
4 EIS/EIR in preparation between the Federal Bureau of  
5 Land Management and the California Public Utilities  
6 Commission and they're going to be presenting their own  
7 EIR/EIS before too much longer. I expect to see that  
8 before Christmas. So you would really do well to review  
9 that document and attend those public hearings, as well.

10 MR. MARTIN: Okay. Yeah. Anyway, I'll submit  
11 these pictures. You can look at the sheep if you want.

12 DR. PELL: Can you tell us precisely what the  
13 vantage point was, where that camera was located?

14 MR. MARTIN: The camera was located at Mountain  
15 Springs which is just down the hill from Jacumba,  
16 probably -- I don't know. What, about three or  
17 four miles?

18 UNIDENTIFIED VOICE: Not even that.

19 MR. MARTIN: Not even that. So from where --

20 UNIDENTIFIED VOICE: Between a mile and a half,  
21 mile and three-quarters.

22 MR. BROWN: Are you going to submit --

23 MR. MARTIN: Here. Here's a photo. This shows  
24 where it's at.

25 MR. BROWN: Derik, are you going to submit

CLEAVES & ASSOCIATES (619) 238-1415

Volume 3  
Comments and Responses

---

TRANSCRIPT OF PROCEEDINGS 10/5/2010

Page 10

1 formal comments?

2 MR. MARTIN: Yeah.

3 MR. BROWN: Okay. In your formal comments, try  
4 to give like a parcel number or a coordinate of where  
5 these photos are taken. That way, you know, they can  
6 put a map or --

7 MR. MARTIN: Right.

8 MR. BROWN: -- otherwise it's just a --

9 MR. MARTIN: They weren't all taken at the same  
10 spot and that's kind of my point, is the sheep don't  
11 just wander in critical habitat. They wander where  
12 there's food and water, and there's food and water on  
13 both sides of the border and the climate's the same, you  
14 know, and there's just a small area left where these  
15 sheep are actually at and happens to be right here.

16 DR. PELL: Whichever ones of these photographs  
17 you do wish to submit, please do follow up with  
18 documentation as Patrick has suggested as to exactly  
19 where the camera was, where it was taken, over what  
20 length of time.

21 MR. MARTIN: Okay. And you know what? I can  
22 take more, too. I mean, it's real easy. You go set the  
23 camera up and there's sheep. You know, it's not like  
24 there are plentiful sheep. There are separate herds of  
25 sheep that show up for water.

CLEAVES & ASSOCIATES (619) 238-1415

TRANSCRIPT OF PROCEEDINGS 10/5/2010

Page 11

1           So anyway, I don't want to get too caught up on  
2 that. I wanted to make a couple more points. And I  
3 could -- now I've -- I don't remember exactly.

4           Anyway, my point was basically you've got to  
5 look at all three projects. I mean, I've got photos of  
6 sheep. I've got the photos of the -- and you mentioned  
7 the -- I call them vultures, the turkey vultures. I've  
8 got pictures of those, the hawks, foxes, coyotes. The  
9 sheep are of more interest because they are endangered  
10 and there's not too many of them left, and they're only  
11 in this one area that Sempra seems to want to put all  
12 this unnecessary alternative energy projects into.

13           So I'll go ahead and leave these in the back  
14 you said?

15           DR. PELL: Thank you very much. I look forward  
16 to whatever follow-up you care to provide us by the 1st  
17 of November.

18           The next speaker is Mark Ostrander.

19           MR. MARK OSTRANDER: My name is Mark Ostrander.  
20 I'm representing myself, O-s-t-r-a-n-d-e-r. I noticed  
21 on your cumulative impact for projects that you took for  
22 effect --

23           UNIDENTIFIED VOICE: Microphone.

24           MR. OSTRANDER: -- I didn't see on there the  
25 Enrus LLC solar project, the Truckhaven Geothermal

CLEAVES & ASSOCIATES (619) 238-1415

Volume 3  
Comments and Responses

---

TRANSCRIPT OF PROCEEDINGS 10/5/2010

Page 42

1 project, the Border Patrol Station project in Boulevard,  
2 and the border fence project as part of your cumulative  
3 effects on this project.

4 Bighorn sheep the guy said when he was standing  
5 right there, I seen them on the south side of the  
6 freeway, south side of Old 90. They don't know any  
7 boundaries. They go wherever the food or the water's  
8 at.

9 In your cultural studies here, I didn't see any  
10 mention of us being an archeological district. It's  
11 very rich in archeological materials and finds. There's  
12 historical and prehistoric stuff out there.

13 On the fire side, it says the impacts to -- you  
14 know, there's going to be major impacts to firefighter  
15 ability. That's true. Once those lines go in, you're  
16 going to have air resource issues, trying to get air  
17 resources in. It's going to affect ground operations.  
18 And combined with all the other projects out here, all  
19 these networks of lines that are going to go through,  
20 that's just going to make it that much worse. The only  
21 thing is remove all the vegetation underneath them, set  
22 a barrier, but that's not going to happen.

23 Socioeconomics: You say minor short-term  
24 property values. Currently property values in the area  
25 have dropped. Any more drop -- you know, people are

CLEAVES & ASSOCIATES (619) 238-1415

TRANSCRIPT OF PROCEEDINGS 10/5/2010

Page 43

1 already upside down. Any more drops, that's going to be  
2 probably major and that's going to affect what you're --  
3 that's going to change your environmental justice there  
4 too, because that is going to impact low incomes, that's  
5 going to impact minorities, all kinds of things.

6 Those are my comments at this point.

7 DR. PELL: Thank you very much, Mark. I  
8 appreciate that.

9 The next party that indicated an interest to  
10 speak was Laurie Baker. By the way, Ms. Baker, you  
11 didn't answer the question about whether you would like  
12 a copy of the final EIS.

13 MS. LAURIE BAKER: If I can get it online, that  
14 would just be okay.

15 DR. PELL: Great.

16 MS. BAKER: My name is Laurie Baker. I live in  
17 Santee. I can --

18 UNIDENTIFIED VOICE: Use the microphone,  
19 please.

20 MS. BAKER: Sorry. I come out to this area to  
21 hike and we camp and we jeep out here. And I've made  
22 some comments previously. I was confused about what  
23 exactly this covered because of the cumulative impacts.  
24 I didn't know if it covered the Tule and Indian  
25 reservation and some of the -- this map right here.

CLEAVES & ASSOCIATES (619) 238-1415

TRANSCRIPT OF PROCEEDINGS 10/5/2010

Page 44

1 My comments are that the transmission line  
2 would annihilate ten acres of vegetation and wildlife,  
3 and I know they're going to compensate for that with  
4 land somewhere else, but that doesn't help the  
5 vegetation, wildlife in that particular area, and I  
6 consider that a major destruction in this area.

7 It's still a major fire igniter. So if there's  
8 a fire, it will spread to areas that surround the area  
9 where the bighorn sheep and the golden eagles, the  
10 people live, so there is no boundaries sometimes for  
11 these fires. So the amount of miles something is from  
12 the ignition source or the specific project could be a  
13 lot bigger and affect the environment that way.

14 My main concern is the large-scale wind  
15 turbines. There's no mitigation for them I understand,  
16 and it will change the visual character out here. And  
17 cumulatively if you put a lot of those wind turbines out  
18 here, it's going to regionally change the character of  
19 the whole area. So you have the visual character and  
20 then you have the whole regional character that will be  
21 affected by these wind turbines which have no mitigation  
22 because they're so big. And when you come out here --  
23 if you go on the Web site for the BLM, they highlight  
24 expansive and scenic views out here and they'll list all  
25 these different places. That's one of the main points

CLEAVES & ASSOCIATES (619) 238-1415

TRANSCRIPT OF PROCEEDINGS 10/5/2010

Page 45

1 they make, are the scenic views out here.

2 And the beauty is stark and striking. And if  
3 you're going to change from this rural designation  
4 that's out here and industrialize it, a lot of people  
5 like myself won't want to come out here anymore because  
6 that's what we come out here for, the wildlife, the  
7 vegetation.

8 And from the pictures that you have here, it's  
9 a major impact, and I don't know if something like that  
10 stops a project. I know that the character of the  
11 Cleveland National Forest was impacted by the Powerlink,  
12 and they changed mitigation measures and made exceptions  
13 and went forward with the project. I'm not sure if they  
14 can do that with this project, and that is one of my  
15 concerns.

16 And so we love this area. We love to come  
17 here, and this would really change the area  
18 dramatically. And that's just what I want to say.

19 DR. PELL: Thank you very much. I appreciate  
20 it.

21 The last person that indicated a desire to  
22 speak on the registration form is Kevin Smith.

23 MR. KEVIN SMITH: Hello. How are you doing?  
24 My name is Kevin Smith. I'm a developer and San Diego  
25 ratepayer.

CLEAVES & ASSOCIATES (619) 238-1415

1 I've never quite seen an EIR that had no  
2 impact. It's kind of amazing, actually. My hat's off  
3 to you. I'm going to have to read from my phone because  
4 I typed it on the way.

5 I believe the Sunrise Powerlink was pushed by  
6 SDG&E for one simple reason: To provide Sempra an  
7 interconnect. Sempra was there for their -- was, per  
8 their application, to build an interconnection on both  
9 sides of the border that would carry the line to the  
10 existing south link, South Powerlink. There is no  
11 capacity on the South Powerlink. Why would Sempra be  
12 allowed to interconnect into a transmission line with an  
13 estimated 1,200 megawatts, into a transmission line that  
14 has no capacity?

601-7

15 Their own comments at the opening of this  
16 meeting is that there was a request of Sempra and not  
17 SDG&E. If this is true, then the ECO Substation is  
18 Sempra's cost. SDG&E is using the right of condemnation  
19 to build the ECO Substation for Sempra. Sempra has no  
20 right of condemnation. How did SDG&E become obligated  
21 to do the interconnection for Sempra? Sempra's to  
22 provide one mile of transmission, an interconnection tie  
23 line as you call it. That ended their responsibility in  
24 the middle of nowhere. Lucky they have SDG&E to build  
25 their substation just where they need it.

**RESPONSE TO 601-7:** Refer to the response to comment 108-4 for discussion of the reasons why the Sunrise Powerlink is not considered a connected action for this EIS.

TRANSCRIPT OF PROCEEDINGS 10/5/2010

Page 47

601-7  
1 They also say there's a 230- or a 500-kVA line.  
2 They don't know? The substation, the ECO substation,  
3 will be a 500 kVA. They're going to be pushing all  
4 1,200 megawatts into that substation and then they'll  
5 upgrade it and push it into Boulevard and will provide  
6 the capacity to feed all 1,200 megawatts into the  
7 Sunrise Powerlink. None of the power generated by  
8 Sempra into La Rumorosa will or can go into the South  
9 Powerlink as the EIR states.

10 The Sunrise Powerlink will be paid for by the  
11 ratepayers of SDG&E. It costs \$2 billion. It's simply  
12 a cost of the interconnection for Sempra. The San Diego  
13 residents should have never been allowed to be burdened  
14 with Sempra's cost, and it is a flagrant abuse of the  
15 China Wall. Thank you.

16 DR. PELL: Kevin, do me a favor. You indicated  
17 on here that you would like a copy of the final EIS, but  
18 I must tell you that --

19 MR. SMITH: I got it.

20 DR. PELL: No, no. You said you wanted a copy  
21 of the final.

22 MR. SMITH: The final.

23 DR. PELL: That's the draft. But your  
24 handwriting, your address and your e-mail address, are  
25 not legible. Could you do me a favor. Take this back

CLEAVES & ASSOCIATES (619) 238-1415

**RESPONSE TO 601-8:** Regarding reported sightings of bighorn sheep, refer to the response to comment 108-7.

TRANSCRIPT OF PROCEEDINGS 10/5/2010

Page 48

1 and --

2 MR. SMITH: If you have a card, I'll e-mail it  
3 to you. Can I --

4 DR. PELL: Sure.

5 MR. SMITH: Yeah, it's right there. I'd still  
6 like a card. Thanks.

7 DR. PELL: Thank you.

8 MR. SMITH: Thank you.

9 DR. PELL: I just got a new addition,  
10 Ben Schult, S-c-h-u-l-t, with The Desert Tower; is that  
11 correct?

12 MR. BEN SCHULTZ: My name is Ben Schultz. I'm  
13 the owner of Desert View Tower. We're a Federal  
14 Registered historic site, two --

15 UNIDENTIFIED VOICE: Use the microphone.

16 MR. SCHULTZ: I'm sorry. I hate this sort of  
17 thing and I don't want to do it. Ben Schultz. I'm the  
18 owner of the Desert View Tower. We're a Federal  
19 historic registered letter, two State historic sites,  
20 and a County historic site for Imperial and San Diego  
21 County.

601-8

22 First off, I didn't think this would come up as  
23 an issue. I want to support the issue of the bighorn  
24 sheep and their proximity to this project. I have a  
25 card that I actually sell commercially showing bighorn

CLEAVES & ASSOCIATES (619) 238-1415

TRANSCRIPT OF PROCEEDINGS 10/5/2010

Page 49

1 sheep within three miles of that project. I did not  
2 realize I had to bring it in today.

3 I've actually seen bighorn sheep walking on the  
4 freeway, called in several even federal departments to  
5 try and get them off the freeway. There's no question  
6 the big bighorn sheep are in the area.

7 I was also aware of a biological survey that  
8 was done. The woman was from Massachusetts and spent  
9 two weeks here looking over the area. Massachusetts was  
10 not -- this is not a San Diego researcher. She was out  
11 here, spent two weeks, and the bighorn sheep weren't  
12 there. They only come down here mainly at Christmastime  
13 and about now.

14 So I suppose I can get the gentleman over there  
15 a picture of the bighorn sheep at the Desert View Tower,  
16 which is within a three-mile range of the whole thing.  
17 So I hope that establishes that. The biological survey  
18 was done not inadequately.

19 Secondly, I'd just like to point out that  
20 you're trying to characterize this as separate from  
21 these other projects, a simple, clean hearing on this  
22 one aspect of the project. I think the idea that you  
23 would ignore the fact that you know that this has been a  
24 corrupt project from the beginning including the  
25 prostitutes that got the head of the -- who was the man

CLEAVES & ASSOCIATES (619) 238-1415

Volume 3  
Comments and Responses

---

TRANSCRIPT OF PROCEEDINGS 10/5/2010

Page 50

1 who resigned who was the chairman of the energy  
2 committee in the public?

3 MS. TISDALE: I can't remember his name.

4 MR. SCHULTZ: Yes, hired by Sempra at \$200,000.

5 I mean, can you sit there and pretend that you didn't  
6 hear that little story? Maybe you didn't.

7 The fact is there is going to be a grand jury  
8 hearing on this sooner or later on this, and all we can  
9 do as public citizens sitting around having these little  
10 talks up against million-dollar lawyers is to remind you  
11 that we will remember that you were part of a corrupt  
12 process and that some day possibly justice will be done.  
13 We know you're part of this process, too. Your names  
14 are on the site. Sooner or later there is going to  
15 be -- your children are going to be looking up at you  
16 like, "Why were you part of that, Daddy?" Thank you  
17 very much.

18 DR. PELL: Ben, is it S-c-h-u-l-t-z or just --

19 MR. SCHULTZ: Yes.

20 DR. PELL: -- S-c-h-u-l-t?

21 MR. SCHULTE: I don't particularly want to be  
22 on your list because I feel like I don't -- over the  
23 years I'll be on some damn list.

24 DR. PELL: No, that's fine. If you don't want  
25 to be on the list --

CLEAVES & ASSOCIATES (619) 238-1415

TRANSCRIPT OF PROCEEDINGS 10/5/2010

Page 51

1 MR. SCHULTZ: I don't like it.

2 DR. PELL: -- consider yourself off the list.

3 MR. SCHULTZ: Throw it away.

4 DR. PELL: Okay. You just saved us an extra  
5 mailing.

6 That completes the list of people that  
7 indicated that they wanted to speak.

8 Is there anybody else that would like to speak  
9 now? Because it's open mic time.

10 MR. MARTIN: Can I just say something real  
11 quick? There's a Web site that Sempra has for their  
12 projected plan in this area. It's not what you have up  
13 here. It's like 1,000 wind machines and it shows the  
14 transformers. It shows this line, the EIS line you're  
15 talking about. It's on the Sempra -- if you do a  
16 Google, search for Sempra proposed or Table Mountain,  
17 Google that, it's going to show you this just elaborate,  
18 industrialized power scheme that's just unfathomable.

19 I mean, it's just like why would they put that  
20 there, you know?

21 MR. SCHULTZ: But you don't know anything about  
22 it.

23 DR. PELL: Hold it.

24 MR. MARTIN: Sempra should be here with a photo  
25 showing that. What their real plan is is just to

CLEAVES & ASSOCIATES (619) 238-1415

1 inundate this whole area with alternative energy to ship  
2 it to San Bernardino, Riverside, L.A., or wherever.

3 DR. PELL: Excuse me. For the record, you are?

4 MR. MARTIN: Derik Martin.

5 DR. PELL: By the way, Semptra is here.

6 MR. MARTIN: Yeah. Where is the picture? They  
7 should have that picture from their Web site that shows  
8 what they really want to do to this area, because it's  
9 not 52 wind machines.

10 DR. PELL: The Environmental Impact Statement  
11 makes it very clear that this is just the first phase of  
12 the build-out. We do acknowledge the fact that the  
13 overall projected ultimate build-out of the wind machine  
14 farm in Baja is about 1,200 megawatts, so --

15 MR. MARTIN: Well, where is the photo?

16 DR. PELL: That's very clearly stated in the  
17 EIS and there's even a diagram in the EIS of the overall  
18 development area that Semptra's indicated would be their  
19 future build-out. So whatever information that is  
20 available has been documented.

21 Who else wanted to speak, please? Just a  
22 second. Yes?

23 MS. LORRIE OSTRANDER: My name is  
24 Lorrie Ostrander. I'm a Jacumba resident, and my  
25 concern is a fib that was given. We were told that a

TRANSCRIPT OF PROCEEDINGS 10/5/2010

Page 33

1 mile up the road, about a mile and a quarter up the  
2 road, people from Washington, Arizona, and through other  
3 states were out there drilling, and finally I asked what  
4 was the drilling all about. Well, they were doing some  
5 ground testing for the Sempra project that was going on  
6 over the mountain. Why over here? For some reason they  
7 couldn't do it over there, but they did it right close,  
8 oh, about 1/16 of a mile away from our well. I don't  
9 appreciate that. I don't appreciate being lied to.

10 UNIDENTIFIED VOICE: They're good at that.

11 DR. PELL: Okay.

12 MS. OSTRANDER: And we were lied to. The  
13 testing was supposed to be done over there. This is  
14 only the beginning of -- and like giving them water,  
15 it's the beginning. Sorry, we're not dummies. We see  
16 what goes on in Washington. We see what goes on in  
17 other states.

18 I seen what happened in my own hometown up in  
19 Northern California and now all these wind turbines are  
20 just sitting there, half the times never being used. I  
21 see over there at the reservation, sadly to say, our  
22 ancestors are turning over because they're throwing the  
23 land away. They don't look at the golden eagle. We  
24 respect the bald eagle because it's our symbol of our  
25 country, so is the golden eagle because it is part of

Page 34

1 the eagle family.

2 Our trees, we're already destroying our climate  
3 with the weather change and everything, so let's do  
4 more.

5 Can we resolve this? Yes. Cut back on your  
6 energy. If you don't need it, if the sun is shining,  
7 don't turn a light on. I was raised that way. You  
8 leave a room, shut the light off. You're not watching  
9 TV, shut it off. There are ways to save energy and not  
10 destroy the water that we need, the land that we need,  
11 the air that we need, and I'm sorry I'm boring you.

12 DR. PELL: No.

13 MS. OSTRANDER: No? The gentleman next to you.

14 DR. PELL: No.

15 MS. OSTRANDER: But anyway, I just see a lot  
16 going on and I've lived up here in the mountain for  
17 20 years, just shy of 20 years. For the first time I  
18 have seen the mountain sheep, for the first time over by  
19 Kitchen Creek. I'm on my way into town. Not even  
20 50 feet away from the freeway road was a male and a  
21 female bighorn. I broke down in tears because they're  
22 being pushed away from their feeding grounds because  
23 why? Man has to have more power. Man doesn't have to  
24 have it.

25 DR. PELL: Could you --

CLEAVES & ASSOCIATES (619) 238-1415

TRANSCRIPT OF PROCEEDINGS 10/5/2010

Page 35

1 MS. OSTRANDER: Laurie Ostrander, resident of  
2 Jacumba and very proud to be here and fighting against  
3 this.

4 DR. FELL: Thank you.

5 MS. OSTRANDER: Thank you, sir.

6 DR. FELL: You're more than welcome.

7 Ms. Tisdale, you wanted to talk?

8 MS. TISDALE: I have two things. I forgot to  
9 mention when you leave here tonight, I would like you to  
10 look on the hillside. You'll see the five existing  
11 turbines' red lights. They blink at an odd pattern and  
12 if we see -- just, you know, multiply that by the number  
13 of turbines that are proposed and that will be the  
14 nighttime vision here.

15 And then I had something I wanted to show you  
16 on the map. The Campo Wind Energy proposal goes all the  
17 way down to the Mexican border. It doesn't stop right  
18 here. There's huge wind energy proposals that are shown  
19 on the BIM maps all throughout here. It's about 15,000  
20 or more acres. There's met towers in the Cleveland  
21 National Forest, and there are wind energy proposals  
22 along the Tierra del Sol Road. Boulevard just hasn't  
23 announced them yet.

24 Hamann Companies is proposing solar on their  
25 property where they're also doing Tule Wind, so there's

CLEAVES & ASSOCIATES (619) 238-1415

Volume 3  
Comments and Responses

---

TRANSCRIPT OF PROCEEDINGS 10/5/2010

Page 36

1 a lot of stuff that is just kind of still under the  
2 radar and it's very disturbing that it won't be included  
3 as overall impacts because there's much more than has  
4 been publicly announced, but it's in the works waiting.

5 DR. PELL: Any documentation you have that  
6 you'd like to submit would be appreciated.

7 MS. TISDALE: I will.

8 DR. PELL: Thank you.

9 UNIDENTIFIED VOICE: The attorney will submit  
10 it.

11 MR. SMITH: I'd like to speak again if you  
12 don't mind.

13 DR. PELL: Sure.

14 MR. SMITH: Because I can actually just verify  
15 exactly what she said is true, because I am actually a  
16 wind developer or tried to be, except it's -- I guess  
17 it's not for anybody other than Sempra. And so I can  
18 actually verify that Tule, Lansing, Boulevard, as an  
19 owner of one of the properties up here I was actually  
20 involved in and it's definitely happening.

21 DR. PELL: And again for the record, you are?

22 MR. SMITH: Kevin. That's all.

23 DR. PELL: Anybody else like to speak? Thanks,  
24 Kevin. Anybody else? We still have time. It's 8:26.  
25 I just want to make sure you all feel that you had

CLEAVES & ASSOCIATES (619) 238-1415

TRANSCRIPT OF PROCEEDINGS 10/5/2010

Page 57

1 adequate opportunity to comment. And if you did, I want  
2 to thank you for joining us tonight. I want to thank  
3 you for your thoughts. And if you want to hang around  
4 and talk to Semptra people or to my consultants or me,  
5 I'm glad to have you do that.

6 And with that, I may see some of you tomorrow  
7 night in Boulevard. If I do, great. If not, it's been  
8 a pleasure. Thank you.

TRANSCRIPT OF PROCEEDINGS 10/6/2010

Page 3

1 BOULEVARD, CA, WEDNESDAY, OCTOBER 6, 2010, 7:15 P.M.

2

3 DR. PELL: Good evening. Some of you were here  
4 last night at Jacumba. Those of you that were here  
5 before, welcome back. Hopefully you will contribute  
6 something new and different tonight.

7 Let me tell you about what we're doing here  
8 tonight. Let me identify myself first. I'm Dr. Jerry  
9 Pell. I'm an environmental scientist with the  
10 Department of Energy in Washington.

11 We're here because we have at DOE received an  
12 application for a Presidential permit, which I'll  
13 explain in a moment, for a transmission line that  
14 proposes to bring wind power from a new wind farm in  
15 Baja California to the southern area of San Diego; and  
16 that transmission line, because it would cross the  
17 border between Mexico and the United States, requires  
18 the granting of a so-called Presidential permit.

19 It's called a Presidential permit because it  
20 arose from an executive order from the White House  
21 requiring it, and that executive order was issued about  
22 50 years ago, so it's not something new from this  
23 administration. It's been with the government for many  
24 years. And the office that handles it has now ended up  
25 at DOE where I am.

CLEAVES & ASSOCIATES (619) 238-1415

1           So the matter of deciding whether or not to  
2 grant a Presidential permit is considered a major  
3 Federal action, and because of that it means that we're  
4 required to adhere to the National Environmental Policy  
5 Act, NEPA, N-E-P-A, which means that we have to do an  
6 environmental analysis.

7           There are three levels of environmental  
8 analysis that any project can have. The simplest one is  
9 what's called a categorical exclusion where you know  
10 there are no potential impacts and all you have to do is  
11 essentially write a memo to the file. The middle level  
12 is called an environmental analysis, and the most  
13 comprehensive, complete version of an environmental  
14 review is the Environmental Impact Statement which we're  
15 discussing here tonight.

16           You will recall that this project, if you've  
17 been following it from its beginnings, did start as an  
18 environmental assessment but has now developed into a  
19 full-fledged EIS; and the draft that was issued on  
20 September 17 is the reason why you're here tonight,  
21 because we want to hear your comments on what you think  
22 about the draft, its completeness, its adequacy, its  
23 technical correctness.

24           What we're not looking for is whether or not  
25 specifically you think the project is a good project or

TRANSCRIPT OF PROCEEDINGS 10/6/2010

Page 5

1 whether the project is needed, because that's outside  
2 environmental review. That's the kind of thing that  
3 would be best brought before your State and County  
4 officials where they would be able to consider those  
5 kinds of issues. We would not at DOE because it's a  
6 private sector project. So it's up to the applicant for  
7 them to decide whether or not it economically makes  
8 sense, whether it's needed or not, or whether it's going  
9 to be profitable. It's not a governmental issue.

10 So I want to start off with a brief slide show.  
11 You should have, if you picked it up at the registration  
12 counter in the kitchen, you should have a copy of the  
13 slide show. It looks like this. And the slides I'm  
14 going to show are exactly this, so I'm going to go  
15 through them very quickly just to summarize things and  
16 then we'll go into the actual comment period of the  
17 hearing.

18 By way of further introduction, as I was  
19 saying, I'm an environmental scientist. I've been doing  
20 environmental work for 40 years and I've been with DOE  
21 for 34. I started just after the original Arab oil  
22 embargo, and the only reason I haven't retired is  
23 because I like what I do and I especially like meetings  
24 just like this one where I can meet with you, so I'm  
25 glad to be here tonight.

CLEAVES & ASSOCIATES (619) 238-1415

1           Let's go to the second slide, Tim. As I was  
2 saying, as I just finished saying, the proposed Federal  
3 action is whether or not to issue the Presidential  
4 permit. We have a cooperating agency. Patrick Brown is  
5 to my right and I'll introduce him in just a moment.  
6 And as you will see in a couple of slides, the County of  
7 San Diego has a separate process that they follow which  
8 Patrick will review in just a couple of minutes.

9           I started mentioning before this section, "NEPA  
10 Process to Date," that this started as an environmental  
11 assessment, the original application to DOE,  
12 December 2007, so it's been almost three years from the  
13 time the initial application was submitted to the  
14 issuance of the final Environmental Impact Statement.  
15 And it was issued on the 17th.

16           The public comment period closes on November  
17 the 1st. So regardless of what you say tonight or what  
18 you hand us in tonight, you still have plenty of time to  
19 send in additional information. How you send it in  
20 doesn't matter. It's going to be given the same weight,  
21 whether it's spoken or written or e-mailed. It really  
22 makes no difference. It still gets the same review.

23           Next slide, Tim. So once the public comment  
24 period closes -- all of the comments are going to be  
25 public. So whatever you give us will be put on the Web

TRANSCRIPT OF PROCEEDINGS 10/6/2010

Page 7

1 for you to see, for everyone to see what everybody else  
2 said. The court reporter's transcript of the hearings  
3 will be on the Web site, also.

4 We will then enter the final EIS preparation  
5 stage of the process which is the point where we take  
6 all your comments under consideration and modify the EIS  
7 or revise it or update it, whatever is required to  
8 comply with the comments that you've made.

9 That leads to the final document. Once the  
10 final document is issued, the Department of Energy then  
11 will start preparing a Record of Decision, which is  
12 basically just how it sounds. It's the formal document  
13 that describes whether or not DOE decided to actually  
14 issue a Presidential permit and also whether there are  
15 any conditions attached to that Presidential permit.

16 If the agency does issue a positive Record of  
17 Decision, i.e., a Record of Decision recommending the  
18 issuance of the Presidential permit, then the  
19 Presidential permit itself would be issued immediately  
20 thereafter. So that's essentially the process.

21 And if you're asking how long it takes to  
22 prepare the final EIS, I can't really answer that  
23 because it depends on the nature of the comments that we  
24 receive from you between now and the 1st of November.  
25 Depending on the nature of the comments and how much

CLEAVES & ASSOCIATES (619) 238-1415

Volume 3  
Comments and Responses

---

TRANSCRIPT OF PROCEEDINGS 10/6/2010

Page 8

1 additional analysis is required, that will drive how  
2 long it takes for us to complete the final EIS.

3 Now, let me introduce Patrick Brown who's with  
4 the County of San Diego, and I'll let him introduce  
5 himself and describe the County process.

6 MR. BROWN: Hi. Thank you everybody for coming  
7 tonight and everybody who came last night, welcome back  
8 again and I guess I'll see you tomorrow at the planning  
9 department.

10 I'm Patrick Brown. I'm a land use  
11 environmental planner for the County of San Diego. I  
12 work for the Department of Planning and Land Use. I'm  
13 also a project manager for the renewable energy projects  
14 for the County, so I'm also the project manager of the  
15 Tule Wind project, which I'm sure many of you are  
16 familiar with, and the ESJ project.

17 The County is a cooperating agency with DOE on  
18 this permit, and the reason why we're a cooperating  
19 agency is our actions basically layer almost right on  
20 top of each other. What Jerry's permitting is the  
21 action of the power going across the border. What the  
22 County would be permitting is the actual construction  
23 and operation of the generation-tie line itself. So  
24 it's actually two different permits that are being  
25 issued, but they're almost one and the same. That's why

CLEAVES & ASSOCIATES (619) 238-1415

TRANSCRIPT OF PROCEEDINGS 10/6/2010

Page 9

1 the County participated as a cooperating agency to have,  
2 you know, our environmental review basically be similar  
3 in a way.

4 The County's actually participating with the  
5 California Public Utilities Commission on a joint  
6 Environmental Impact Report and Environmental Impact  
7 Statement on what they call the East County Substation  
8 project. Are many of you familiar with that? Yeah.  
9 Okay.

10 So the environmental review that the County  
11 would use in its permitting process, which in this case  
12 for the generation-tie line would be a Major Use Permit  
13 which the first hearing body would be the planning  
14 commission and then on appeal would go to the Board of  
15 Supervisors, the County would rely on the East County  
16 Substation Environmental Impact Report to do its  
17 permitting. So although Jerry is doing this  
18 environmental review here, the County would not rely on  
19 this document at this point, you know, for its  
20 permitting discretionary process.

21 Now, in saying that, a lot of the information  
22 that Jerry and DOE and EntriX have used in this document  
23 was previously reviewed by the County. So when they  
24 submitted their application to DOE -- well, years later,  
25 basically in 2009 -- Sempra came in and submitted their

CLEAVES & ASSOCIATES (619) 238-1415

Volume 3  
Comments and Responses

---

TRANSCRIPT OF PROCEEDINGS 10/6/2010

Page 10

1 Major Use Permit application with the County, and we  
2 began a sort of environmental review of the technical  
3 studies to the County's standards and our guidelines in  
4 determining significance and County noise ordinance and  
5 lighting ordinance and different, you know, mechanisms  
6 stuff as that.

7 We did do a lot of the review of that, and that  
8 information has been reviewed. I mean, it's not  
9 accepted in final by any means, but the County did  
10 review a lot of those technical studies like three times  
11 and got a lot of good changes done to that, and that's  
12 what Entrix used to develop this. So that's how we  
13 participated at this point with DOE on their action, but  
14 in saying that, we are participating with the PUC and  
15 ELM on the other document which is the one that we'll  
16 actually use.

17 Now, that document is not anticipated to come  
18 out probably until sometime in the next couple months  
19 here. It should be probably the end of this month or  
20 November is what the schedule's telling right now. It  
21 could be later; it could be sooner. But, though, any  
22 comments that you give Jerry tonight, you can also  
23 participate in that process with the PUC, and we'll be  
24 doing the same thing. We'll be out here having, you  
25 know, probably another two or three meetings, but it

CLEAVES & ASSOCIATES (619) 238-1415

TRANSCRIPT OF PROCEEDINGS 10/6/2010

Page 11

1 won't be on this document. It will be on the  
2 East County Substation document which is the one that  
3 the County will use.

4 I believe I covered off on that. That's it.

5 DR. PELL: That's it. Okay. By the way, the  
6 Bureau of Land Management, which is a Federal agency of  
7 the Department of the Interior, invited DOE to be a  
8 cooperating agency in the ECO Sub environmental review  
9 process. So we are a cooperating agency on the ECO Sub  
10 analysis. And I can't predict what our travel budget  
11 will be like, but, if possible, I'll be back here just  
12 as an observer for the hearings on the ECO Sub, the EIS,  
13 the EIR when that's issued by the CPUC and BLM, as  
14 Patrick was saying in a month or so, I should be back  
15 here.

16 MR. KEVIN SMITH: Did that just happen? Did  
17 that just occur?

18 DR. PELL: I'm sorry. Did what just occur?

19 MR. SMITH: Did that just occur?

20 DR. PELL: Which?

21 MR. SMITH: What you just said, the ECO Sub  
22 just -- the BLM asked you to join on the ECO Sub.

23 DR. PELL: Oh, some time ago.

24 MR. SMITH: Okay.

25 DR. PELL: Yeah, sometime ago.

CLEAVES & ASSOCIATES (619) 238-1415

Volume 3  
Comments and Responses

---

TRANSCRIPT OF PROCEEDINGS 10/6/2010

Page 12

1 Kevin; right?

2 MR. SMITH: Yes.

3 DR. PELL: For the record. No, they invited us  
4 to be a cooperating agency sometime ago.

5 MR. BROWN: And, Kevin, the County is a  
6 cooperating agency with BLM on the BLM portions of the  
7 Tule Wind and ECO Sub project too, as well.

8 DR. PELL: By the way, if you're really that  
9 interested, the correspondence is a public record. So if  
10 you want to be -- I'd be glad to send you the copies of  
11 the letters. Just send me an e-mail. I think it might  
12 even be on our -- it might even be on the ECO Sub  
13 Web site. I'm just not sure.

14 MR. SMITH: Thank you very much.

15 DR. PELL: But it's all publicly and readily  
16 available.

17 Okay. So quickly, we're looking at what the  
18 project amounts to. As you probably know by now, it's  
19 to construct a transmission line, as I was saying,  
20 either 230,000 volts or 500,000 volts from the proposed  
21 wind farm across the border for about .65 miles until it  
22 connects to the proposed ECO Substation.

23 And the portion of the transmission on the  
24 Baja California side, on the Mexican side, that line  
25 runs about a mile to where it connects to the ESJ

CLEAVES & ASSOCIATES (619) 238-1415

TRANSCRIPT OF PROCEEDINGS 10/6/2010

Page 13

1 Jacumba Substation which is the first point of  
2 interconnection of the line on the Mexican side.

3 So what these diagrams -- you're not going to  
4 be able to do much with the diagrams on the screen, but  
5 in the book they're printed large and you can see them  
6 in great detail. You can see the two possible lines as  
7 to whether it's a 230- or 500-kV. The routes are very  
8 similar to each other. They're only apart by a very  
9 small amount. So the analysis looked at both, and  
10 you'll find the potential impacts from either included  
11 in the EIS.

12 Next slide, Tim. It's a very short  
13 transmission line on the U.S. side, so we're only  
14 looking -- one more. Whoop, no. Go back to the project  
15 design. There we go. On the American side, the line is  
16 about five towers in total, either lattice or monopole.  
17 We think that lattice would probably be environmentally  
18 preferred, but no decision has been made yet as to which  
19 type it will be.

20 The lattice is the standard which you usually  
21 see, like Southwest Powerline uses standard. The  
22 monopoles are just exactly what they say. It's a single  
23 pole. The book includes diagrams of both. You can see  
24 what they both look like, but it looks like the lattice  
25 type would probably blend into the background better

CLEAVES & ASSOCIATES (619) 238-1415

1 than the monopole; but, again, as I said, no decision  
2 has been made.

3           So looking at the project in Mexico, what's  
4 really important here -- next slide, Tim -- is that the  
5 nearest wind machine to the border is about .7 miles  
6 away from the border, so there is nothing further north  
7 than .7 miles. All the other wind machines that the  
8 company's proposing to build in Baja California are  
9 further south. So the closest one is about  
10 three quarters of a mile from the border.

11           The project looks like it's going to be built  
12 in phases. The proposed first phase is about 52 wind  
13 machines.

14           And in the future phases, if they actually  
15 implement them, they would proceed further south from  
16 the first, so they'd be even further away and presumably  
17 less visual and you wouldn't be able to notice them  
18 because they'd be that much further away from the  
19 border.

20           Next slide, Tim. In terms of consultation and  
21 outreach with other agencies, we've worked with the U.S.  
22 Fish and Wildlife Service. We've sent out consultation  
23 letters to about 15 Indian tribes. I think only one  
24 said that they would be interested in formally  
25 consulting with us, which was the Campo tribe, and we

TRANSCRIPT OF PROCEEDINGS 10/6/2010

Page 15

1 did do that consultation with that tribe; and they  
2 indicated that they were satisfied that all the  
3 archeological and historical considerations were  
4 properly being taken care of, so that consultation ended  
5 satisfactorily.

6 We also have been in touch with the Border  
7 Patrol, other cognizant Federal agencies like, as I was  
8 saying before, the Bureau of Land Management, Federal  
9 Aviation Administration, Environmental Protection  
10 Agency, and then the appropriate California State  
11 agencies, Fish and Game, Parks and Recs, State Historic  
12 Preservation Officer, and obviously, of course, the  
13 County itself. So the document is as thick as it is  
14 because it's as comprehensive as we could possibly make  
15 it within reason to make sure that we basically did it  
16 correctly and completely.

17 And this slide which looks at the environmental  
18 issues analyzed shows you the scope of the analysis. We  
19 looked at every kind of environmental impact that's  
20 normally considered under the National Environmental  
21 Policy Act, everything from biological resources to  
22 socioeconomics and environmental justice. So we feel  
23 like it's quite complete. And, in fact, we even looked  
24 at air quality, including carbon dioxide emissions  
25 because of the concerns of global climate change.

TRANSCRIPT OF PROCEEDINGS 10/6/2010

Page 16

1 Just to summarize quickly what the impacts were  
2 that we found, under "Biological Resources," permanent  
3 disturbance from the project to about ten acres, and if  
4 you look at the lower slide on the right you'll see a  
5 green vertical line. That's an offset area the  
6 company's proposing to preserve to compensate for the  
7 ten acres of disturbed land, and that would be done in  
8 conjunction with the cooperation of the Bureau of Land  
9 Management. And it's described in great detail in the  
10 volume.

11 Next slide. Now, "Special Status Species,"  
12 which I know you're quite interested in, just to  
13 summarize what we found, the Quino checkerspot  
14 butterfly, no impacts expected; California condor, very  
15 low probability; Peninsular bighorn sheep, and I know  
16 this is controversial from what we heard last night,  
17 critical habitat for the bighorn sheep is avoided by the  
18 project by a distance of at least two miles. And for  
19 the arroyo toad, the southwestern willow flycatcher, and  
20 the Least Bell's Vireo, which is a bird, low potential  
21 for effect.

22 And the other major area of concern to some of  
23 you, next slide, is visual impacts, visual resources,  
24 and we retained the services of a professional  
25 consulting firm that specializes in doing exactly this

CLEAVES & ASSOCIATES (619) 238-1415

TRANSCRIPT OF PROCEEDINGS 10/6/2010

Page 17

1 kind of analysis where they go to what they call Key  
2 Observation Points, or KOPs, and draw a visual  
3 representation of what they think you would see if the  
4 project were completed from those particular KOPs; and  
5 the County of San Diego was a major reviewer of that  
6 work, and so we have a lot of faith in the quality and  
7 accuracy of that analysis. And this is where it was  
8 determined that the lattice towers are probably  
9 preferable to monopoles which is a result of that study.

10 And looking at the next slide, which is also  
11 with regard to visual resources, we looked at some of  
12 the possible mitigation that could be made to reduce the  
13 visual appearance of the transmission line, and you can  
14 just read that for yourself.

15 The slide after that is the heart of the EIS.  
16 This is the single-most important table in the entire  
17 report, and this is the summary of impacts by resource  
18 area. So if you read nothing else, you certainly want  
19 to at least study this Table 2-3 because this is where  
20 the entire analysis is summarized in the document. And  
21 it goes on for several pages in the report.

22 Now, next slide, as I was saying, we look for  
23 your comments. You all have copies of the document.  
24 Anybody who you come across that wants a copy can  
25 readily obtain one. It's available electronically on

CLEAVES & ASSOCIATES (619) 238-1415

Volume 3  
Comments and Responses

---

TRANSCRIPT OF PROCEEDINGS 10/6/2010

Page 18

1 the Internet on the project Web site. It's on the DOE  
2 NEPA Web site. And if anybody needs a paper or CD copy,  
3 we'd be glad to supply that.

4 The project Web site, esjprojecteis.org, has a  
5 provision on it for submittal of comments electronically  
6 which we think would really be great if you used it.  
7 You can upload attachments on the Web site directly. So  
8 if you want to send us Word files or Excel files or  
9 graphics files, whatever, you can actually upload those  
10 directly to our Web site from that Web page which you  
11 see mentioned there, esjprojecteis.org/involvement. You  
12 can also send them to me directly by e-mail or however  
13 you wish.

14 Now, we said earlier that the comment period  
15 closes on the 1st of November, but there's a but. And  
16 the but is if you simply can't make it by November the  
17 1st for whatever reason or if you submit comments and  
18 then come across something that you think is really  
19 important that we should know about, we will still  
20 entertain your comments if they come in late to the  
21 extent that we can.

22 In other words, if we're at the printer with  
23 the final EIS and you send us in a comment, we won't be  
24 able to do anything about it. If you send us in a  
25 comment on November the 5th instead of November the 1st,

CLEAVES & ASSOCIATES (619) 238-1415

TRANSCRIPT OF PROCEEDINGS 10/6/2010

Page 19

1 we'll still be able to use it. So that November the 1st  
2 date is the date we would certainly hope you submit your  
3 comments by, but if you miss it, all is not lost. Okay?  
4 We're trying to be as flexible with you as we possibly  
5 can.

6           And if you want to reach any of us, we're all  
7 available to you by e-mail, by telephone. We're  
8 certainly giving you all the information you need to  
9 contact any of us. Entrix, that is Mr. Tim Murphy  
10 sitting over here, is the company that has been doing  
11 the actual writing of the EIS, and they're here. And if  
12 you want to talk to any of the experts that are here  
13 tonight -- Sempra's here tonight -- after the hearing,  
14 they certainly would be willing and glad to talk with  
15 you. So if you want to reach us, there's certainly no  
16 difficulty in doing that. And that completes the slide  
17 show.

18           And what I'd like to do now is actually go to  
19 the most important part of the meeting which is to  
20 take the formal comments. Here's another copy of  
21 entries. Thank you.

22           Are there any representatives, any elected  
23 officials here from State, local, Federal, whatever?

24 No. Okay.

25           Any government agency officials, County?

CLEAVES & ASSOCIATES (619) 238-1415

Volume 3  
Comments and Responses

---

TRANSCRIPT OF PROCEEDINGS 10/6/2010

Page 20

1 State? Okay. As a courtesy, we usually extend first  
2 opportunities to speak to elected officials or the  
3 government officials.

4 Now, Donna, you had indicated by e-mail that  
5 you wanted to be on the list to speak tonight and last  
6 night; is that not correct? Did you not want to speak  
7 tonight?

8 MS. TISDALE: Yes, I did.

9 DR. PELL: So then if that's the case, you're  
10 first up.

11 MS. TISDALE: Great. I don't like to turn my  
12 back to people. First of all, I do thank you for being  
13 here, but I'm getting really tired of having to defend  
14 our community from so many obnoxious projects. It's  
15 getting overwhelming.

16 And I also wanted to point out the beautiful  
17 picture on the wall there. The moon is rising over  
18 Sierra Juarez. So if those turbines were there -- this  
19 is from Boulevard -- those turbines would be  
20 silhouetted, some of them, on that ridgeline. And I  
21 also want to say that I can personally see the  
22 five turbines that are on the ridge now on the Sierra  
23 Juarez ridgeline from my ranch in Boulevard on Tierra  
24 del Sol area which is miles away, and especially at  
25 night you can see those lights.

CLEAVES & ASSOCIATES (619) 238-1415

TRANSCRIPT OF PROCEEDINGS 10/6/2010

Page 21

1 I wanted to say I'm representing myself,  
2 Donna Tisdale, as an individual, representing the  
3 Boulevard Planning Group, Backcountry Against Dumps, and  
4 the Protect our Communities Foundation. I'm also a  
5 member of the East County Community Action Coalition and  
6 the San Diego Sierra Club.

7 These comments are in addition to the ones that  
8 I made last night, and those will be submitted in  
9 writing by me and by the attorney representing several  
10 of the groups just mentioned. All the groups mentioned  
11 have voted to oppose the ESJ project in its entirety,  
12 and I did print this out for the reporter.

13 Industrial wind energy is not free as it's  
14 often implied. It carries huge financial costs and  
15 negative impacts to the environment, humans, wildlife,  
16 and livestock. Those effects are being felt worldwide  
17 resulting in a public backlash. Later this month a  
18 group of doctors and other professionals are holding an  
19 international symposium in Canada on the negative health  
20 impacts from wind turbines.

21 DR. PELL: Excuse me, Donna. I'd be very  
22 interested in learning about that if you have any  
23 information you could send me.

24 MS. TISDALE: I will send you the link.

25 DR. PELL: Please.

CLEAVES & ASSOCIATES (619) 238-1415

Volume 3  
Comments and Responses

---

TRANSCRIPT OF PROCEEDINGS 10/6/2010

Page 22

1 MS. TISDALE: ESJ will impact Boulevard despite  
2 the fact that the project turbines will be installed in  
3 Mexico. Along with the related Boulevard Substation  
4 expansion, visual impacts from ESJ and Kumeyaay Wind  
5 will be used by decision makers to claim that the visual  
6 resources are already degraded so it's okay to install  
7 even more giant wind turbines here along with all the  
8 necessary transmission line substations. Our  
9 backcountry will be the ultimate rural sacrifice zone,  
10 and the cumulative impacts to a wide variety of  
11 resources will only multiply.

12 Alleged benefits of wind energy do not outweigh  
13 the negative impacts of local human and natural  
14 communities and to both utility ratepayers and U.S.  
15 taxpayers. Intermittent wind energy projects require an  
16 almost equal number of megawatts of gas-fired backup or  
17 other base load generation to balance the transmission  
18 grid for when the wind does not blow.

19 Claims that wind energy will reduce greenhouse  
20 gases need be backed up with documentation. Multiple  
21 reports show no net reduction in greenhouse gases from  
22 wind energy.

23 SDG&E's Michael Niggli was quoted in the  
24 San Diego Union on May 23rd --

25 DR. PELL: Excuse me. What was the name of

CLEAVES & ASSOCIATES (619) 238-1415

TRANSCRIPT OF PROCEEDINGS 10/6/2010

Page 23

1 that person again?

2 MS. TISDALE: Michael Niggli.

3 DR. PELL: Can you spell that for the reporter?

4 MS. TISDALE: Michael N-i-g-g-l-i.

5 DR. PELL: Thank you.

6 MS. TISDALE: -- was quoted in The San Diego  
7 Union-Tribune on May 23rd of this year saying, quote,  
8 People need to understand the intermittency challenge we  
9 have. Wind comes and goes, and on the hottest days of  
10 the year there's no wind, and you still need to provide  
11 power to your customers. These resources are not under  
12 our control but under the control of nature, unquote.  
13 And gas plants take up that slack and Semptra provides  
14 that gas. That's very convenient and very profitable.

15 More wind energy has actually resulted in more  
16 gas and coal-fired generation including in China,  
17 Germany, and Spain. Utility ratepayers and taxpayers  
18 pay a much higher price for an intermittent and  
19 unreliable energy resource and the necessary backup  
20 generation with all the related infrastructure.

21 A cost-benefit analysis should be done for all  
22 industrial wind energy projects, including Energia  
23 Sierra Juarez. Despite the fact that the turbines will  
24 be built in Mexico, the wind energy is for export only  
25 to California and impacts of that energy production will

CLEAVES & ASSOCIATES (619) 238-1415

1 be felt in both countries. Those impacts would not  
2 occur without the Presidential permit for the necessary  
3 power line.

4 With impacts from connected actions and  
5 cumulative wind, solar, and transmission projects in  
6 addition to ESJ, there will be reduced property values,  
7 loss of rural community character, and quality of life  
8 overall. ECO tourists will no longer want to visit our  
9 area and spend their money here.

10 All the studies that show wind energy and the  
11 related infrastructure does not reduce property values  
12 have been funded by the wind industry or  
13 government-related groups that are pushing wind  
14 industry. Studies produced by experienced real estate  
15 appraisers do show significant property value impacts.

16 DR. PELL: Do you have access to any of those  
17 studies, Donna?

18 MS. TISDALE: Yes, I do.

19 DR. PELL: Will you share those with us,  
20 please?

21 MS. TISDALE: Yes, I will.

22 DR. PELL: Okay. Thank you.

23 MS. TISDALE: The increased number of 400- to  
24 500-foot turbines, power lines, transformers, and  
25 substations result in an increased risk of wildfire and

TRANSCRIPT OF PROCEEDINGS 10/6/2010

Page 25

1 increased fire insurance rates and/or cancellation.

2 Low-frequency sound and vibrations and shadow

3 flicker impacts on humans, livestock, and wildlife

4 result in stress-related illnesses and disease. In

5 Taiwan, a goat farmer lost most of his flock that

6 starved to death due to stress and lack of sleep.

7 Alpaca farmers elsewhere have had to relocate to save

8 their herds after turbines were built nearby.

9 A woman named Paula Stahl wrote a letter a few  
10 years back --

11 DR. PELL: Paula who?

12 MS. TISDALE: Stahl, S-t-a-h-l.

13 DR. PELL: Thank you.

14 MS. TISDALE: -- wrote a letter a few years  
15 back describing how all the wildlife left the area after  
16 the construction of a 66-megawatt Mountaineer Wind  
17 Energy Center in West Virginia. And that's our future.  
18 We'll lose our wildlife.

19 Ambient noise levels in these quiet and rural  
20 natural areas are lower, especially at night, and sound  
21 carries further in our higher elevation and thinner air.  
22 Noise and vibration impacts can be felt up to several  
23 miles away. ESJ turbines will not only impact resources  
24 in Mexico, they will also impact the protected areas and  
25 wildlife that rely on those protections, areas of the

CLEAVES & ASSOCIATES (619) 238-1415

1 Jacumba Mountain Wilderness and other areas.

2 We recommend that the DOE deny this permit and  
3 that Sempra's SDG&E get busy complying with energy  
4 efficiency requirements that only 37 percent of what  
5 they're required to be at and start building and  
6 supporting more renewable energy projects where the  
7 energy is used instead of destroying some of the most  
8 accessible wild places left in eastern San Diego County  
9 and northern Baja. Thank you.

10 DR. PELL: Thank you, Donna. Appreciate that.  
11 Any documents you can give us to support that statement  
12 will be greatly appreciated.

13 I'm sorry, Patrick. If you're going to ask her  
14 a question, ask it so that the reporter can catch it.

15 MR. BROWN: I want her to send me the link to  
16 the symposium.

17 DR. PELL: Next is Mark Ostrander.

18 MR. MARK OSTRANDER: I'm going to use the  
19 corner of the table here.

20 DR. PELL: Sure.

21 MR. OSTRANDER: Looking through your EIS,  
22 under 3.9.1.3, staffing levels at Jacumba Fire Station,  
23 it's the wrong station, number one, also says it's got  
24 one full-time firefighter and four volunteers. That is  
25 incorrect.

TRANSCRIPT OF PROCEEDINGS 10/6/2010

Page 27

1 I also noticed on your fire --  
2 DR. PELL: Excuse me, Mark. Can you tell us  
3 what is correct?  
4 MR. OSTRANDER: Staffing? You mean what the  
5 staffing level's currently?  
6 DR. PELL: Well, you said it's not correct, so  
7 do you know what the staffing is?  
8 MR. OSTRANDER: Zero.  
9 DR. PELL: Zero?  
10 MR. OSTRANDER: Zero staffing level.  
11 DR. PELL: No full time, no volunteer?  
12 MR. OSTRANDER: (No audible response.)  
13 DR. PELL: In other words, no fire --  
14 UNIDENTIFIED VOICE: You got it right.  
15 MR. OSTRANDER: You might get someone in there  
16 in the event of a special staffing or something if  
17 there's extra bodies from Cal Fire to staff it, but that  
18 depends on what Sacramento decides to do on their  
19 staffing levels. So it's not a given. There is no  
20 staffing there.  
21 Okay. I have a question on Map 3-123 which is  
22 your fire hazard severity zones. What is that map based  
23 on? It does not look like the fire hazard severity map  
24 that's used in the State as a standard, 'cause it's a  
25 lot different than that, and it's rated in different

602-1

CLEAVES & ASSOCIATES (619) 238-1415

**RESPONSE TO 602-1:** The fire hazard severity map used for Figure 3.9-1 is from CAL FIRE, 2007, as noted in the figure sources. DOE reviewed the relevant fire hazard maps and confirmed that the CAL FIRE 2007 fire hazard severity map is the current adopted fire hazard severity zone map. As shown in the 2007 map, the ESJ U.S. Transmission Line project would be constructed primarily in an area that has a fire hazard designated of “very high.” A more recent CAL FIRE map published in May 2008, which is not yet adopted, indicates a recommended designation of “Very High Fire Hazard Severity Zone” for the ESJ U.S. Transmission Line project site. This more recent map, if adopted, would appear to retain the currently adopted fire hazard severity rating for the project site. These fire hazard severity ranking maps are available online at:

[http://www.fire.ca.gov/fire\\_prevention/fire\\_prevention.php](http://www.fire.ca.gov/fire_prevention/fire_prevention.php)

Volume 3  
Comments and Responses

TRANSCRIPT OF PROCEEDINGS 10/6/2010

Page 28

602-1

1 areas and very high and high and the boxes and  
2 everything, but I don't see who produced this map.

3 DR. PELL: Okay.

602-2

4 MR. OSTRANDER: Number of fires: It said the  
5 number of fires were 225 and that was since 1959. My  
6 question is, is how many of those fires were after 2000  
7 when the climate change started happening and the fire  
8 activities picked up? You know, that's a pretty big  
9 statement to say from 1959. Were the fires more  
10 prevalent in 2000 or was this over -- so we need to  
11 maybe narrow that time down, because climate change has  
12 made a difference.

602-3

13 Socioeconomics: I think this is going to fall  
14 under -- but it was also under fire and hazards, fire  
15 insurance costs have already gone up in this area due to  
16 the wildfires that were out here. With the project  
17 going in, it's going to increase it more. We went from  
18 a seven to a nine under the ISO rating. That  
19 significantly increased fire insurance costs to  
20 residents out here. With another project, it's going to  
21 bring more fire hazard. That could bring us to feasibly  
22 a ten which will increase it significantly.

23 My last part of this is there is no mention at  
24 all that that cross-gen connect is going to bring green  
25 energy. They could put anything else on there I take

CLEAVES & ASSOCIATES (619) 238-1415

**RESPONSE TO 602-2:** Section 3.9 is revised to indicate that in San Diego County as a whole, there have been several major wildfires in the past 10 years.

**RESPONSE TO 602-3:** The Insurance Services Office, Inc. (ISO) publishes information regarding its numerical grading system for fire protection, which is one determinant of fire insurance rates. That information indicates that the scores are based on a community's fire suppression capabilities. The presence of potential hazards in the area is not identified as a factor in the ISO score. Additional information is available online at:

<http://www.isomitigation.com/ppc/2000/ppc2007.html>.

TRANSCRIPT OF PROCEEDINGS 10/6/2010

Page 29

1 it. So it's being sold as -- it's going to sell green,  
2 but what happens if they put fuel fire generation on it?  
3 Is it going to be allowed on that cross tie? That's my  
4 question.

5 DR. PELL: Thanks, Mark. Appreciate that.  
6 This issue of what the line would be used for also came  
7 up last night at Jacumba. I should say that we raised  
8 that issue. The Department of Energy raised that issue  
9 with Semptra, and we have in writing a letter from them  
10 that states that they would agree to a permit condition  
11 limiting the line to the use of only renewable energy.  
12 So we have looked into that.

13 MR. SMITH: Does DOE accept that letter as a  
14 condition?

15 DR. PELL: I can't answer that until the actual  
16 Record of Decision and Presidential permit are issued,  
17 Kevin, but we have that on the Web site. It's an  
18 official document, part of the application.

19 MR. SMITH: I'd like to make an official  
20 recommendation that you accept that responsibility.

21 DR. PELL: Would you hold that until you're up  
22 to speak, please, Kevin, because otherwise we're going  
23 to get all confused about who's saying what to --

24 MR. OSTRANDER: For my final comment I'll ask  
25 that same recommendation, that it be recommended that

CLEAVES & ASSOCIATES (619) 238-1415

Volume 3  
Comments and Responses

---

TRANSCRIPT OF PROCEEDINGS 10/6/2010

Page 30

1 only green energy go onto that line for renewables.

2 DR. PELL: Okay. We'll add that to Mark's  
3 comments.

4 George Mireles, do I have that correct?

5 MR. GEORGE MIRELES: Yes. So the only thing  
6 we're talking about is just about the environmental  
7 impact and on -- right, from what you're saying at the  
8 beginning or is this just more of some other things?

9 UNIDENTIFIED VOICES: Say what's in your heart.

10 MR. MIRELES: Well, I have a few concerns  
11 'cause there's been at least three SDG&E people, like  
12 people I've seen walk from their car to -- and I'm  
13 around in stores that they said that -- well, besides  
14 that power took most of the contract for the workers and  
15 everything, how they want to do all the work and how  
16 they're explaining it, my main concern was is that they  
17 were saying that "Oh, we just put this -- we're just  
18 going to put this line up and it's not really because we  
19 want to get the green energy. It's just that we want to  
20 put it up and then hope that the people be contract to  
21 get the green energy passes and everything. So  
22 you're -- it's not that you're guaranteed to have these  
23 green energy sources. It's just that you're hoping that  
24 you might get them."

25 And this is not something where I'm just making

CLEAVES & ASSOCIATES (619) 238-1415

TRANSCRIPT OF PROCEEDINGS 10/6/2010

Page 31

1 it up. This is coming from, you know, SDG&E people  
2 where -- you know, if this is a -- like the guy said, it  
3 was a green source and then why are they saying that it  
4 might not -- there's like a chance that we might not get  
5 it or you guys might not get those sources?

6 DR. PELL: Is that it?

7 MR. MIRELES: Yes.

8 DR. PELL: Thanks, George. I'm not going to  
9 say anything additional to what I just said before --

10 MR. MIRELES: Right.

11 DR. PELL: -- on that particular subject.

12 You don't have any names of the people who said  
13 any of these things, do you?

14 MR. MIRELES: I can probably get two of them  
15 out of three.

16 UNIDENTIFIED VOICE: They'll probably lose  
17 their job.

18 DR. PELL: Dennis Berglund.

19 MR. DENNIS BERGLUND: Well, we are local  
20 residents and speaking for ourself, we own a business  
21 here and we're professional electrical engineers.

22 We're concerned about this project primarily  
23 because when the Sunrise Powerlink was asked to be a  
24 renewable energy transmission line, SDG&E said they  
25 would refuse to build it if they had to commit to

602-4

CLEAVES & ASSOCIATES (619) 238-1415

**RESPONSE TO 602-4:** Refer to the response to comment 305-1 for information on assurances that the transmission line would be used only to transmit electricity generated from renewable sources.

Volume 3  
Comments and Responses

---

TRANSCRIPT OF PROCEEDINGS 10/6/2010

Page 32

1 33 percent renewable energy.

2 We think that you should insist and accept the  
3 letter that says that this will only be used for  
4 renewable energy, for several reasons. First of all,  
5 SDG&E has one and participates with another gas-powered  
6 power plant just across the border, within view of the  
7 border in Mexicali. As you probably know, they have a  
8 huge investment in an Ensenada LNG plant where they  
9 bring foreign gas into the country.

10 DR. PELL: Excuse me, Jane. Do you know that  
11 word, Ensenada?

12 MR. BERGLUND: Liquefied, Ensenada, and  
13 liquefied natural gas. We know that there's a lot of  
14 natural gas, of course, in America. Well, Sempra has  
15 chosen to buy it in Indonesia and Russia and bring it  
16 over here. They have a 24-inch, I believe,  
17 high-pressured gas line running to Mexicali which is  
18 capable of firing more power plants, and I envision that  
19 this plant, because of their past actions, or this line  
20 would eventually be used for other than renewable energy  
21 unless there's a solid reason and a commitment in that  
22 regard.

23 Otherwise, it's rather amusing that we will  
24 build a freeway for energy across the border, but we  
25 have a real hard time having workers come across. So in

CLEAVES & ASSOCIATES (619) 238-1415

TRANSCRIPT OF PROCEEDINGS 10/6/2010

Page 33

1 other words, we'll use Mexico for our best interest but  
2 not their cultural.

3 The last item that I'd like to mention, because  
4 these are actual instances that have occurred in the  
5 past, is there needs to be a bond for removal of this  
6 equipment when it's unused. You're probably aware that  
7 there's projects all over the United States and in  
8 particular in California in the Palm Springs area and  
9 the Tehachapi area and the Tracy area, that there are  
10 derelict wind farms that are just sitting there.

11 Now, I have been told on some of these issues  
12 that "Oh, this is going to be a commitment," but unless  
13 there's a solid bond for removable, these things will  
14 sit there. And as you know, as the technology goes  
15 along, new technologies replace old technologies, and I  
16 can tell you that with these wind generators technology  
17 has moved along considerably just in the last few years.

18 As an example, they're using variable frequency  
19 drives now which means the whole drive mechanism is  
20 different. They probably wouldn't upgrade those.  
21 Secondly, they're moving all the material, all the  
22 mechanism, to the bottom so all the ones that have the  
23 mechanism up at the top will probably be unused. Unless  
24 there's a commitment to do something about that, what  
25 we'll end up with in 50 years is a bunch of derelict

CLEAVES & ASSOCIATES (619) 238-1415

**RESPONSE TO 602-5:** A performance bond of this nature would be best addressed by local agencies that have the authority to monitor for compliance and provide enforcement. DOE will consider this as a potential mitigation in the Presidential permit.

Page 34

1 devices sitting there which will become an eyesore and  
2 of no practical value.

3 Now, as regards to fire and fire insurance, I  
4 will tell you as a resident out here, our insurance is  
5 \$4,000 a year for fire. Now, I don't know if any of you  
6 people living in the city pay that kind of fire  
7 insurance. Not only is our insurance \$4,000, but it  
8 goes up 4- to \$600 a year. This will --

9 DR. PELL: Excuse me. Are you talking about  
10 \$4,000 a year for an average household?

11 MR. BERGLUND: Yes, we have an average  
12 household. This particular residence is on eight acres  
13 and we just negotiated it. In fact, we had one  
14 insurance company that said, "You know, we really don't  
15 want to do this anymore, but if you'll jump over all  
16 these hurdles we'll let you." Well, we went to another  
17 one, which was all right, but every year I've got to  
18 tell you it goes up 4- to \$600.

19 DR. PELL: Does the State have a program of  
20 providing insurance of a private carrier-owned provider?

21 MR. BERGLUND: To my knowledge, no, not --

22 MS. BILLIE JO JANSEN: They do but it's not  
23 cheap.

24 MR. BERGLUND: And I don't believe it fits  
25 fire, does it?

CLEAVES & ASSOCIATES (619) 238-1415

TRANSCRIPT OF PROCEEDINGS 10/6/2010

Page 35

1 UNIDENTIFIED VOICE: Yes, it's for fire. It's  
2 just for fire.

3 MR. BERGLUND: Several years ago --

4 MS. JANSEN: It's only if no one else will take  
5 you.

6 MR. BERGLUND: Several years ago our fire  
7 insurance went up about 15- to \$1,800 in one year and we  
8 said, "This is kind of unreasonable."

9 You know the answer we got back? "Well, you  
10 were just paying too little before." But we are in the  
11 highest rated fire area. And as Mark said, we can only  
12 see this go up. So it makes it very, very expensive to  
13 live up here in the country. Thank you.

14 DR. PELL: Thank you Dennis.

15 MR. BROWN: Dennis, I have a question for you.  
16 When you mentioned the bonding requirement, were you  
17 inferring the wind turbines in Mexico or the bonding for  
18 the removal of the five lattice towers and the lines?  
19 Because in this case here, that's the only thing that  
20 could be bonded. Is that what you're interested in or  
21 are you just talking in general?

22 MR. BERGLUND: Well, I'm talking primarily the  
23 wind, the tower. You know, the engineering on  
24 transmission lines is pretty antiquated. You know, I  
25 mean in the future of transmission lines is they're

CLEAVES & ASSOCIATES (619) 238-1415

Volume 3  
Comments and Responses

---

TRANSCRIPT OF PROCEEDINGS 10/6/2010

Page 36

1 really going to be nonexistent. You know, our future is  
2 just not going to be practical this way, and they're  
3 finding that out with smart grid technology. What  
4 they're really finding is you really shouldn't send this  
5 stuff too far. So I'm not as worried about that. I'm  
6 primarily worried about all the structures which have  
7 that ability or the necessity to mature technologically  
8 because the stuff will just be sitting there not used.

9 DR. PELL: You know we have no jurisdiction  
10 over Baja California.

11 MR. BERGLUND: Well, if you don't have any  
12 influence, you shouldn't be doing this line at all.

13 UNIDENTIFIED VOICE: Right, exactly.

14 UNIDENTIFIED VOICE: Yeah.

15 DR. PELL: Okay.

16 MR. BERGLUND: You're telling me you're going  
17 to build a string, but I have no control of what the guy  
18 is going to do on the other end of the string.

19 DR. PELL: I'm not telling you that I'm going  
20 to build --

21 MR. BERGLUND: Well, as a scientist and a  
22 doctor, you know, and I don't know what your doctorate  
23 is in, but you wouldn't accept that premise.

24 DR. PELL: Dennis, I appreciate your comments.  
25 Thank you very much.

CLEAVES & ASSOCIATES (619) 238-1415

TRANSCRIPT OF PROCEEDINGS 10/6/2010

Page 37

1 MR. BERGLUND: Very good.

2 MR. SMITH: Dennis, may I ask a question?

3 Would your insurance go down at all if they put the  
4 lines underground?

5 MR. BERGLUND: I don't know that. I don't know  
6 that. You know, insurance companies are an interesting  
7 group. They need to make money and they're going to  
8 take the fringe groups and they're going to charge the  
9 more money, so there's always that process. You know, I  
10 tell people it costs more money to live in the country  
11 and they say, "Well, how can that be? All the poor  
12 people live in the country."

13 I say, "Give it a try."

14 MS. BILLIE JO JANSEN: Why do you think they're  
15 poor?

16 MR. SMITH: Because they said they were going  
17 to turn the power off when they thought there was a fire  
18 and maybe that would cause your insurance to go up?  
19 Maybe if they under-ground the lines it wouldn't go up.

20 DR. PELL: Gentlemen, can we return to the  
21 hearing, please.

22 MR. SMITH: Certainly.

23 DR. PELL: Kevin, you're next. Kevin Smith I  
24 believe.

25 MR. SMITH: When you started the conversation,

CLEAVES & ASSOCIATES (619) 238-1415

1 last night you had mentioned that there was only  
2 one mile that is in this EIR up to the substation that  
3 was just up by the border, and today you said it goes  
4 all the way to ECO.

5 Now, is the ECO to Domingo Lake or is ECO just  
6 above the border?

7 DR. PELL: Excuse me. The .65 miles refers to  
8 the length of the line from the U.S.-Baja border to ECO  
9 Sub, and the one mile I was talking about is the  
10 distance south of the border to the substation on the  
11 Mexican side.

12 MR. SMITH: I was actually talking about, does  
13 ECO run underneath the South Powerlink and over where  
14 Domingo Lake is? Is that where the ECO is planned  
15 currently?

16 MR. BROWN: The ECO Substation is as indicated  
17 here, but there's a 138-kV transmission line that would  
18 run over to Old Highway 80 and then from there shoot  
19 north towards Boulevard. So it's an additional power  
20 line that's not there now, would run within the existing  
21 500-kV right of way with the Southwest Powerlink, and  
22 then when it got right to about Old Highway 80 closer  
23 towards Boulevard -- I don't have a map to show you. It  
24 shoots due north or in that area.

25 MR. SMITH: But they call that one the ECO

TRANSCRIPT OF PROCEEDINGS 10/6/2010

Page 39

1 Substation?

2 MR. BROWN: That's part of the ECO Substation  
3 project, but it's a 138-kV power line. The actual  
4 substation itself is here as indicated in this map.

5 MR. SMITH: Okay.

6 MR. BROWN: Yeah. It's a component of that  
7 project.

8 MR. SMITH: So where is the power supposed to  
9 go to?

10 DR. PELL: I don't understand the question,  
11 Kevin. From where?

12 MR. SMITH: Well, we've got a lot whole of  
13 power we just put in a substation.

14 What are we going to do with it?

15 DR. PELL: It goes into the grid.

16 MR. SMITH: What grid? There's no grid there.

17 DR. PELL: You'd have to talk to the applicant  
18 about that.

19 MR. SMITH: I'm asking a serious question. You  
20 can't say what grid. Come on.

21 MR. BROWN: It loops in right there.

22 DR. PELL: The present expectation is that the  
23 ECO Sub would connect to the proposed Sunrise Powerlink.

24 MR. SMITH: No, no, no. It's not supposed to  
25 go to Sunrise Powerlink.

CLEAVES & ASSOCIATES (619) 238-1415

Volume 3  
Comments and Responses

---

TRANSCRIPT OF PROCEEDINGS 10/6/2010

Page 40

1 UNIDENTIFIED VOICE: That's not correct.

2 MR. BROWN: To the existing Southwest  
3 Powerlink.

4 MR. SMITH: It's only going to go to the south  
5 link and there's no power on south link to get anywhere.

6 That's why I want to ask the question: What  
7 are you going to do with it?

8 DR. PELL: Well, to my understanding, and I'll  
9 ask Alberto Abreu from the company to amplify on it if  
10 he would like, is that the current situation on the  
11 Southwest Powerlink is it can accommodate up to 80  
12 additional megawatts of energy. Beyond that, the burden  
13 would fall on the CPUC to provide a conveyance for the  
14 power to the grid.

15 Alberto, do you want to add anything to that?

16 MR. ALBERTO ABREU: Yes. The ESJ project is  
17 going to connect into the ECO Sub which is going to loop  
18 into the Southwest Powerlink. The Southwest Powerlink  
19 doesn't have a physical limitation as to how much energy  
20 can get on it. What it has is, the Cal ISO has a  
21 special protection scheme that they apply throughout  
22 their area, the Cal ISO control area, which limits how  
23 much power can be tripped off line if a line goes out.

24 So in other words, if Southwest Powerlink were  
25 to go out, or any other line for that matter, they limit

CLEAVES & ASSOCIATES (619) 238-1415

TRANSCRIPT OF PROCEEDINGS 10/6/2010

Page 41

1 the amount of generation that can be hooked up to that  
2 line to a certain number so that if they have to trip  
3 the line not too much energy gets lost. Right now that  
4 limit is being approached, and there's 80 megawatts of  
5 freeboard there between what that limit is and what's  
6 actually connected to Southwest Powerlink. But that  
7 limitation is purely a special protection scheme  
8 limitation. It's not a physical limitation on Southwest  
9 Powerlink.

10 What Sunrise or some other improvement like it  
11 would do is it would allow the removal basically of that  
12 limitation, because power can then flow in a different  
13 direction, a different path. Then if Southwest  
14 Powerlink goes down, the power that's being injected  
15 into Southwest could then flow in a different path.

16 So the power would come in from our project,  
17 would go into Southwest Powerlink, and, like I said,  
18 there's no physical limitation on Southwest Powerlink.  
19 Well, there is but we're not near that.

20 MR. SMITH: Well, they're 80 megawatts away  
21 from it.

22 MR. ABREU: You're 80 megawatts away from a  
23 special protection scheme threshold but --

24 MR. SMITH: That special protection scheme  
25 threshold is exactly what the limit is. You cannot put

CLEAVES & ASSOCIATES (619) 238-1415

Volume 3  
Comments and Responses

---

TRANSCRIPT OF PROCEEDINGS 10/6/2010

Page 12

1 more on there than that. The only reason that you can  
2 put more on it than that is just in the absence of a  
3 shutdown and no other time.

4 MR. ABREU: No, no, that's not correct. We can  
5 put all the 100 or whatever megawatts --

6 MR. SMITH: 1,000 megawatts?

7 MR. ABREU: We can put all the megawatts into  
8 that line. What happens then is that existing  
9 generation and future generation would then be curtailed  
10 under certain conditions of overload conditions on that  
11 line. So if you're putting that much power in, these  
12 other generators would be curtailed, but you can put all  
13 that power in there.

14 MR. SMITH: Well, that's very true as long as  
15 you can kick everybody else off.

16 MR. ABREU: Well, we won't do it.

17 DR. PELL: Let's not turn this into an  
18 argument.

19 MR. SMITH: I'm asking a question.

20 MR. ABREU: Cal ISO is the one that controls  
21 the grid and they're the ones that control who is on and  
22 not on.

23 MR. SMITH: But weren't they there first?

24 MR. ABREU: They were there first, but there  
25 are certain -- Cal ISO, the way it kicks people out of

CLEAVES & ASSOCIATES (619) 238-1415

TRANSCRIPT OF PROCEEDINGS 10/6/2010

Page 13

1 injecting power, it's an economic-based threshold. So  
2 the lowest incremental cost generators get kicked off  
3 last.

4 MR. SMITH: Oh.

5 MS. JANSEN: So does that mean that the people  
6 participating in distributed generation from the local  
7 communities will be the first off or the last?

8 MR. ABREU: I don't know the answer to that  
9 question.

10 MR. SMITH: They would have to be last.

11 MR. ABREU: I don't know the answer to that  
12 question.

13 DR. PELL: Okay. Let's get back to the  
14 hearing, please.

15 MS. JANSEN: Well, that needs to be answered.

16 MR. SMITH: I'll ask her question again if you  
17 don't mind. Does that mean the distributed generation  
18 that would occur in any community or this community  
19 would go off first or last?

20 DR. PELL: That's probably a question for  
21 Cal ISO.

22 MR. ABREU: I think we may have an answer for  
23 that.

24 DR. PELL: All right.

25 MR. SCOTT CRIDER: For the record,

CLEAVES & ASSOCIATES (619) 238-1415

Volume 3  
Comments and Responses

---

TRANSCRIPT OF PROCEEDINGS 10/6/2010

Page 44

1 Scott Crider, C-r-i-d-e-r, Sempra Generation. Any  
2 distributed generation resources would be accessing the  
3 transmission grid, the Southwest Powerlink anyway, so it  
4 would have zero impact.

5 MR. SMITH: Very good.

6 DR. PELL: Typically they're much lower  
7 voltage.

8 MS. TISDALE: I do have a question on the  
9 connection and priority, because SDG&E has a power-first  
10 agreement with the Imperial Valley Solar that was just  
11 approved and that's 300 megawatts, and Tule Wind also  
12 has an agreement with SDG&E to use the Southwest  
13 Powerlink through this substation, so who would have  
14 priority, whoever gets built first?

15 MR. ABREU: Well, renewables are first in line.  
16 They would not get kicked out, so you would first kick  
17 off all the, basically, fossil-fired generators.

18 MS. TISDALE: Well, Tule Wind told us that  
19 SDG&E had informed them that they would be kicked off  
20 the grid, you know, whenever.

21 MR. ABREU: I wasn't privy to that  
22 conversation, so I can't really comment on that; but the  
23 way the system works is the low-cost incremental  
24 generators get first access. So renewables, because  
25 they have no incremental cost of generation, get on the

CLEAVES & ASSOCIATES (619) 238-1415

TRANSCRIPT OF PROCEEDINGS 10/6/2010

Page 45

1 line first.

2 MS. TISDALE: Well, I know that SDG&E has  
3 agreed to pay above-market record price for Stirling or  
4 Imperial Valley Solar and I know that wind energy is  
5 very expensive, so it -- I really don't --

6 MR. ABREU: It's not the cost of the  
7 generation, Donna. It's the cost of the -- basically  
8 the fuel cost and it's zero for renewables.

9 DR. PELL: Okay. We're getting well beyond the  
10 scope of the EIS at this point.

11 Kevin, did you have anything further you wanted  
12 to add?

13 MR. SMITH: No. That's good. Thank you.

14 DR. PELL: Thank you.

15 MS. TISDALE: It would be nice to get these  
16 answers on the public record, though. Everybody has a  
17 lot of questions.

18 MR. SMITH: Oh, I did have one other question  
19 I'd like to ask.

20 Is there going to be anybody doing inspections  
21 of any of the digging sites for archeological things? I  
22 know that the train is actually an archeological site.  
23 It's actually old enough now that it is considered  
24 historic. And there's been quite a bit of culture up  
25 here. It's normal and typical that somebody's always

602-6

CLEAVES & ASSOCIATES (619) 238-1415

**RESPONSE TO 602-6:** Refer to Section 3.5.2 for information on the procedures the applicant would follow if unanticipated archaeological finds are encountered during project construction.

602-6

1 present when any digging occurs in an undisturbed soil  
2 and even in disturbed soil most oftentimes. So I would  
3 think it would be typical and normal that you would have  
4 somebody here to pick up all the archeological things  
5 and stop anything if they do find anything. I'd like to  
6 make sure that that occurs.

7 DR. PELL: Okay. Thank you, Kevin. Fair  
8 point.

9 "Billiedo," I'm not sure. B-i-l-l-i-e-d-o; is  
10 that correct?

11 UNIDENTIFIED VOICE: Billie Jo.

12 MS. JANSEN: It's Billie Jo actually, Billie Jo  
13 Jansen, in Campo.

602-7

14 I look at this with a certain level of  
15 amazement, because we're allegedly developing a policy  
16 in this country of being independent in our energy  
17 generation, and yet I look at this and say, "Well, okay.  
18 We're giving taxpayer goodies to a large and  
19 monopolistic entity to go into another country and  
20 exploit their resources and bring it back here." And  
21 I'm looking at that and going, "How is that different  
22 from our relationship with the Middle East?"

23 And I might point out as well when you're  
24 thinking about a Presidential permit for such a thing,  
25 don't you need to think about the President's policy, as

**RESPONSE TO 602-7:** Potential socioeconomic impacts associated with short-term jobs from the ESJ U.S. Transmission Line project are addressed in EIS Section 3.13. Comments pertaining to the merits of the project with respect to labor policy, federal energy policy, and California utility regulations are outside the scope of the NEPA process. DOE will consider these comments as well as all other comments received in that proceeding before making a final determination on the permit application.

TRANSCRIPT OF PROCEEDINGS 10/6/2010

Page 47

1 well? And don't you need to think about how we're going  
2 to defend that resource if it comes to that?

3 We're doing that in the Middle East now.  
4 Mexico is less stable than most OPEC countries, and  
5 there's no end in sight for that. It's getting worse  
6 every year. I think this needs to be considered  
7 carefully.

8 I'm also going to sharply disagree with you on  
9 the inclusion of economic information. Social justice  
10 always has an economic component. In fact, it's the  
11 biggest part of social justice, is the economic  
12 component.

602-7

13 We have impacts to the taxpayers who are  
14 helping to fund this, albeit indirectly. We have  
15 impacts to ratepayers. We have impacts to defenseless  
16 rural communities who are just being trampled and if  
17 that isn't social injustice, I don't know what is. We  
18 are paying more for our fire insurance so that other  
19 people can go get stuff from Mexico and bring it and  
20 sell it here. We're going to pay more for our  
21 electricity rates.

22 There's a strong economic component. And I'm  
23 not talking about the company's bottom line. I'm  
24 talking about our bottom line. These things need to be  
25 part of this assessment.

CLEAVES & ASSOCIATES (619) 238-1415

Volume 3  
Comments and Responses

TRANSCRIPT OF PROCEEDINGS 10/6/2010

Page 10

1 DR. PELL: Billie Co, first of all, this is  
2 not --

3 MS. JANSEN: I'm not here to debate. I'm here  
4 to tell you what I think and that's what I think and I'm  
5 also going to put it in writing.

6 DR. PELL: That's great and I look forward to  
7 receiving that, but it's worth mentioning this is not a  
8 government project. This is a private sector --

9 MS. JANSEN: No, but we are helping to fund it.  
10 We are offering taxpayer goodies to these people.

11 DR. PELL: This is a private sector enterprise.  
12 There is no taxpayer money involved in the project.  
13 There is no vested interest.

14 MS. JANSEN: Okay. There's no taxpayer --

15 DR. PELL: May I finish, please?

16 MS. JANSEN: -- benefit, taxpayer: beneficial  
17 grants, right.

18 DR. PELL: There is no taxpayer involvement in  
19 this project. There is no vested interest in this  
20 project by the government. We have no function other  
21 than to consider whether or not the permit is  
22 appropriate.

23 MS. JANSEN: Who is making up for the tax  
24 benefits that they get from doing renewable energy?

25 DR. PELL: I have no answer to that. That is

CLEAVES & ASSOCIATES (619) 238-1415

TRANSCRIPT OF PROCEEDINGS 10/6/2010

Page 49

1 completely beyond --

2 MS. JANSEN: That's because it's us.

3 DR. PELL: It's completely beyond what we're  
4 doing.

5 MS. JANSEN: No, it's not. It's part of this  
6 and it needs to be part of this. That's what I'm  
7 telling you.

8 DR. PELL: That's a proper question for the  
9 State and local authorities like the CPUC, like the  
10 County, like your local rating bodies --

11 MS. JANSEN: And you also --

12 DR. PELL: -- not for the Federal Government.

13 MS. JANSEN: -- should be looking out for us  
14 because we're ratepayers in this County.

15 DR. PELL: But the project is what we call a  
16 merchant project proposed by a private sector  
17 enterprise. It's what we call a third-party project.  
18 We have no vested interest in the outcome of the  
19 project. They are paying for the analysis. They are  
20 paying for these meetings. They are paying for the  
21 conduct of the environmental review. And the only  
22 taxpayer money that's involved at all perhaps is you  
23 could argue that my salary is taxpayer money, but that's  
24 the full extent of it.

25 MS. JANSEN: They also have tax benefits.

15 MS. JANSEN: And there needs to be a comparison  
16 of how well we do if this is not built and how well we  
17 do if it is.

Page 31

1 a look at it.

2 MS. JANSEN: I hope you'll take a look at it  
3 based on my verbal comments which I presume were  
4 appropriately taken down. Thank you.

5 DR. PELL: You can do that as well, but if you  
6 would like to augment it, we would certainly welcome  
7 that.

8 Kevin, you wanted to add something?

9 MR. SMITH: Yeah. Going back to your comment  
10 that you want to make sure that everybody understands  
11 how this is, I don't understand where the power goes. I  
12 still don't understand where the power goes. And unless  
13 you understand where the power goes, you haven't  
14 finished your EIR. You can't just say it stops right  
15 there.

16 DR. PELL: I didn't say it stops anywhere. I'm  
17 telling you that it's of no relevance to me as to where  
18 it goes.

19 MR. SMITH: Then you're saying you don't care  
20 about the EIR.

21 DR. PELL: It's not an environmental impact.  
22 Once it enters the grid --

23 MR. SMITH: It isn't in the grid yet. It  
24 hasn't made it to the --

25 DR. PELL: Okay. The physical mechanism of

CLEAVES & ASSOCIATES (619) 238-1415

TRANSCRIPT OF PROCEEDINGS 10/6/2010

Page 52

1 getting to the grid is what we're looking at. The power  
2 itself --

3 MR. SMITH: It didn't get to the grid.

4 DR. PELL: The power itself is beyond our  
5 jurisdiction. That's an appropriate question for the  
6 people that control rate making and power movement  
7 within the State, like the CPUC, like Cal ISO --

8 MR. SMITH: I'm going to repeat myself.

9 DR. PELL: -- not for DOE.

10 MR. SMITH: I know you can talk fast, but I can  
11 talk just as fast. It didn't make it to the grid. It's  
12 not there. It stopped in the middle of a lawn. It  
13 didn't go to the grid. I'll say it again: It didn't go  
14 to the grid.

15 DR. PELL: Okay.

16 MR. SMITH: Look at the paper work. It doesn't  
17 make it there. There's no connection in the wires. You  
18 don't have it all the way there. Show me where it gets  
19 to make the connection.

20 DR. PELL: You're asking me about the proposed  
21 intent of the ECO Substation.

22 MR. SMITH: Yes, that one right there.

23 DR. PELL: And Patrick did --

24 MR. SMITH: There is no power line there. You  
25 don't have a connection.

CLEAVES & ASSOCIATES (619) 238-1415

TRANSCRIPT OF PROCEEDINGS 10/6/2010

Page 53

1 DR. PELL: If you'll look at the diagram,  
2 you'll see that there is a loop to Southwest Powerlink.

3 MR. SMITH: Yeah.

4 DR. PELL: Well, that's the connection.

5 MR. SMITH: Okay. Then why do you buy the  
6 whole other loop for the other continuation at ECO  
7 Substation? It doesn't have any capacity. No one has  
8 ever gotten on a line without capacity. That is an EIR.

9 Do you just let anybody do anything because  
10 they say they want to do it?

11 DR. PELL: Kevin, we've just gone over that  
12 ground and the company did just answer you. Alberto did  
13 explain it.

14 MR. SMITH: We didn't go over it at all. We  
15 avoided it. We talked about how 60 megawatts is enough  
16 to take 1,200. It's insanity.

17 DR. PELL: Moving right along -- thank you,  
18 Kevin.

19 MR. SMITH: Thank you.

20 DR. PELL: -- Lorrie Ostrander? Oh, I'm  
21 finished. No.

22 MR. BROWN: No, that's Ms. Ostrander.

23 DR. PELL: I'm sorry, Lorrie Ostrander, right.  
24 Hello again.

25 MS. LORRIE OSTRANDER: Good evening, sir.

CLEAVES & ASSOCIATES (619) 238-1415

TRANSCRIPT OF PROCEEDINGS 10/6/2010

Page 54

1 Thanks for being here. And I have a couple of issues.  
2 Of course, others have brought them up, but when we talk  
3 about insurance, first of all, let it be known I am not  
4 intelligent with all these abbreviations and  
5 dah-dah-dah-dah-dah. Okay?

6 But anyway, I have concerns as far as what I  
7 just received, information talking with my insurance  
8 agent today. Our insurance went up \$300 in one year. I  
9 was shocked knowing that other things were going to go  
10 up as well. And in order to bring it down at an  
11 affordable yearly price, we had to up our deductible,  
12 and that kind of hurts because he plans to retire this  
13 year, but we'll do. We scraped before; we'll scrape  
14 again.

15 We are trying to go as green as possible on our  
16 own home and going through difficulties with certain  
17 areas, but yet we're allowing others to put these  
18 humongous fire hazard material all around us that does  
19 medical damage to people. You can talk to people in our  
20 community who are going through medical problems ever  
21 since they went up. Okay.

22 Past meetings Sempra made a notation that our  
23 property and in that area on the west of Jacumba town  
24 was not going to be affected with anything. Last night  
25 I brought up an issue that was a fib. For whatever

CLEAVES & ASSOCIATES (619) 238-1415

Comments and Responses

---

TRANSCRIPT OF PROCEEDINGS 10/6/2010

Page 55

1 reason, they could not do their ground control on the  
2 other side east of Jacumba, on the other side of the  
3 mountain. They brought it to our location, like 1/16 of  
4 a mile away from our well, hard-core drilling for over a  
5 month.

6 They left two big holes right there. They said  
7 they were going to remove everything, which they did,  
8 and now in these huge boulders on this property there's  
9 holes. Who's going to fall in them? I'll tell you  
10 who's going to fall in them and who's going to get sued.  
11 I'll tell you who's going to get sued. International  
12 travelers are going to fall in them and we're going to  
13 get sued like we have in the past.

14 MS. JANSEN: Taxpayer costs.

15 MS. OSTRANDER: Yes, taxpayers' costs. Okay.  
16 The reason why our insurance went up --

17 DR. PELL: You're talking about fire insurance,  
18 Lorrie?

19 MS. OSTRANDER: Yes, yes, sir. Because of the  
20 Harris Fire which was two years ago, who started that  
21 fire? International travelers. The Cowboy Fire,  
22 international travelers. In Mexico -- right at the end  
23 of our property line is the border fence -- there isn't  
24 a day that does not go by we witness fires being  
25 started. As a matter of fact, sir, two of them this

CLEAVES & ASSOCIATES (619) 238-1415

TRANSCRIPT OF PROCEEDINGS 10/6/2010

Page 56

1 past summer were right on the hillside where the towers  
2 are, the turbines.

3           What are you going to do to protect this  
4 country from a country who cannot? Our firefighters  
5 just recently on the Tecate Fire, to put out that fire  
6 and protect the homes in Tecate, because their  
7 firefighters couldn't do it, our firefighters went,  
8 risking their lives and, once again, that's exactly what  
9 we're doing. We're putting them on a fire line because  
10 there's a country who doesn't care. They don't care  
11 about their water supply for their people. They don't  
12 care about their air ordinance, because if they did,  
13 they would have better fuel instead of bringing it here  
14 and it smells like rotten eggs.

15           And now we're letting the turbines come in.  
16 There's an area where the turbines were destroyed in  
17 last year's lightning storm -- we all well know about  
18 it; it was all in the paper -- it is now a grave site  
19 for those blades and the poles.

20           MS. JANSEN: You mean they haven't cleaned them  
21 up?

22           MS. OSTRANDER: They have not cleaned them up  
23 and you can still see them from Highway 5.

24           MR. BROWN: She's talking about the  
25 reservation.

TRANSCRIPT OF PROCEEDINGS 10/6/2010

Page 57

1 MS. OSTRANDER: Yes. I was going to say it's  
2 Federal, you know, bring it up with the Federal  
3 Government and all that. But this is what I'm saying.  
4 There's talk on the other side that the work that  
5 they've done on that side, there's stuff that's yet to  
6 be cleaned. Is this what we want in our backcountry?  
7 No, thank you. We love the night airs, the stars.  
8 That's why we all live out here.

9 But once again you guys just want to take away  
10 life as we see it, the trees, the boulders. I got a  
11 kick out of it when SDG&E and others said they were  
12 going to replace the boulders. Excuse me. You can't  
13 move those boulders and then expect to move them back.  
14 The roads that have got to go in, by the time -- I'm  
15 real quick.

16 DR. PELL: No, it's all right.

17 MS. OSTRANDER: By the time the SDG&E sends  
18 somebody out to clear the poles on our property, it's  
19 late in day. It's late October. And guess what? I've  
20 already done it because I want to fire protect my  
21 property. We do everything we can not only to protect  
22 us but the one neighbor we have next to us.

23 So I just hope that you folks can, as far as  
24 permitting, help the homeowners first that are trying to  
25 go green. We're having a hard time. I don't see a use

CLEAVES & ASSOCIATES (619) 238-1415

TRANSCRIPT OF PROCEEDINGS 10/6/2010

Page 58

1 for these big turbines.

2 UNIDENTIFIED VOICE: Hear, hear.

3 DR. PELL: Lorrie, did you have a chance to  
4 read the fire hazard analysis in the EIS?

5 MS. OSTRANDER: I probably wouldn't get past  
6 the second sentence, sir, to be very honest with you.

7 DR. PELL: Do me a favor. Between now and  
8 November the 1st, give it a shot, try to read it, and if  
9 you think that we're missing stuff, let me know.

10 MS. OSTRANDER: Well, sir, I can almost  
11 guarantee you, being a firefighter's wife for 38 fire  
12 seasons and standing by that individual as well as all  
13 department's side, when I know that there's a fire and  
14 there are power lines and these new wind turbines going  
15 up and knowing that our pilots are jeopardizing trying  
16 to avoid and half the times on a very, very foggy night,  
17 which we do get up here on the mountains, you cannot see  
18 the lights. And when I know that those firefighters are  
19 fighting in a bad storm, wind and just all these  
20 conditions, and our pilots are up there trying to avoid,  
21 all we're doing is making a worse disaster for them.  
22 They cannot fight a fire a thousand feet on both sides.  
23 So what does that do? That puts us in a danger.

24 I live a half a mile away from power towers  
25 already. The turbines, I can see them from my property

CLEAVES & ASSOCIATES (619) 238-1415

Comments and Responses

---

TRANSCRIPT OF PROCEEDINGS 10/6/2010

Page 59

1 and knowing that that vision right there is what I used  
2 to be able to look at at night is really sad 'cause it's  
3 gone, and I don't want to see any more of that being  
4 taken away. Come out of the city once in a while and  
5 see the stars. People who came from the city and saw it  
6 and then they see all these wind turbines and  
7 everything, sure, they took pictures and they said,  
8 "Man, they make a lot of noise."

9 And I go, "Try and live there."

10 DR. PELL: Thank you.

11 MS. OSTRANDER: Thank you, sir.

12 DR. PELL: That's everybody that I had in  
13 writing that completed a form and said they wanted to  
14 speak, so now it's open mic. Anybody who wants to talk,  
15 we still have a half an hour to go. So if you would  
16 like to say something, please do.

17 Gentleman in the back?

18 MR. LARRY JOHNSON: I had a --

19 DR. PELL: Sorry. Would you please tell us  
20 your name.

21 MR. JOHNSON: Larry Johnson for REAL. I turned

25 DR. PELL: Did you mark on it that you wanted

CLEAVES & ASSOCIATES (619) 238-1415

TRANSCRIPT OF PROCEEDINGS 10/6/2010

Page 60

1 to talk? Because I didn't get it.

2 MR. JOHNSON: I checked towards the bottom of  
3 it.

4 DR. PELL: Okay.

5 MR. JOHNSON: Do you have it or somebody have  
6 it?

7 UNIDENTIFIED VOICE: I have it, but the speaker  
8 box isn't checked.

9 MR. JOHNSON: Okay. That's fine.

10 DR. PELL: No, no, no.

11 MR. JOHNSON: Sorry. I'm Larry Johnson from  
12 Campo and I'm a representative for REAL, Rural Economic  
13 Action League, which is a group throughout the whole  
14 Mountain Empire, and I would sort of like to come at  
15 this from a slightly different angle and sort of back  
16 into it, because I know you don't want us to say that we  
17 don't want it.

18 DR. PELL: You can say it. No problem.

19 MR. JOHNSON: But that's sort of what it is,  
20 but approaching it from the standpoint of the  
21 alternatives that you looked at, one was no project  
22 which I think you can come at from the angle of saying  
23 why is this being proposed and what would be the  
24 benefit? And if Mexico has a project down there that  
25 would be for renewable energy -- and I really like

602-8

CLEAVES & ASSOCIATES (619) 238-1415

**RESPONSE TO 602-8:** Section 2.8.1, which was added to the EIS in response to comments, addresses the potential of a direct interconnection to Mexican transmission lines using the WECC transmission corridor and explains that this alternative was considered but dismissed from detailed analysis. Refer to Section 2.8.1 and the response to comment 101-8 for more information.

**Volume 3**  
**Comments and Responses**

---

TRANSCRIPT OF PROCEEDINGS 10/6/2010

Page 61

1 renewable energy; I think it's a good thing -- it sort  
2 of comes about from the vision of how do you do all  
3 this? How do you have renewable energy, wind energy,  
4 and where is it generated and where is it used and how  
5 do you get from here to there?

6           So all of these things are tied together, the  
7 existing Sunrise Powerlink or the Southwest Powerlink,  
8 the new proposed Sunrise Powerlink, and you look at all  
9 these and they're like pipelines and you're trying to  
10 fill them up and you're trying to send it from where  
11 it's generated to San Diego or L.A. or wherever else it  
12 goes.

13           And if you look at the one in Mexico, if  
14 they're going to generate it, and they have the rights  
15 to do that if they want to, but why not let them also  
16 put in their distribution system to take it all the way  
17 to the coast, then maybe up the coast, and then into  
18 San Diego which would off-load that capacity or that  
19 need for that capacity here on the power lines here?

20           That would make it more feasible, then, to use  
21 more of the Southwest Powerlink for other things that  
22 are going to happen or may happen that we maybe can't  
23 stop some of those that will come in, so they would have  
24 a different feed, get up and take it by their own means  
25 to where they need to go, and so that would off-load

602-8

CLEAVES & ASSOCIATES (619) 238-1415

TRANSCRIPT OF PROCEEDINGS 10/6/2010

Page 62

1 some of it.

2 It would also mean that there would be less  
3 disturbance here. If you combine that with the new  
4 trends and so forth that they're talking about of  
5 economizing, of using less power, of green design, and  
6 you can see that there's trends already all over the  
7 nation now where power consumption is going down,  
8 buildings are getting better, the need for local  
9 generation and the area where it's used and local  
10 distribution and improving the grid network and the  
11 smart grid in those systems, all of those fit together  
12 and that's sort of a vision that was sort of skipped.

13 It was taking the old vision of "We're going to  
14 do it the way we always did it and we're going to build  
15 these power lines," and, sure, you can do it. You can  
16 build them. You can put them up and you can run the  
17 wires and you can do the generation, but there ought to  
18 be another way to look at it.

19 And one way to sort of force the hand of that  
20 would be to choose option number one which is no  
21 project, and that forces them to say is that  
22 economically viable in Mexico? If it is, then let them  
23 run their power, bring it up, and cross it somewhere  
24 else closer to where it's needed. That relaxes the need  
25 on many of the power lines, the existing Southwest power

CLEAVES & ASSOCIATES (619) 238-1415

Volume 3  
Comments and Responses

---

TRANSCRIPT OF PROCEEDINGS 10/6/2010

Page 63

1 line here for more capacity. And maybe the switching  
2 rule that you're talking about, if that's not the  
3 physical limitations of the line -- it's really a  
4 technical guideline for the disturbance when you switch  
5 off a load -- that might be handled some other way  
6 within a smart grid system I think.

7 So there's lots of other ways that it could be  
8 viewed and not put up as many towers and not spend as  
9 much money on Southwest Powerlink, which this is sort of  
10 heading towards, and not put the additional burden onto  
11 the owners here, and there is an economic impact to  
12 those.

13 So I think all of this to me says a different  
14 vision says take option number one. Let them figure out  
15 if it's profitable. Let them run it down there. That  
16 relieves the load being carried by the lines up here  
17 which is a different fight on different projects and so  
18 forth. So that's my summary.

19 DR. PELL: Thank you.

20 Donna, you wanted to say something further?

21 MS. TISDALE: I just forgot that I brought this  
22 map from the BLM that shows all the projects that are  
23 proposed in this area. BLM.

24 DR. PELL: The title of this map is, for the  
25 record, "El Centro Field Office Renewable Energy

CLEAVES & ASSOCIATES (619) 238-1415

TRANSCRIPT OF PROCEEDINGS 10/6/2010

Page 64

1 Projects."

2 MS. TISDALE: I believe it's dated  
3 January 2010.

4 UNIDENTIFIED VOICE: Sempra opened up an office  
5 down there in El Centro.

6 DR. PELL: Is there a date on the lower  
7 right-hand corner?

8 MS. TISDALE: It's up at the top.

9 MS. MEGAN SCHWARTZ: It's up at the top. It  
10 says January 2010, January 28, 2010.

11 DR. PELL: The agency that's labeled there?

12 MS. SCHWARTZ: Bureau of Land Management,  
13 El Centro Field Office.

14 DR. PELL: Thank you. Bureau of Land  
15 Management, El Centro Field Office.

16 MS. TISDALE: The Energia Sierra Juarez project  
17 is proposed right here, the border here. This is the  
18 Imperial Valley Solar project, 6,500 acres, that was  
19 approved. This is not included on the cumulative  
20 impacts.

21 DR. PELL: When you say "this," would you tell  
22 us what that is.

23 MS. TISDALE: I'm going to. It's the Ocotillo  
24 Express. It's about 15,000 acres of proposed wind  
25 energy that will abut the Jacumba Wilderness on the

CLEAVES & ASSOCIATES (619) 238-1415

TRANSCRIPT OF PROCEEDINGS 10/6/2010

Page 65

1 north side and Anza-Borrego Park on the west.

2 So this entire view shed, you would be able to  
3 see Sierra Juarez project over here on Interstate 8,  
4 which is now an open and very scenic area, will be  
5 covered with 40-foot-tall solar panels, 500-foot-tall  
6 turbines here, power lines coming through the way here,  
7 Sierra Juarez turbines here. This is Tule Wind here.  
8 This is the Campo Reservation. They've got plans all  
9 the way down to the border, to modify this BLM land for  
10 turbines, and over here is Tierra del Sol, Tecate Divide  
11 where Lansing Industries wants to put -- they've got  
12 plans for six or eight met towers now and they also have  
13 plans for --

14 MR. BROWN: They will be.

15 MS. TISDALE: -- more, 20- or 30-foot-tall  
16 solar panels as well as more solar panels over here. So  
17 this entire area -- and there's met towers proposed out  
18 here and in the Cleveland National Forest too if they're  
19 not already up.

20 DR. PELL: Proposed by?

21 MS. TISDALE: Debenham Energy. This Debenham  
22 Energy project shown here has been removed because the  
23 Navy has withdrawn that land for the SEALs training. So  
24 anyway, I just wanted all this information included.  
25 I'd prefer you get a copy of this from the BLM.

CLEAVES & ASSOCIATES (619) 238-1415

TRANSCRIPT OF PROCEEDINGS 10/6/2010

Page 66

1 DR. PELL: We can do that. Thank you, Donna.

2 MS. TISDALE: Thank you.

3 DR. PELL: Okay. Anybody else want to speak?

4 MR. SMITH: In the EIR, do you look at costs  
5 associated with the financial burden of the people?

6 DR. PELL: I'm sorry, Kevin. Try again. I  
7 couldn't hear you because of all the rustling.

8 MR. SMITH: In the EIR, do you look at the  
9 financial burden to the people?

10 DR. PELL: No.

11 MR. SMITH: Ever?

12 MS. JANSEN: They should.

13 DR. PELL: No.

14 MS. JANSEN: It's an economic impact, negative.

15 MR. SMITH: Why wouldn't you?

16 DR. PELL: Because it involves rate making and  
17 it involves local authorities and it's outside the  
18 boundaries of what goes into an Environmental Impact  
19 Statement.

20 MS. JANSEN: There are other impacts.

21 DR. PELL: You look at socioeconomic impacts  
22 but not at rate making.

23 MR. SMITH: Okay. Great, because I wasn't  
24 talking about rate making. This is not about that.

25 This is about the fact that each one of these people are

CLEAVES & ASSOCIATES (619) 238-1415

Volume 3  
Comments and Responses

---

TRANSCRIPT OF PROCEEDINGS 10/6/2010

Page 97

1 going to be burdened with the burden of the carrying  
2 costs of this. It is truly going to be billed onto  
3 their bill, their utility bill, in the future. That's  
4 what a ratepayer --

5 MS. JANSEN: And their fire insurance and, and,  
6 and.

7 MR. SMITH: And I don't think it really has  
8 been addressed how many people up here are fighting that  
9 same -- because I have a house on four acres and I  
10 understand what it's like to pay the insurance bill,  
11 because they don't want to insure you at all. They  
12 really want those suburb houses and I understand why.

13 But by the same token, if Sempra's going to  
14 come out here and put up a bunch of tower lines and  
15 bunch of turbines that pop into flames as we've seen on  
16 the YouTube and everything else, don't you think that  
17 they could put up a couple of firemen to help them?  
18 Wouldn't that be a natural thing in your position to add  
19 that?

20 DR. PELL: Okay.

21 MR. SMITH: Because I have off-sites and  
22 impacts in every project I've ever done. I've never  
23 seen a project where I didn't pay millions in off-sites  
24 and impacts, and I don't see any inside of this EIR, not  
25 any.

CLEAVES & ASSOCIATES (619) 238-1415

TRANSCRIPT OF PROCEEDINGS 10/6/2010

Page 68

1 DR. PELL: It's an interesting point. Thank  
2 you for bringing it up.

3 UNIDENTIFIED VOICE: Costs \$4,000 for a  
4 telephone pole.

5 DR. PELL: Anybody else wish to speak on the  
6 record?

7 UNIDENTIFIED VOICE: On the record or off the  
8 record, four grand.

9 DR. PELL: Nobody else wishes to speak?

10 UNIDENTIFIED VOICE: No.

11 DR. PELL: Are you sure? Going once.

12 Okay. We're going to hang around a little bit  
13 longer if you want to talk to us off the record, and  
14 we'll be in San Diego County tomorrow night if you want  
15 to join us in the City.

16 MR. BROWN: That meeting is from 5:00 to 7:00,  
17 so it's not from 7:00. So if you get off work and you  
18 want to go to the planning department. It's in the  
19 planning department. You know where the planning  
20 commission room is, hearing room? It's on Ruffin Road  
21 annex.

22 DR. PELL: Let the record show the meeting is  
23 adjourned.

24 (The proceedings were concluded at 8:36 p.m.)

TRANSCRIPT OF PROCEEDINGS 10/7/2010

Page 3

1 SAN DIEGO, CA, THURSDAY, OCTOBER 7, 2010, 5:12 P.M.

2

3 DR. PELL: I'll start by introducing myself.  
4 I'm Dr. Jerry Bell with the Department of Energy in  
5 D.C., and I'm with the Office of Electricity Delivery  
6 and Energy Reliability and I'm the project manager for  
7 the preparation of this Environmental Impact Statement.

8 And on my right is Patrick Brown with the  
9 San Diego County -- first thing I want to say, Patrick,  
10 is thank you for your hospitality in hosting this  
11 meeting tonight, and we'll introduce Patrick in greater  
12 detail in a moment.

13 But just by way of telling you how I'm going to  
14 run this thing, I have a short slide show to show you  
15 which you really don't need to stare at too carefully  
16 because it's just what I have as a handout. So if you  
17 picked up a copy of the handout, those are the slides  
18 you're going to be seeing on the screen, so you can just  
19 follow along from the written copy, and we will then  
20 take public comments for the record.

21 So let me introduce Patrick and then we'll  
22 start with the presentation.

23 MR. BROWN: Hi. I'm Patrick Brown. I'm with  
24 the County planning department. This is our planning  
25 commission hearing room, so I volunteered, we

CLEAVES & ASSOCIATES (619) 238-1415

TRANSCRIPT OF PROCEEDINGS 10/7/2010

Page 4

1 volunteered, this up for Jerry to give some of the folks  
2 that maybe get off work and can't get out in time to  
3 Jacumba or Boulevard or wherever, you know, to make the  
4 meeting. So I'm glad to see that many of you made it  
5 tonight so it wasn't a wasted offering. I'll actually  
6 mention this to the PUC on the East County Substation  
7 meetings, too. I think this has been rather successful  
8 at this point.

9           So I'm the land use environmental planner and  
10 project manager for the ESJ project for the County. I  
11 think a differentiation that needs to be made right  
12 upfront is that what Jerry's doing with DOE is for the  
13 Presidential permit. What the County's doing is for the  
14 County's Major Use Permit. Our processes are overlaid  
15 on top of each other. So that's why the County is a  
16 cooperating agency tonight, and I'll go into further  
17 detail later in the presentation.

18           DR. FELL: By way of additional introduction,  
19 I'm an environmental scientist. I've been with DOE for  
20 34 years, and I've been doing environmental scientific  
21 work of one kind or another for 40 years. So why do I  
22 still do this? Why haven't I retired? Because I enjoy  
23 what I do and I enjoy being at meetings with you. So as  
24 long as I keep having fun, I'm going to keep going, as  
25 long as my health holds up. So why retire when there's

CLEAVES & ASSOCIATES (619) 238-1415

1 good work to be done?

2 Turning to the slides, the -- all right. Make  
3 sure I'm reading from the right slide. The reason why  
4 the Federal Government's involved, as Patrick mentioned,  
5 is because the project developer, Sempra, provided an  
6 application, submitted an application, to the Department  
7 of Energy to build a transmission line that would cross  
8 the border from Mexico into the United States; and  
9 there's an executive order that came out of the White  
10 House that's on the books that's about 50 or 60 years  
11 old -- I think it goes all the way back to the 1950s --  
12 that requires Federal approval, an issuance of a permit,  
13 to cross the border with a transmission line or to move  
14 power across the border with a transmission line. So  
15 that's why it's called a Presidential permit, because  
16 the executive order obviously came out of the White  
17 House.

18 So that's the basic history of it. And once  
19 you have a Federal permit process, this immediately  
20 means that you're required to follow the rules of the  
21 National Environmental Policy Act to conduct the  
22 appropriate environmental analysis. In this particular  
23 case, the proposed project is what we consider to be a  
24 major Federal action, which is a term of art, and the  
25 nature of the project is such that we're now doing an

TRANSCRIPT OF PROCEEDINGS 10/7/2010

Page 6

1 Environmental Impact Statement.

2 The history of the project: If you look at the  
3 slide, the original application came to us in December  
4 of 2007, so it's almost three years from the application  
5 to this report. So a lot of work has been done in the  
6 interim. The process originally started with a  
7 colleague of mine, not myself, as an environmental  
8 assessment, and by February of '09 it was decided that  
9 an environmental assessment was not adequate and that we  
10 should do a full-fledged Environmental Impact Statement,  
11 which is what we have now.

12 It was issued on September 17, and there's a  
13 45-day comment period. The clock started ticking on  
14 that September 17 date. It closes on the 1st of  
15 November. So any material you want to submit subsequent  
16 to tonight, between now and the 1st of November, whether  
17 you want to submit it on our Web site, which is what I  
18 would recommend, or send it to me directly by e-mail or  
19 by regular mail, you still have until November the 1st  
20 to provide additional material.

21 If you're going to send me something on paper,  
22 please do not send it to DOE by regular mail because it  
23 gets held up. It goes through security screening and it  
24 literally fries the document. So I have received stuff  
25 that has been xeroxed where the carbon particles that

CLEAVES & ASSOCIATES (619) 238-1415

1 constitute the xerox ink dissolved into pages that are  
2 all stuck together and you just take it out of the  
3 envelope and throw it in the trash. You can't separate  
4 the pages.

5           So if you're going to send me something to the  
6 agency that's on paper, send it by FedEx or UPS or USPS  
7 overnight or some similar service so it avoids the  
8 security screening. Also, it delays it about two weeks.  
9 So that's why it's actually best to submit it  
10 electronically.

11           Once the comment period closes on the 1st of  
12 November, all the comments will be made available on the  
13 project Web site. Everything that we receive is public.  
14 The transcripts that the court reporter is preparing  
15 from the three nights, tonight and last two nights, will  
16 be on that Web site.

17           We will then enter the final EIS preparation  
18 phase which will essentially constitute responding to  
19 the comments that came in during the comment period, and  
20 then a final EIS will be issued and then DOE will  
21 prepare a Record of Decision, which is exactly how it  
22 sounds. It's the document that will summarize what was  
23 in the EIS and which of the alternative actions the  
24 government has decided to take.

25           And if you read the study, there are

TRANSCRIPT OF PROCEEDINGS 10/7/2010

Page 8

1 alternatives in the study, one of which is the no action  
2 alternative where the Record of Decision would recommend  
3 denying the Presidential permit. If the Record of  
4 Decision favors the Presidential permit, then we would  
5 issue the Presidential permit as a separate document,  
6 typically almost at the same time. So that's where we  
7 stand.

8 The next two slides pertain to the County's  
9 process, and at that point I will let Patrick do them  
10 justice because that's under his jurisdiction.

11 MR. BROWN: Okay. As I mentioned previously,  
12 the County is a cooperating agency with DOE, and the  
13 reason why we're a cooperating agency is the County is  
14 the permitting authority for the construction and  
15 ongoing operation of the proposed generation-tie line.

16 So Semptra made an application with the County  
17 for a Major Use Permit for a major impact service  
18 utility for the five lattice towers, or actually it will  
19 be four lattice towers, and the lines that go across  
20 from Mexico.

21 The County's been participating with the  
22 California Public Utilities Commission, BLM, on a joint  
23 EIR/EIS for the East County Substation. Because the  
24 gen-tie line was hooking into the East County  
25 Substation, the PUC considered it a connected action as

CLEAVES & ASSOCIATES (619) 238-1415

Volume 3  
Comments and Responses

---

TRANSCRIPT OF PROCEEDINGS 10/7/2010

Page 9

1 well as they did with the Tule Wind farm.

2 So the document that the County would be using  
3 for the Major Use Permit for the environmental  
4 processing is not this EIS that's prepared by DOE, but  
5 it would be the EIR/EIS that's being prepared by the  
6 California Public Utilities Commission. We are what we  
7 consider a responsible agency. We're not the lead  
8 agency, but we're the responsible agency under CEQA for  
9 that process.

10 So I believe I covered up on that pretty good  
11 tonight. I'm getting better, third night.

12 DR. FELL: Good practice.

13 MR. BROWN: So anybody wants to know more about  
14 that, you know, feel free to contact me, but we're here  
15 participating. We're also providing comment as well,  
16 consistency comments and other comments, on how the  
17 project would affect the County.

18 And this EIS, just so you know, the County did  
19 review all the technical studies that were prepared for  
20 this, many of them I should say, for County standards  
21 and pursuant to our guidelines determined the  
22 significance. Entrix, the contractor, which is Tim and  
23 Megan there, they used the technical studies that the  
24 County had reviewed to make sure that they're in  
25 compliance with our ordinances and guidelines such as

CLEAVES & ASSOCIATES (619) 238-1415

TRANSCRIPT OF PROCEEDINGS 10/7/2010

Page 10

1 like the noise ordinance and lighting ordinance. They  
2 used those in preparation of this EIS, so we did have a  
3 hand in providing technical information per the County's  
4 standards.

5 DR. PELL: Okay. You mentioned Entrix.  
6 Patrick just mentioned Entrix, which reminds me I want  
7 to be on the record thanking Entrix, Tim and Megan and  
8 the staff, for doing all of the physical labor to put  
9 these meetings together and prepare the documents and  
10 bring all the materials to the meetings and set up slide  
11 projectors and what have you. So they've done a great  
12 job, and so I just want the record to note my  
13 appreciation.

14 Okay. The next slide is just a quick overview  
15 of the project itself. I assume if you're here, you  
16 probably know what it's about. The proposal is to  
17 construct a transmission line of either 230,000 volts or  
18 500,000 volts from a proposed wind farm in Baja  
19 California that will connect the energy from that wind  
20 farm to the proposed ECO Substation, ECO being the  
21 East County Substation, of course.

22 The next slide, Tim, please. The length of the  
23 line on the U.S. side of the border is only .65 miles  
24 long which is, you know, 3,000-odd feet. So it only  
25 requires on the American side five towers to hold the

CLEAVES & ASSOCIATES (619) 238-1415

1 line, and they can be either the standard conventional  
2 lattice towers which you usually see on transmission  
3 lines or monopoles.

4           If you look in the document, there are diagrams  
5 there that show the two different styles. It's  
6 interesting that the analysis seems to favor the  
7 lattice-type tower as being less obtrusive visually than  
8 the monopoles, which frankly was a surprise to me  
9 because I would normally think the monopoles would be  
10 less visible. So that's why we have these experts.

11           On the south side of the border, the line  
12 extends for about a mile, I believe, to where it  
13 connects to a substation that then goes to the wind  
14 machines on the Baja California side.

15           Okay. The wind machines for the first phase of  
16 the proposed project would number about 52 at a nominal  
17 2 1/2 megawatts per machine, although the company tells  
18 me they haven't picked a precise model or vendor yet.  
19 You're looking at a proposed generation capacity in the  
20 first phase of about 130 megawatts of power.

21           Long-term, as you'll see in the document, the  
22 project is hoping to add additional phases for an  
23 ultimate build-out that would equal approximately  
24 1,250 megawatts in electrical capacity. All of those  
25 additional build-outs would be south of the starting

TRANSCRIPT OF PROCEEDINGS 10/7/2010

Page 12

1 Phase 1 area. So all of the turbines, all of the wind  
2 machines, in subsequent phases would be further away  
3 from the U.S. border. The closest wind machine, I  
4 believe, to the border would be about .7 miles south of  
5 the border.

6 Okay. Next slide, Tim. In the process of  
7 conducting the preparation of the Environmental Impact  
8 Statement, we consulted with numerous appropriate  
9 agencies, both Federal, State, and local including the  
10 ones you see on the screen. Fish and Wildlife Service  
11 we consulted with.

12 We sent letters of invitation to consult to the  
13 known 15 Indian tribes in the general area, of which one  
14 actually elected to go to consultation with us and that  
15 was the Campo tribe, and that consultation process was  
16 completed satisfactorily in the fall of '09.

17 Other agencies we consulted with are the Border  
18 Patrol, as you might expect considering their presence  
19 in the area, Bureau of Land Management, Federal Aviation  
20 Administration with regard to aircraft concerns,  
21 Environmental Protection Agency, and several California  
22 State agencies including Fish and Game and Parks and  
23 Recs, the State Historic Preservation Officer, and, of  
24 course, Patrick's been involved on behalf of the County  
25 of San Diego.

CLEAVES & ASSOCIATES (619) 238-1415

1 In terms of the environmental issues we looked  
2 at, they run the spectrum of all of the areas of  
3 potential environmental impact that is comprehensively  
4 included in a normal EIS, everything from biological  
5 resources to environmental justice, and you'll see all  
6 of that in the document.

7 Just to summarize a couple of the findings,  
8 biological resources, the report concludes that indeed  
9 there would be a temporary habitat disturbance during  
10 the construction phase of the line. Because of the  
11 installation of the towers, there'd be permanent  
12 disturbance to about ten acres. That's collectively  
13 adding up all the areas of all the towers and other  
14 physical plant that might be involved.

15 And there is a definite potential for increased  
16 fire risk as well which we can talk about, but it's well  
17 documented in the report.

18 With regard to special status species, some of  
19 these names will probably be very familiar to you. The  
20 Quino checkerspot butterfly was determined to undergo no  
21 impacts by virtue of the project; California condor,  
22 very low probability of occurrence in the project  
23 region; Peninsular bighorn sheep, critical habitat  
24 avoided. I understand that some of you have found that  
25 the bighorn sheep do stray from the critical habitat,

TRANSCRIPT OF PROCEEDINGS 10/7/2010

Page 14

1 but as far as the critical habitat area itself is  
2 concerned, that is essentially two miles east of the  
3 proposed site.

4 Other species, arroyo toad, southwestern willow  
5 flycatcher, and a bird called the Least Bell's Vireo,  
6 low potential for effect.

7 Next slide, please. Under Visual Resources, we  
8 do find the transmission lines will be visible from  
9 several Key Observation Points, which are abbreviated in  
10 the document as KOPs. There are ways to reduce the  
11 impacts including such things as, as I was mentioning  
12 earlier, the lattice towers being preferable to  
13 monopoles.

14 If you look in the document itself, you will  
15 see a number of visual representations, and they're on  
16 these charts on these easels over here on my left, that  
17 show you representations of how they would look before  
18 and after construction.

19 The next slide lists potential mitigation for  
20 the transmission lines with regard to visibility. That  
21 includes reduced reflectivity and visual contrast,  
22 reduced color contrast, et cetera, but I will leave it  
23 to you to look in the report itself where it's  
24 documented in great detail.

25 The next slide refers to a Table 2-3 which I

CLEAVES & ASSOCIATES (619) 238-1415

1 ask you to consider. If you look at no other part of  
2 the report, that is probably the heart of the  
3 Environmental Impact Statement because it summarizes in  
4 several pages the expected or potential impacts by  
5 resource areas, so I just wanted to bring that table to  
6 your attention. That table is reproduced in the summary  
7 as well as in the full-blown Environmental Impact  
8 Statement, also.

9           Next slide. Again, to reiterate, we look  
10 forward to hearing your comments on the adequacy,  
11 completeness, and technical accuracy of the analysis in  
12 the Environmental Impact Statement. You can send it to  
13 me directly or, as you see here on the slide, to our  
14 project Web site where you can also upload attachment  
15 files if you like.

16           The document's available on that Web site.  
17 It's also available on the DOE agency, Environmental  
18 Impact Statement NEPA office Web site. The address is  
19 on that slide as well, and again reminding you about the  
20 November 1st deadline.

21           Let me just add, if circumstances are such that  
22 you can't possibly meet that deadline or if you come  
23 across supplemental materials you think are important  
24 that you submit, you can come in later than November the  
25 1st. But after November the 1st, it's on the basis of

TRANSCRIPT OF PROCEEDINGS 10/7/2010

Page 16

1 whether we can practically consider your comments. If  
2 you come in November 2nd or 3rd, of course, it's not  
3 going to be a problem. If you come in the following  
4 June, we might be at the printer and we would not be  
5 able to consider your comments.

6 So I ask you to please do try to make that  
7 November the 1st deadline, but if you can't make it,  
8 it's not too late. And if you have an issue that you  
9 want to discuss with me, then just call me or e-mail me  
10 or whatever and we'll be glad to discuss with you the  
11 submittal of subsequent documents or comments after that  
12 closing date.

13 All of the major contact parties that are  
14 involved with the project are shown in the handout or  
15 the slide. I'm there. Patrick's there. Tim Murphy,  
16 our consultant from Entrix who prepared the EIS sitting  
17 back there, is on there, as well as Alberto Abreu on  
18 behalf of Semptra. So we're not hard to get a hold of.

19 That completes the slides themselves, and we  
20 will now enter the taking of comments for the record.

21 Ms. Donna Tisdale who is with us tonight, was  
22 also with us in Jacumba and Boulevard, and she came up  
23 from down there to be here with us tonight and she asked  
24 me to make a special exception to let her go first  
25 because she has a meeting that she has to get back to as

CLEAVES & ASSOCIATES (619) 238-1415

1 soon as she's through. So we'll extend the courtesy to  
2 Ms. Tisdale to start off and then go on to the list.

3 I ask you to please keep in mind that you are  
4 being transcribed by a court reporter, so please try to  
5 speak slowly and articulate clearly so that she gets  
6 down the words that you want her to record.

7 MS. DONNA TISDALE: Thank you and thank you for  
8 letting me go first. Donna Tisdale and, once again, I'm  
9 representing myself as an individual, the Boulevard  
10 Planning Group, Backcountry Against Dumps, and the  
11 Protect Our Communities Foundation.

12 The ESJ project is proposed by Energia Sierra  
13 Juarez, a subsidiary of Sempra Generation which is a  
14 subsidiary of Sempra Energy. Sempra Energy had revenues  
15 of 12 billion in 2006, 11 billion in 2008, and 8 billion  
16 in 2009. In a 2006 report, they stated they had  
17 provided investors with an average annual return in  
18 excess of 15 percent.

19 It was announced in the attached September 28th  
20 press release that Luis Tellez, who currently serves as  
21 chairman of the board and chief executive officer of the  
22 Mexican Stock Exchange, was reelected to join Sempra  
23 Energy's board of directors. The press release also  
24 states that, quote, As a government official Tellez was  
25 a key player in crucial policy decisions to improve the

TRANSCRIPT OF PROCEEDINGS 10/7/2010

Page 18

1 structure of the Mexican economy, agriculture,  
2 infrastructure, and energy, unquote.

3           One can surmise that Mr. Tellez has likely been  
4 handsomely rewarded for no doubt helping Sempra with  
5 their multibillion dollar investments in their natural  
6 gas infrastructure in Mexico, with shepherding those  
7 projects and this ESJ project through the Mexican  
8 permitting agencies, and it sounds like a very  
9 convenient and profitable partnership for both Sempra  
10 and Mr. Tellez. I believe a large part of that profit  
11 has come at the expense of the Mexican people, their  
12 impacted communities, and their resources.

13           I'm providing a copy of the map showing  
14 Sempra's natural gas pipelines in northern Baja. One  
15 pipeline runs through the ESJ lease area. A new water  
16 line was installed for the same area in the last few  
17 years. In the future, a gas-fired power plant could be  
18 built in the ESJ area that could access the proposed  
19 cross-border power line with an amended Presidential  
20 permit.

21           On the Mexican social injustice --  
22 social/environmental injustice issues on the Mexican  
23 side, ESJ is an export-only wind energy project. It's  
24 my understanding that under Mexican law, Sempra can  
25 write off 100 percent of the cost of their ESJ turbine

CLEAVES & ASSOCIATES (619) 238-1415

1 project to an accelerated depreciation tax incentive for  
2 renewable energy projects.

3           Therefore, the Mexican people will bear the  
4 financial burden of building Sempra's wind energy  
5 project that will not provide any energy whatsoever to  
6 Mexico. They will be subsidizing 100 percent of the  
7 building of the ESJ wind project that will be exported  
8 for use for American consumers. If that is not a social  
9 and environmental injustice, I don't know what is. This  
10 is just one of many examples of how Sempra runs  
11 roughshod over the Mexican people and their resources  
12 while reaping incredible profits from their self-serving  
13 actions.

14           It has been stated that the Mexican  
15 environmental permit for this project has been approved.  
16 Department of Energy must understand that the first  
17 approval is heavily conditioned. Those conditions  
18 include a one-year avian study, a change in land use  
19 designation away from forest lands, and Sempra is  
20 required to provide specifics on the turbine  
21 manufacturers, GPS locations for each turbine, road, and  
22 project accessory. All of these conditions must be met  
23 at least six months prior to any construction.

24           The Mexican approvals are far from a done deal  
25 which is why they told the press, why Sempra told the

TRANSCRIPT OF PROCEEDINGS 10/7/2010

Page 20

1 press, they will not build the project until it is  
2 needed. The project may never be built, and this  
3 Presidential permit can then be amended to allow the  
4 transmission of nonrenewable energy from Sempra's  
5 multibillion dollar Mexican natural gas infrastructure  
6 including their existing gas line that runs through the  
7 Energia Sierra Juarez lease area.

8 On the local U.S. social and environmental  
9 justice issues --

10 DR. PELL: Excuse me, Donna. I just missed  
11 that whole sentence. On the local?

12 MS. TISDALE: On the local U.S. social and  
13 environmental justice issues, it has been falsely stated  
14 that the locally impacted U.S. communities of Jacumba  
15 and Boulevard are not low income and there are no  
16 environmental justice issues.

17 I am providing two printouts from  
18 greatschools.org. Our two rural communities share  
19 two campuses. My two youngest granddaughters attend  
20 these schools. The printout show that Jacumba  
21 Elementary with grades K through 2 has 50 students with  
22 62 percent participating in the free or reduced-lunch  
23 program. The state average is 51 percent. 28 percent  
24 are English learners. The state average is 24 percent.

25 Clover Flat Elementary in Boulevard with grades

CLEAVES & ASSOCIATES (619) 238-1415

1 3 through 6 has 84 students with 91 percent  
2 participating in the free or reduced-lunch program. The  
3 state average is 51 percent. English learners are  
4 23 percent with a state average of 24 percent.

5 We have a higher number of Native American  
6 students with 8 percent at Jacumba Elementary and  
7 12 percent at Clover Flat. State average is less than  
8 1 percent. One would assume that the vast majority of  
9 students on the Mexican side of Jacume and La Rumorosa  
10 are of Latino heritage.

11 For the record, I'm submitting 42 pages I  
12 printed off of our Backcountry Against Dumps Web site to  
13 show the extent of number and large-scale energy and  
14 transmission projects represent a significant,  
15 cumulative, and negative impacts to our natural  
16 resources, our low-income communities, our local  
17 properties, our quality of life, and more.

18 And as I have stated previously, our group will  
19 be submitting much more detailed comments by the  
20 November 1st deadline, and I will hand you copies of  
21 these pages.

22 And I also for the record include a copy of the  
23 documentary that our group put together on the Sunrise  
24 Powerlink which includes a video of the CEO, Sempra CEO,  
25 talking about how natural gas is a backup and it's

TRANSCRIPT OF PROCEEDINGS 10/7/2010

Page 22

1 needed for intermittent wind and solar.

2 DR. PELL: Donna, the 42 pages you referred to,  
3 is it possible for us to get that electronically?

4 MS. TISDALE: Yes, but I wanted to put it in  
5 the record because --

6 DR. PELL: That's fine. That's fine. It's  
7 just easier for us to --

8 MS. TISDALE: Oftentimes you give somebody a  
9 link and they never open it.

10 DR. PELL: No, but the reason I ask is if you  
11 give it to us electronically, then it's easy for us to  
12 post on the Web site for all to see. It just  
13 facilitates it.

14 MS. TISDALE: Thank you very much.

15 DR. PELL: There's 42 pages less of scanning.

16 MS. TISDALE: I understand. I just want it in  
17 the record. Thank you.

18 DR. PELL: Thank you very much, Ms. Tisdale.

19 We now move on to Johnny Simpson who's with the  
20 International Brotherhood of Electrical Workers.

21 MR. JOHNNY SIMPSON: Hi. My name is  
22 Johnny Simpson. I'm business manager of the  
23 International Brotherhood of Electrical Workers,  
24 Local 569, representing over 2,100 members throughout  
25 San Diego and Imperial counties. IBEW Local 569 is here

CLEAVES & ASSOCIATES (619) 238-1415

1 today speaking in opposition to Sempra's energy  
2 application for a Presidential permit to construct a  
3 cross-border transmission line between northern Baja  
4 Mexico and San Diego County.

5         The transmission project proposed in this  
6 application would undermine several goals in Obama's  
7 administration. Specifically, one, it would facilitate  
8 offshoring of American jobs. Sempra's cross-border  
9 transmission lines would enable the company to build  
10 energy projects in Mexico and import the energy into the  
11 United States instead of building them here where the  
12 power is being used. This moves our economy in the  
13 wrong direction at a time when we should be creating  
14 jobs in the U.S.

15         Two, it would increase the United States  
16 dependency upon imported energy. The administration has  
17 emphasized the need for America to become energy  
18 independent. Approving a cross-border transmission line  
19 to import energy from Mexico is the exact opposite of  
20 the President's stated goal. Our nation's economic  
21 future and security depends on developing energy  
22 infrastructure within our borders.

23         Three, it would undermine American  
24 environmental and labor laws. A core component of  
25 President Obama's campaign was his commitment to green

TRANSCRIPT OF PROCEEDINGS 10/7/2010

Page 24

1 economy that would usher in a period of environmental  
2 advancement and economic prosperity. Construction of a  
3 cross-border transmission line will undermine the  
4 President's vision by enabling Sempra Energy to deliver  
5 electricity to the United States from foreign facilities  
6 not built to American labor and environmental standards.

7 If we are to reclaim America's middle class,  
8 our nation must eliminate opportunities for corporations  
9 to export our jobs, exploit our workers, and raid our  
10 national resources. For these reasons, we respectfully  
11 request the Department of Energy to reject Sempra's  
12 application for a cross-border Presidential permit.

13 DR. PELL: Thank you very much, Mr. Simpson.  
14 Appreciate that.

15 I now have Barbara Garcia representing the  
16 Sierra Club.

17 MS. BARBARA GARCIA: Hello. My name is  
18 Barbara Garcia and I'm here representing the Sierra  
19 Club, San Diego, and their position in this matter.

20 The Sierra Club would like to express its  
21 support in the denial of Sempra Energy's application for  
22 this Presidential permit. The concerns are that this  
23 application would severely undermine American  
24 environmental and labor laws.

25 The Obama Administration expressed their

CLEAVES & ASSOCIATES (619) 238-1415

**RESPONSE TO 603-1:** Potential socioeconomic impacts associated with short-term jobs from the ESJ U.S. Transmission Line project are addressed in EIS Section 3.13. Comments pertaining to the merits of the project with respect to labor policy, federal energy policy, and California utility regulations are outside the scope of the NEPA process. DOE will consider these comments as well as all other comments received in that proceeding before making a final determination on the permit application.

603-1

1 commitment to a green economy that could lead us --

2 THE REPORTER: I'm sorry. You're going to have  
3 to speak a little bit slower.

4 MS. GARCIA: Sorry. The concerns are that this  
5 application would severely undermine American  
6 environmental and labor laws. The Obama Administration  
7 expressed their commitment to a green economy that could  
8 lead us into a new era of environmental and economic  
9 prosperity.

10 By approving cross-border transmission lines,  
11 you are undermining this goal by allowing energy to be  
12 delivered into the United States by Sempra Energy from  
13 facilities that are built outside of the U.S. and,  
14 therefore, not in accordance with our labor and  
15 environmental standards, not to mention allowing this  
16 would facilitate the offshoring of American jobs.

17 Putting in cross-border transmission lines  
18 would allow Sempra Energy to build energy projects in  
19 Mexico and then import that energy into the U.S. instead  
20 of building them inside where the power is being used.  
21 This takes job possibilities away from Americans at a  
22 time when we should be looking for every opportunity to  
23 revive our economy and put Americans back to work.  
24 Therefore, we respectfully request that you reject  
25 Sempra's application.

603-1

TRANSCRIPT OF PROCEEDINGS 10/7/2010

Page 26

1 DR. PELL: Thank you very much, Ms. Garcia.  
2 We now have Shannon Dougherty with San Diego  
3 Audubon Society.

4 MS. SHANNON DOUGHERTY: The San Diego Audubon  
5 Society is concerned about impacts to migratory birds  
6 including raptors, neo-traffic migrants, and  
7 winter-season avian visitors that may result from the  
8 construction of this transmission line.

9 We would like to see information detailing the  
10 survey methodology included in the final EIS and expect  
11 that a comprehensive survey approach is utilized  
12 including radar monitoring to assess nighttime migration  
13 and monitoring at different times of the year and day to  
14 capture seasonal variability in avian populations.

15 We'd also like to view the data that informed  
16 the determination that the project site is not located  
17 within a known migratory corridor or flyway. We are  
18 concerned that because the transmission line project  
19 site is located between two important montane bird  
20 areas --

21 DR. PELL: I'm sorry. What was that word  
22 again?

23 MS. DOUGHERTY: Two important montane,  
24 mountain, bird areas.

25 DR. PELL: Mountain bird areas.

CLEAVES & ASSOCIATES (619) 238-1414

TRANSCRIPT OF PROCEEDINGS 10/7/2010

Page 27

1 MS. DOUGHERTY: -- that live in the mountains  
2 in the Sierra de Juarez that are characterized by high  
3 ridgelines, foraging rafters and other migrants will be  
4 impacted. The project location is a potential and  
5 presumed avian corridor of birds moving from north to  
6 south along the cross-border ridgeline. In fact,  
7 Jacumba and In-Ko-Pah villages are locally recognized  
8 migrant traps due to the presence of seasonal water  
9 resources and agricultural influences.

10 Because this transmission line can impede the  
11 cross-border movement of birds as a result of connected  
12 actions in Mexico, we consider that Energia Sierra  
13 Juarez wind project to be an indirect impact of this  
14 project. We are concerned that construction of the  
15 proposed wind project and the associated transmission  
16 line can impede the cross-border movement of raptors and  
17 migratory birds and will affect bird behaviors in ways  
18 that significantly impact local populations.

19 We are specifically concerned with impacts to  
20 golden eagles since this project site is located within  
21 a known wintering location and is immediately adjacent  
22 to a confirmed breeding location for this species.  
23 Currently, electrocution on power lines is the largest  
24 source of mortality for this species. We would like to  
25 see detailed information on how these impacts will be

CLEAVES & ASSOCIATES (619) 238-1415

TRANSCRIPT OF PROCEEDINGS 10/7/2010

Page 28

1 mitigated in the final review document.

2 Lastly, there should also be a protocol in  
3 place that ensures additional and adaptive mitigation  
4 measures will be devised and implemented should avian  
5 and other wildlife populations be negatively impacted  
6 during project operations.

7 We would like to see a protocol in place that  
8 would facilitate the sharing of monitoring data among  
9 projects considered in the cumulative effects analysis  
10 so that any cumulative impacts can be identified and  
11 addressed in a timely and effective manner.

12 DR. PELL: Thank you very much. Appreciate it,  
13 Shannon.

14 We now have Daniel Coffey.

15 MR. DANIEL COFFEY: Yes. I find myself --  
16 first of all, my name is Daniel Coffey. My back is --

17 DR. PELL: I'm sorry. Could you do me a favor.  
18 Could you come up a little bit closer because it would  
19 make it easier for us to hear and for the court reporter  
20 to hear you.

21 MR. COFFEY: Sure. My name is Daniel Coffey.  
22 My background is in engineering and law and  
23 environmental issues, and I also write an opinion column  
24 for The Daily Transcript and I've written quite a lot,  
25 something in the neighborhood of about 50 columns on

CLEAVES & ASSOCIATES (619) 238-1415

1 renewable energy issues.

2 DR. PELL: What is The Daily Transcript?

3 MR. COFFEY: It's the official legal newspaper  
4 for printing legal news or notices in the County of  
5 San Diego and it's also a business newspaper that's read  
6 by a variety of businesses.

7 DR. PELL: Specific to the County?

8 MR. COFFEY: Well, it's got an online presence.  
9 So I don't know, but its service as the official notice  
10 paper is for the County of San Diego. Its function as a  
11 newspaper obviously reaches beyond the County, as do  
12 most other online and/or print newspapers.

13 DR. PELL: Thank you.

14 MR. COFFEY: I find myself, having studied this  
15 issue quite a lot, in support of it because it's a very  
16 small project but its impact in terms of the renewable  
17 energy profile that it brings to the Southwest is very  
18 significant, because in the area where it is in northern  
19 Mexico there isn't much use for that much energy in the  
20 Mexican economy. There might be, but at the current  
21 time it doesn't seem that that's something that they're  
22 particularly interested in.

23 However, there's a great deal of use within the  
24 United States and a great deal of need for renewable  
25 energy which is not carbon-producing. And so as a

**RESPONSE TO 603-2:** Refer to the response to comment 305-1 for information on assurances that the transmission line would be used only to transmit electricity generated from renewable sources.

603-2

TRANSCRIPT OF PROCEEDINGS 10/7/2010

Page 30

1 consequence, the other impacts that have to be weighed  
2 against the benefits to the environment that this  
3 particular project presents, at least in my mind, don't  
4 equate. There's a huge benefit. There's a huge benefit  
5 and a very, very tiny -- excuse me -- a very, very tiny  
6 impact.

7 I understand that opponents of this project  
8 have opposed basically everything having to do with  
9 transmission or construction of any kind of project  
10 having to do with energy production on the theory that  
11 there's going to be a utilization of coal or natural gas  
12 or something else that's going to be transmitted across  
13 this line. My understanding is that that will not occur  
14 and I think there's no provision for that within the  
15 Presidential permit, so I see no downside for permitting  
16 this particular project.

17 As far as the specific environmental issues,  
18 I'm going to submit comments for the record, but I just  
19 wanted to say, you know, as far as I can tell, this is a  
20 very good project, being handled with extreme care, at a  
21 very high level of environmental review, and that the  
22 objections to it, you know, frankly don't seem to have a  
23 lot of weight. So thank you very much.

24 DR. PELL: Thank you, Mr. Coffey. I appreciate  
25 that.

CLEAVES & ASSOCIATES (619) 238-1415

603-2

1           Somebody that's been with us before, let me  
2 welcome back Kevin Smith.

3           MR. BROWN: Cameo appearance.

4           MR. KEVIN SMITH: Actually, I am a supporter of  
5 wind energy and I heard what you said. I am not a  
6 supporter of an unfair advantage, and that's what I  
7 believe this is.

8           Sempra has the ability to pay for any  
9 interconnects they need, and in this choice they've  
10 chosen not to. They've placed the burden on SDG&E, and  
11 that's where I think if you were to do a little bit more  
12 research, you'd find out that would be the case.

13           They drop on the other side of the border where  
14 there's nothing -- on our side of the border, but  
15 there's nothing there for them to touch into and, voila,  
16 SDG&E puts in substations. That's unique. I wish I got  
17 that opportunity. The opportunities for us who try to  
18 develop wind are the exact opposite. We'll get no  
19 interconnect. We'll get no time. We'll get nothing.  
20 Write a check for a quarter of a million dollars and we  
21 can talk about it. We'll tell you what's on the line.

22           Don't tell us what's on the line. There's  
23 nothing on the south link. That's what Sempra's going  
24 into. There is no capacity. And I disagree with the  
25 80, by the way. It's 40 that's available, but it sure

**RESPONSE TO 603-3:** Potential socioeconomic impacts associated with short-term jobs from the ESJ U.S. Transmission Line project are addressed in EIS Section 3.13. Comments pertaining to the merits of the project with respect to labor policy, federal energy policy, and the applicant's business practices are outside the scope of the NEPA process. DOE will consider these comments as well as all other comments received in that proceeding before making a final determination on the permit application.

603-3

TRANSCRIPT OF PROCEEDINGS 10/7/2010

Page 32

603-3

1 is a far cry from 1,200. Either way it shouldn't be  
2 allowed. Thank you.

3 DR. PELL: Thank you, Kevin.

4 That completes the list of speakers that I have  
5 in front of me, so it's now open mic to anybody who  
6 would like to speak. We'd be glad to entertain that.

7 Yes, ma'am.

8 MS. JULIA GRIESS: I'm sorry. I had one filled  
9 out already.

10 MR. BROWN: Anybody else? Just let us know.

11 MS. GRIESS: My name is Julia Griess. I'm a  
12 concerned citizen opposing the way SDG&E and Sempra have  
13 gone about securing property in this area.

14 It appears SDG&E and Sempra have breached the  
15 China Wall. I was involved in an 8,000-acre development  
16 near Donna Tisdale. My sister lost her home on 25 acres  
17 in 2003. If you have never been threatened by fire, it  
18 is horribly stressful and scary. I rescued her dog as  
19 flames licked my car on Interstate 8. We were the last  
20 car to leave. No fire trucks went down her street -- I  
21 don't know why I'm getting so emotional. No trucks went  
22 down her street and about 63 out of 100 homes were lost.

23 In behalf of Donna Tisdale living through that,  
24 it took about a year for her to recover her life because  
25 it took -- it was so long, so many homes had been lost.

CLEAVES & ASSOCIATES (619) 238-1415

Volume 3  
Comments and Responses

---

TRANSCRIPT OF PROCEEDINGS 10/7/2010

Page 33

1 It took almost three months just to get a telephone pole  
2 installed in her area. So she gave up and moved back to  
3 the city, but I just thought I'd show you some of the  
4 images that Donna wanted me to share with you, if you  
5 want to see.

6 DR. PELL: Julia, do you have those in a format  
7 that we could provide on the Web site or --

8 MS. GRIESS: Sure, I could e-mail them to you.

9 DR. PELL: Please, because otherwise nobody  
10 other than the people here will ever see them.

11 MS. GRIESS: Yeah. Okay. Yeah, I can --

12 DR. PELL: Can you describe them for the  
13 record, what the photos are.

14 MS. GRIESS: This is a nighttime shot that was  
15 similar to what happened in the December 7th. I'm  
16 sorry. Yeah, the Boulevard, the 25 turbines that were  
17 there. There was witnesses that there was a blue glow  
18 and then the blue glow exploded and jumped to each wind  
19 turbine, I think pretty much destroying all the wind  
20 turbines. So all of the blades had to be replaced, and  
21 I believe the blades are still strewn around the area in  
22 Boulevard.

23 DR. PELL: Do you know whose wind machines they  
24 were?

25 MS. GRIESS: What's the name of it? It's a

CLEAVES & ASSOCIATES (619) 238-1414

TRANSCRIPT OF PROCEEDINGS 10/7/2010

Page 34

1 Spanish -- you mean the manufacturer of the wind  
2 turbines?

3 DR. PELL: No, no, no, no. Who erected --  
4 whose land were they on? Who owns them?

5 MR. SMITH: It's Campo's.

6 MR. BROWN: It's Campo.

7 MS. GRIESS: And then these were some other  
8 images of when the blade releases from the wind  
9 turbines. This is only 60 wind turbines in this  
10 photograph.

11 This is another explosion and this is -- I  
12 think in your IRS [sic] report it says that this is the  
13 most arid, driest area in California, so the chances  
14 of fire, they live with it daily.

15 This is a -- it's a rural area with a wind  
16 turbine that has caught fire.

17 And this is another wind turbine with the fire  
18 going all the way up the -- well, I'm at a loss of words  
19 here. This is probably close to the image that's out in  
20 Boulevard with the 25 wind turbines.

21 This is a wind turbine to show the size of it  
22 that has been knocked over.

23 And this is just another shot of the wind  
24 turbine that has been knocked over.

25 MR. ROBERT THOMPSON: Were those in the County?

CLEAVES & ASSOCIATES (619) 238-1414

Volume 3  
Comments and Responses

TRANSCRIPT OF PROCEEDINGS 10/7/2010

Page 35

1 DR. PELL: I'm sorry? Please identify  
2 yourself.

3 MR. THOMPSON: Oh, my name is Robert Thompson.

4 DR. PELL: I'd prefer that we didn't have --

5 MR. THOMPSON: Cross talk. Okay.

6 MS. GRIESS: Okay. Thank you very much for  
7 allowing me to speak. And I'll e-mail these. Donna  
8 e-mailed these, so I'll have her forward those to you.

9 DR. PELL: Great. Julia, just to make sure we  
10 have it right, is it J-u-l-i-a G-r-i-e-s-s?

11 MS. GRIESS: Yes.

12 DR. PELL: Thank you. Thank you very much.  
13 I'm just curious actually. Just as a little bit of a  
14 amateur photographer myself, how were those photos  
15 taken? Do you know? I mean, who happened to be at the  
16 vicinity at the time? Do you know?

17 MR. SMITH: That wasn't an actual, in  
18 Boulevard.

19 MS. GRIESS: Yeah, these aren't images of  
20 Boulevard.

21 DR. PELL: No, no. I'm talking about the wind  
22 machine photos that you showed.

23 MS. GRIESS: Oh, the December 7th in Boulevard?  
24 What happened on December 7th? I'm sorry. I don't  
25 understand your question.

CLEAVES & ASSOCIATES (619) 238-1414

TRANSCRIPT OF PROCEEDINGS 10/7/2010

Page 36

1 DR. PELL: You showed some photographs of a  
2 wind machine that was on fire.

3 MS. GRIESS: Well, there's multiple. They're  
4 just various --

5 MR. SMITH: I think she'll probably have an  
6 attachment that will have all the --

7 DR. PELL: I'm just curious about how those  
8 photos happened to be taken. That's all.

9 MS. GRIESS: Yeah, I'll forward you Donna's  
10 e-mail.

11 DR. PELL: Not an important question by any  
12 means.

13 MS. GRIESS: Okay.

14 MR. COFFEY: Could I ask a question for  
15 clarification? I think it's the same question that was  
16 being asked. Are those from this county or are they  
17 just from some place in the United States? That's the  
18 question you're really asking.

19 DR. PELL: Well, yes. I'd like to know the  
20 identity of the wind machines.

21 MR. COFFEY: Right, and where they really are.

22 MR. SMITH: They're not from -- I don't know.

23 (Reporter interruption in proceedings;  
24 discussion off the record.)

25 DR. PELL: Back on: Julia, I was just

CLEAVES & ASSOCIATES (619) 238-1414

1 wondering if you could provide to us, at your  
2 convenience when you get a chance, some more information  
3 about specifically where those photographs were taken  
4 and when.

5 MS. GRIESS: Okay.

6 DR. PELL: And I wanted to make sure, I wanted  
7 clarification for the record, you do indicate that they  
8 were not from the local area, those wind machine fires?

9 MS. GRIESS: Yeah. They were actually  
10 forwarded to me from Donna, so I'll check with Donna.  
11 She just forgot to show the images, so she asked me.

12 DR. PELL: Thank you.

13 The next party I have is Denis Trafecanty who's  
14 with Protect Our Communities Foundation.

15 Is that correct, Mr. Trafecanty?

16 MR. DENIS TRAFECANTY: Yes, it is. Thank you.  
17 I spoke two nights ago, so I'm not going to repeat what  
18 I said before, so I'm going to add a few comments.

19 First of all, there's -- and I'm not an expert  
20 on this preserve, but there's what's called the  
21 Los Californias Binational Preserve that is located --  
22 it's -- I'll wait until --

23 DR. PELL: I'm sorry.

24 MR. TRAFECANTY: This Las Californias  
25 Binational Preserve, it's like a joint project between

TRANSCRIPT OF PROCEEDINGS 10/7/2010

Page 38

1 the Mexican government and the U.S. government to  
2 establish a preserve for the Peninsular bighorn sheep so  
3 that the herds in Mexico could breed and go back and  
4 forth between the Anza-Borrego Desert State Park and  
5 Mexico, and I don't really think this -- that's an  
6 agreement between two countries whereby the intention is  
7 to preserve an endangered species.

8 DR. PELL: Denis, there's no Border Patrol  
9 fence along that section of the border?

10 MR. TRAFECANTY: No. I mean, when we were in  
11 Jacumba just two days ago, all you had to do was look at  
12 the border fence and it goes up this mountain and it  
13 stops. And there's no fence. It's just a fence doesn't  
14 prevent -- and it was intended for the Mexican  
15 government and the U.S. government to enable the  
16 two herds to commingle and, in fact, there's been sheep,  
17 like you heard two nights ago -- I wasn't at the  
18 Boulevard meeting last night -- that interact with each  
19 other, the herds do.

20 DR. PELL: And those herds go back and forth  
21 across the border beyond the termination of that fence  
22 at the mountain?

23 MR. TRAFECANTY: Yes. And then also -- so  
24 that's the intention. This is an endangered species.  
25 You heard two nights ago that there are a lot of people

CLEAVES & ASSOCIATES (619) 238-1415

**RESPONSE TO 603-4:** Refer to response to comment 108-7 for discussion of Peninsular bighorn sheep populations and migration patterns.

603-4

1 with evidence of bighorn sheep. I don't think this  
2 report really is sufficient from the standpoint of  
3 preservation of herds of sheep which should commingle.

4 I heard just a couple of things and I apologize  
5 for being late, but I do have another job besides this  
6 one, and Donna Tisdale mentioned this two nights ago,  
7 that the blades that had to be taken down in connection  
8 with that disastrous event that took place last winter  
9 are still laying on the ground.

10 I mean, the thing that troubles me so much with  
11 projects like this -- first of all, I don't think this  
12 ESJ is needed at all, this whole line, because you could  
13 either run that power into a Mexican line that was built  
14 years ago and bring it to San Diego that way or, like I  
15 said the other day, and I told you I would do this and I  
16 will do this, we can generate our own power here in  
17 San Diego, and you're going to see all kinds of jobs if  
18 you generate the power here in San Diego versus have a  
19 huge solar plant or a wind farm out there in the  
20 backcountry.

21 DR. PELL: Denis, excuse me for just a moment.  
22 When you say the wind blew the blades from the wind  
23 machine, are still lying on the ground, is that on the  
24 territory of the Campo tribe? Is that correct?

25 MR. TRAFECANTY: Yeah.

**RESPONSE TO 603-5:** Section 2.8.1, which was added to the EIS in response to comments, addresses the potential of a direct interconnection to Mexican transmission lines using the WECC transmission corridor and explains that this alternative was considered but dismissed from detailed analysis. See Section 2.8.1 and the response to comment 101-8 for more information. As is explained in text added to Section 1.5.1.2, distributed energy alternatives, such as small scale solar panel applications in urban settings, are outside the range of reasonable alternatives for this EIS because they do not respond to DOE's purpose and need.

603-5

**RESPONSE TO 603-6:** Regarding fire risks associated with wind turbines, refer to the response to comment 108-11.

TRANSCRIPT OF PROCEEDINGS 10/7/2010

Page 40

1 MR. SMITH: Yes.

2 MR. TRAFECANTY: Just makes the place look  
3 terrible, you know, for a beautiful wilderness area.

4 I wanted to mention some other thing that I  
5 just heard a little bit about, no fire was created on  
6 it. It's true there was no big huge forest fire. You  
7 usually don't get them in December when it's raining and  
8 cold. The humidity is high and the plants aren't ready  
9 to ignite as much, but I will tell you that the fire  
10 that was -- that you may not have -- I'm sure you heard  
11 about in connection with these hearings, but the fire  
12 that occurred in 2007 was an arcing power line due to  
13 wind that was estimated to be -- it could have been  
14 as -- I know the owner of the land, his name. It's the  
15 Tullock family, T-u-l-l-o-c-k, in Santa Ysabel.

16 He took me to where the lines were, and the  
17 arcing of the power lines with the clapping of the winds  
18 started that fire and it's been proven, and SDG&E and  
19 Sempra paid tons of money and the insurance costs are a  
20 lot higher as a result of it and they're trying to get  
21 the ratepayers to pay for their increased premiums. So  
22 fires will develop from things like wind turbines that  
23 explode and power lines that arc and stuff like that.

24 My main point -- I'm going to say a few other  
25 things before I sit down -- I don't think this project

603-6

CLEAVES & ASSOCIATES (619) 238-1415

TRANSCRIPT OF PROCEEDINGS 10/7/2010

Page 41

1 is necessary. I don't think that we should be providing  
2 jobs for other countries when we need jobs for ourselves  
3 here in this country. I think that's very important.

4 I think that the President is not getting the  
5 facts about this. I don't think it's needed at all. I  
6 said that before, 'cause there are smarter energy  
7 solutions. There's a lot of sun here in San Diego and  
8 it's not much different from the amount of sun you  
9 create out in the desert.

10 We still at the Protect Our Communities  
11 Foundation and our attorneys are looking at the  
12 estimates of impact on wildlife, and all these projects  
13 are kind of interrelated. You know, you got the Tule  
14 Wind thing. You got the ESJ. You got the Solar Two  
15 project out in Imperial Valley. Those are all arteries  
16 to something that's not even needed which is called the  
17 proposed Sunrise Powerlink.

18 I question whether the whole Mexico development  
19 is real. I don't know but I question that. I don't  
20 know if the County and the -- I'm sorry. I'm a little  
21 mixed up.

22 DR. PELL: That's all right.

23 MR. TRAFECANTY: -- that the Department of  
24 Energy is really looking into, is that really a real  
25 project down there or is it just, you know, someone's

CLEAVES & ASSOCIATES (619) 238-1414

TRANSCRIPT OF PROCEEDINGS 10/7/2010

Page 42

1 idea of a project? And will it happen? Let me see.

2 I plead with you to give more consideration  
3 than they are with things that occurred in the last  
4 48 hours where there was not much consideration given to  
5 the environmental impacts at Ivanpah, the environmental  
6 impacts at Solar Two, and I'm hoping you won't do the  
7 same, and the environmental impacts at the proposed  
8 Sunrise Powerlink, which I'm sure you know is under  
9 litigation with the BLM and eventually with the Forest  
10 Service and hopefully with the -- and with the CPUC. So  
11 I wouldn't want something like this being developed to  
12 feed into a power line that might never be built, 'cause  
13 there's going to be a lot of fights about that proposed  
14 Sunrise Powerlink. Thank you very much.

15 DR. PELL: Thank you very much, Denis. I  
16 appreciate that.

17 Before we go on to the next speaker, I should  
18 have mentioned this at the outset, but let me mention it  
19 now while I remember to mention it, this is not a  
20 Department of Energy project nor is it -- correct me if  
21 I'm wrong, but nor is it a County of San Diego project.  
22 This is a private sector enterprise, technically known  
23 as a merchant project. The government has no vested  
24 interest in the outcome of the project or whether it's  
25 constructed or whether it's successful. So I just

CLEAVES & ASSOCIATES (619) 238-1415

1 wanted to note that, that we're completely neutral with  
2 regard to the merits or lack of merits of the project  
3 itself.

4 The next speaker is John, is it Riccio? Is  
5 that correct?

6 MR. JOHN RICCIO: I thought I checked that I  
7 was not going to speak.

8 DR. PELL: Oh, I'm sorry. The box above  
9 speaking wasn't checked at all --

10 MR. RICCIO: Okay. I'm sorry.

11 DR. PELL: -- and was handed to me, so I  
12 assumed you wanted to make some remarks.

13 You do not want to make some remarks?

14 MR. RICCIO: No. I'm sorry. Just here to  
15 observe.

16 DR. PELL: We'll mark you as a no.

17 MR. RICCIO: Thank you.

18 DR. PELL: Okay. Is there anybody in the group  
19 that would like to speak? Because we do have some time  
20 and I want to make sure that everybody has a chance to  
21 tell us what you think. This is the last of three  
22 hearings, so if you have some issues you want to share  
23 with us, that's why we're here.

24 MR. COFFEY: I wouldn't mind supplementing my  
25 statement just with a couple of points about --

TRANSCRIPT OF PROCEEDINGS 10/7/2010

Page 44

1 DR. PELL: Sure.

2 MR. COFFEY: -- the amount of offset.

3 DR. PELL: Tell us your name again for the  
4 record.

5 MR. COFFEY: Again, I'm Daniel Coffey for the  
6 record.

7 Something that I didn't raise in my earlier  
8 comments but I'd like to point out is that the build-out  
9 of the project in Mexico is in Mexico because that's  
10 where the wind is, and one of the sort of strange  
11 changes in the way that people have to think about  
12 energy is that you can't go mine it in the ground  
13 anymore. It's going to be adapted to. You have to go  
14 where it is.

15 So there happen to be structures in Mexico,  
16 mountains and that sort of thing, that provide adequate  
17 wind supplies. You can't change that position. So the  
18 notion that you can't build transmission to where the  
19 wind is is just completely contrary to the basic idea of  
20 adapting to renewable energy, wind and solar. It would  
21 be like putting a solar plant on the North Pole. Well,  
22 what's the point? There's not much sun there. So you  
23 have to go where it is.

24 The second point is, is that this project has  
25 been delayed for years. And as part of a column that I

CLEAVES & ASSOCIATES (619) 238-1415

**RESPONSE TO 603-7:** As discussed in Section 1.3, the applicant's stated objective for the proposed transmission line is to transport renewable electrical power, which is "expected to reduce the region's dependence upon conventional fossil fuel fired generation plants, and improve the region's ability to meet future electrical energy requirements," as well as to help California utilities meet the renewable portfolio standards specified in California Executive Order S-14-08, which requires that by the end of 2020, 33% of retail electricity sales be generated from renewable energy sources.

603-7

Volume 3  
Comments and Responses

---

TRANSCRIPT OF PROCEEDINGS 10/7/2010

Page 45

1 wrote, I decided I would do a calculation of how much  
2 carbon is put in the atmosphere every month of delay if  
3 you were to assume this were built out, and it turns out  
4 to be a gigantic number. Now, my estimates were  
5 something in the neighborhood of a billion pounds of CO2  
6 a month. That --

7 DR. PELL: From what?

8 MR. COFFEY: From not building this project.

9 In other words, to take the power from this project and  
10 replace it with something based on a carbon-based coal  
11 or whatever you want to call it, you would produce  
12 roughly a billion pounds a month.

603-7

13 DR. PELL: Now, is that assuming full build-out  
14 or is that just assuming Phase 1?

15 MR. COFFEY: That's assuming full build-out.

16 DR. PELL: For the full 1,250?

17 MR. COFFEY: Right. But the point is, is that  
18 if you delay it a month or three or two years now,  
19 that's a huge amount of carbon that got put into the  
20 atmosphere that didn't need to.

21 And I've called in other meetings upon people  
22 who are opposing projects like this to justify their  
23 opposition based on the balance between what they're not  
24 putting in the atmosphere -- or what they are putting in  
25 the atmosphere by delaying these projects, because if

CLEAVES & ASSOCIATES (619) 238-1415

TRANSCRIPT OF PROCEEDINGS 10/7/2010

Page 46

1 you're really just going to get there but you're going  
2 to get there five years late because everybody wants to  
3 complain about it, that's a huge environmental cost that  
4 isn't being figured in, and it's due to people  
5 objecting.

6 If you're really never going to build it,  
7 that's a different matter altogether, but the reality is  
8 as climate change tells us, we have to build these  
9 things and get out of the carbon business. So it's not  
10 like we have an alternative path or a choice.

11 And the other part of it is we don't have that  
12 many choices when it comes to renewable energy. There's  
13 geothermal, solar, wind. There just aren't that many.  
14 I mean, there's nuclear. There's a couple of others,  
15 but the basic idea is there isn't a panoply of choices.  
16 And so you have to build where it is, you have to build  
17 what you've got, and you have to do it soon because time  
18 is really not on our side. Thank you.

19 DR. PELL: Thank you. Actually, just as a  
20 matter of observation, as you know, the administration  
21 does support renewables, and one of the major reasons it  
22 does is simply because of the carbon issue with regard  
23 to global climate change.

24 And as was just noted, it is a fact that the  
25 greatest problem with renewables is the energy source is

603-7

CLEAVES & ASSOCIATES (619) 238-1415

1 not necessarily where the people are that want and need  
2 the energy; and access between the source and the market  
3 for the energy, the transmission linkage, is one of the  
4 great hurdles to overcome in order to become more  
5 dependent on renewable energy, and that's an observation  
6 that pertains to the entire country, not specifically to  
7 the Southwest, and it's an issue that arises on almost  
8 every renewable energy project that you will read about  
9 or hear about in the news. It's a continually recurring  
10 issue, and I regret to say there are no easy solutions.  
11 If there were, hopefully we would know about them by  
12 now.

13 Yes, sir.

14 MR. THOMPSON: My name is Robert Thompson. I'm  
15 a developer, wind energy developer, and those statements  
16 would be true if it was true that that is the only place  
17 there is wind; but I am involved in a development now in  
18 the southeastern or eastern county of San Diego, and you  
19 know, we're ready, willing, and able to provide power  
20 and we're fairly close to a substation, a 230-kilovolt  
21 substation.

22 So that if SDG&E and Sempra Energy were really  
23 interested, they would be cooperating more fully with  
24 the local developers rather than chasing down these, you  
25 know, out-of-the-country resources that don't have any

**RESPONSE TO 603-8:** Potential socioeconomic impacts associated with short-term jobs from the ESJ U.S. Transmission Line project are addressed in EIS Section 3.13. Comments pertaining to the merits of the project with respect to labor policy, federal energy policy, and California utility regulations are outside the scope of the NEPA process. DOE will consider these comments as well as all other comments received before making a final determination on the permit application.

603-8

TRANSCRIPT OF PROCEEDINGS 10/7/2010

Page 48

1 of the hurdles that local developers have to go through  
2 and including we would be providing local jobs and  
3 dealing with local businesses. Thank you.

4 DR. PELL: Let me just ask you before you sit  
5 down, you say you're a local wind developer.

6 MR. THOMPSON: Yes.

7 DR. PELL: There are a number of independently  
8 developed wind projects either under construction or  
9 proposed in the country. In fact, Iberdrola, if I'm not  
10 mistaken, is a Spanish company.

11 What's preventing you from going forward with  
12 the wind project that you're familiar with?

13 MR. THOMPSON: Well, it would certainly help if  
14 we had some power purchase agreements available from  
15 SDG&E. And in order to even look at those, we have to  
16 put up \$250,000 and simply to be told that there's  
17 nothing available.

18 In the meantime, suddenly there's a great  
19 demand for power from south of the border. And I  
20 realize they must have massive investments down there  
21 and they're only trying to support their massive  
22 investments, but, by the same token, we are in  
23 Southern California and we are trying to do business in  
24 Southern California.

25 DR. PELL: Tell me about that \$250,000.

CLEAVES & ASSOCIATES (619) 238-1415

603-8

1 That would be paid to whom?  
2 MR. THOMPSON: The California Independent  
3 System Operators.  
4 DR. PELL: Cal ISO?  
5 MR. BROWN: That's for generation  
6 interconnection agreements.  
7 MR. THOMPSON: Yeah, and that's just your  
8 application fee, period.  
9 MR. SMITH: Upfront.  
10 DR. PELL: Thank you.  
11 Who else would like to speak, anybody? Sir?  
12 MR. TRAFECANTY: Denis Trafecanty again. I  
13 just want to comment that -- I want to repeat something  
14 I said already. San Diego Smart Energy Plan, 2020 Plan,  
15 doesn't require additional transmission lines at  
16 \$2 billion or another billion dollars of these artery  
17 lines which is ESJ, Tule Wind, Stirling Solar, and we  
18 will have sufficient energy, just like I do on my roof.  
19 I have energy and I contribute energy to the grid  
20 without getting paid for it.  
21 And there is a trend. I don't know if you  
22 listen to the radio. I don't watch TV much, but I sure  
23 hear a lot of ads and there's a lot of companies out  
24 there that are fighting the utilities and saying to the  
25 consumers by advertising that "We can put solar on your

603-8

603-9

**RESPONSE TO 603-9:** As is explained in text added to Section 1.5.1.2, distributed energy alternatives, such as small scale solar panel applications in urban settings, small-scale wind turbines, and other types of electrical generation, are outside the range of reasonable alternatives because they do not respond to DOE's purpose and need.

TRANSCRIPT OF PROCEEDINGS 10/7/2010

Page 50

1 roof for nothing or you can buy it yourself and get a  
2 30 percent credit," and so I did that two years ago and  
3 I contribute to the grid with my simple 3.6-kV system.

4 DR. PELL: I'm glad to hear you have a  
5 successful installation. That's encouraging.

6 MR. TRAFECANTY: So I'm going to send you that  
7 Smart Energy Plan. It doesn't have anything about wind  
8 in it. You can't put a big wind turbine in the city  
9 obviously. There's smaller wind turbines. And  
10 utilization of a wind turbine isn't very much, just like  
11 with the utilization of even PV, photovoltaic. It's  
12 probably half a day, but then, of course, I take care of  
13 that by having a storage backup.

14 DR. PELL: What kind of storage do you use?

15 MR. TRAFECANTY: I have 18 batteries and I  
16 don't have to use them at night because my system is  
17 tied to the grid to maintain the rebate, but if the grid  
18 went down I would have lights. It would supply me  
19 lights all evening long, and then the next day the  
20 system would power up the batteries.

21 DR. PELL: Routinely when the solar cells are  
22 not receiving enough light to generate power, you're  
23 taking power off the grid; is that correct?

24 MR. TRAFECANTY: Yeah, but my net is a  
25 contribution to the grid. I could show you our annual

603-9

CLEAVES & ASSOCIATES (619) 238-1415

1 statements. We get a bill once a year for \$56, which is  
2 I think the transmission hookup cost, \$5 times 12  
3 months, something like that or something, and there's  
4 more and more people doing it.

5 And I just want to state also that those  
6 figures, for guys like me and my wife, they don't even  
7 get counted in the amount of renewable generation that's  
8 being generated, 'cause you have to be a bigger system  
9 for your numbers to be reflected anywhere.

10 It's coming. The technology's there. It  
11 doesn't require massive solar or wind in the desert. I  
12 mean, we were talking about geothermal 25 years ago when  
13 they built the Southwest Powerlink, that they were going  
14 to fill it up with that energy and they got like  
15 60 megawatts on it, on that line. It isn't much. And,  
16 yeah, they're saying they're going to do half the  
17 Salton Sea and all these projects are going on.

18 Heck, up in the Sierras they were going to put  
19 wind energy all across the dry Owens Lake, DWP was, and  
20 they finally made an announcement the other day or  
21 couple months ago that "Well, it's too muddy out there.  
22 We can't do it, so we might build it on the side of the  
23 lake." Some of these projects, I don't even think  
24 they're giving much thought to how they're going to  
25 develop them. That's a big project, DWP, and they had

603-9

TRANSCRIPT OF PROCEEDINGS 10/7/2010

Page 52

1 to back off what they were saying to the people up in  
2 Bishop.

3 DR. PELL: DWP stands for?

4 MR. TRAFECANTY: Department of Water and Power.

5 DR. PELL: Oh, okay.

6 MR. TRAFECANTY: It's a municipal utility in  
7 the L.A. area.

8 So I contend and I'm going to repeat it because  
9 this gentleman back here, I know he's very much in favor  
10 of the Sunrise Powerlink -- I read his articles -- and  
11 all I'm telling you is that we can do without all these  
12 projects and put, just like Kyocera does -- you should  
13 see the Kyocera facility. They've got it on their  
14 parking lot rooftops, shade for the employees' cars on  
15 the buildings. Qualcomm's doing it and UCSD's doing it  
16 and San Diego State University's doing it, and  
17 everybody's going to be doing it. That's where the  
18 technology is.

19 DR. PELL: We're adding solar cells to the  
20 White House.

21 MR. TRAFECANTY: Yeah, and that was an  
22 embarrassment for the White House because initially they  
23 weren't even going to do it, and they got embarrassed so  
24 badly by it that they changed their minds. I read those  
25 articles. So, yeah, we're all going to have to change

603-9

TRANSCRIPT OF PROCEEDINGS 10/7/2010

Page 53

1 our minds on this.

2 You know, in Japan people put -- this is a  
3 funny story. People put solar panels on their rooftops  
4 that aren't even hooked up to anything because it's a  
5 status symbol to have panels. Some people that can't  
6 afford to put the whole thing together, they still put  
7 panels up to -- and that's what -- it's socially more  
8 acceptable and it's going to be more and more  
9 acceptable.

10 And I think condo associations and developers  
11 are going to be given a lot of heat. The County should  
12 do that. They shouldn't let them build power, you know,  
13 big huge houses or buildings without putting your own  
14 solar on the roof. It's something that's real simple.  
15 I think it's going to happen.

16 And this is like the Edsel, this proposed  
17 Sunrise Powerlink. It's something that is going to make  
18 a lot of money for SDG&E, 'cause they get paid 11 or  
19 12 percent on the project, but it's really not what we  
20 need. The rules need to change at the CPUC.

21 DR. PELL: Okay. Thank you so much.

22 Did you want to speak?

23 MR. DAVID EDICK: I would like to.

24 DR. PELL: Please.

25 MR. EDICK: My name is David Edick. That's

603-9

CLEAVES & ASSOCIATES (619) 238-1415

TRANSCRIPT OF PROCEEDINGS 10/7/2010

Page 54

1 E-d-i-c-k. I have no connection with this project other  
2 than the fact that I live in the county. I do have a  
3 considerable amount of energy background  
4 internationally. I study the issue and advise groups on  
5 it quite often.

6 From the specifics of this hearing, I think the  
7 research on the environmental side is significant. I  
8 would suggest following through with I think it was the  
9 Sierra Club representative -- no, it was the Audubon  
10 Society representative about improved data sharing on  
11 methodology. I think that's worthwhile.

12 Going outside the scope of the hearing as far  
13 as the issue of renewable energy, the State of  
14 California has decided that there's a mandate for  
15 renewable energy as a percentage of the total demand in  
16 the state. We're going to supply a certain percentage  
17 from renewable sources.

18 In effect, they are telling us as consumers and  
19 producers in a way how we're going to produce energy,  
20 how we're going to supply ourselves, and so we've got  
21 this strange race for wind, for example, projects that  
22 are not really thought through. We have this  
23 pie-in-the-sky chase for solar and a technology that is  
24 still 20 or 30 years away in terms of being  
25 cost-effective on a grand scale, on a statewide scale.

CLEAVES & ASSOCIATES (619) 238-1415

**RESPONSE TO 603-10:** Thank you for your comments. As discussed in Section 1.3, the applicant's stated objective for the proposed transmission line is to transport renewable electrical power, which is "expected to reduce the region's dependence upon conventional fossil fuel fired generation plants, and improve the region's ability to meet future electrical energy requirements," as well as to help California utilities meet the renewable portfolio standards specified in California Executive Order S-14-08.

Page 55

1 I support the development of the technology, but it's  
2 got to be paid for. Somebody's got to pay for the  
3 subsidies.

4 I think that the connection to the Mexican  
5 project is a good one. If California has a mandate to  
6 supply renewable energy to its consumers, so be it.  
7 Okay. Where are we going to get it? It's a big  
8 project.

603-10

9 I do appreciate the detail that goes into this  
10 hearing and to the environmental study. I got to tell  
11 you, around the world it's not done like this.  
12 Everybody gets a chance to speak their mind, and I think  
13 that's pretty cool. But we've made a decision at the  
14 State level that renewable energy, we've got to do a  
15 certain percentage of it and I think that that was, to  
16 be honest, an ill-considered decision because the costs  
17 of that decision were not adequately weighed.

18 I support the technology. I support the  
19 development. I also support careful consideration of  
20 the costs involved as we travel down a very interesting  
21 road here. Good luck to us all. Thank you.

22 DR. PELL: Thank you.

23 Kevin?

24 MR. SMITH: And an interesting add to actually  
25 both of their comments. He gets a bill of \$56 a year

CLEAVES & ASSOCIATES (619) 238-1415

TRANSCRIPT OF PROCEEDINGS 10/7/2010

Page 36

1 for the transmission hookup, and I congratulate you, by  
2 the way. I think you're doing a stellar job. That  
3 won't be available anymore since we're going to spend  
4 \$588 per customer, per customer. That means every one  
5 of SDG&E's customers is spending \$588 to do the  
6 Powerlink, the Sunrise Powerlink alone. That's just  
7 getting scary. That's a lot of money for each customer  
8 to take on especially when they're supposed to get a  
9 bill of \$56 for a hookup charge. That will go away.

10 If we are really serious about renewables, why  
11 aren't we buying \$588 worth of panels that dropped to  
12 under a dollar a watt now? The numbers have come down  
13 tremendously on solar.

14 The interconnects for wind are insultingly  
15 cruel when you want to ask how much power is available  
16 on that grid. It's a simple question. They already  
17 know the answer, but they want a quarter of a million  
18 dollars to tell you, to study the interconnect. It's  
19 ridiculous. It's just to keep anybody out, anybody out.

20 There's one part in this where you talk about,  
21 on your EIR, just to get back to the facts, on  
22 page 4.9-7, you talk about 13.3 miles running west. I  
23 assume that's the line that runs parallel to the border  
24 under the south link. I thought that was not part of  
25 this EIR.

TRANSCRIPT OF PROCEEDINGS 10/7/2010

Page 57

1 MR. ALBERTO ABREU: What page is that?

2 MR. SMITH: 14.9 -- 4.9-7, in Chapter 4.

3 DR. PELL: I just want to -- Jane, that was

4 Alberto Abreu.

5 MR. ABREU: Sorry.

6 MR. SMITH: Doesn't this EIR end at the ECO

7 Substation?

8 MR. BROWN: Give me a page number, Kevin,

9 please, on the bottom.

10 MR. SMITH: It's Chapter 4. It's 4.9-7.

11 DR. PELL: What's the page number on the bottom

12 of the page?

13 MR. SMITH: You know what? Mine's blank. This

14 is an August '09. So you dated them --

15 MR. BROWN: That's a copy you got.

16 MR. SMITH: So basically -- well, it's in the

17 description of the 138-kV line, so if you could find

18 that in the Sunrise Powerlink loop-in.

19 MS. MEGAN SCHWARTZ: Are you referring to a

20 Sunrise Powerlink document?

21 MR. SMITH: Yeah.

22 MS. SCHWARTZ: That's not this document.

23 MR. SMITH: That's not?

24 MS. SCHWARTZ: No. That's a different EIR.

25 MR. SMITH: Well, I'm not reading that

CLEAVES & ASSOCIATES (619) 238-1415

TRANSCRIPT OF PROCEEDINGS 10/7/2010

Page 58

1 document. I know but --

2 DR. PELL: Maybe we should consider that after  
3 the formal part of the hearing.

4 MR. SMITH: There you go. I thought we were  
5 just in the open session, so ....

6 DR. PELL: Anybody else before we adjourn?

7 MR. COFFEY: Could I just say one last thing?

8 DR. PELL: Sure.

9 MR. COFFEY: There is a lot of discussion that  
10 goes on with that much actual math, and my background's  
11 chemical engineering so I've spent a lot of time doing  
12 math calculations to tell myself the answer to questions  
13 that I didn't necessarily know the answer to when I  
14 started.

15 And I've read a lot of what other people do,  
16 and there's a guy at Cal Tech who's done an estimate of  
17 how much energy would we need to produce by way of  
18 renewable and noncarbon-based systems, and he calls it  
19 something in the neighborhood of 10 terawatts worldwide.

20 So in this country we utilize something between  
21 100, roughly average about 100 tera BTU -- I'm sorry --  
22 10 to the 16th BTU and it will require us to build every  
23 conceivable kind of renewable energy system known to man  
24 and a huge amount of it in order to meet the current  
25 state of the energy demands that we have in this country

CLEAVES & ASSOCIATES (619) 238-1414

TRANSCRIPT OF PROCEEDINGS 10/7/2010

Page 59

1 and in the world. And that's not even counting growth.  
2 So the notion that we can just say, "Oh, well,  
3 we like this system but not that system or we want to  
4 cherry-pick something," that is gone. That whole  
5 concept is gone, and it grew up around a time when you  
6 could burn coal and get a lot of energy or burn oil and  
7 get a lot of energy. Now you have highly diffuse energy  
8 systems that we're tapping into and we're going to need  
9 a huge number of them in order to sustain a quality of  
10 life, be able to pump water, to do all the kinds of  
11 things that we just take for granted at the moment.  
12 And it will require us to cut back 80 percent.  
13 We'll have to produce 20 percent of our energy from  
14 carbon-based systems and 80 percent from other systems  
15 including renewable, and right now we only produce  
16 2 percent for renewable.  
17 So the notion that, you know, Mr. Trafecanty  
18 can say, "Oh, we don't need this," we need it all,  
19 unfortunately. And I think it does no good service to  
20 suggest or to even go along with the idea that we don't  
21 need it all, because it's not energy dense. It's going  
22 to require a lot of infrastructure. We're going to have  
23 to build it while the cost is cheap and work hard  
24 together to get this thing done, because just argument  
25 is no longer the answer. So thank you. That's my truly

CLEAVES & ASSOCIATES (619) 238-1415

TRANSCRIPT OF PROCEEDINGS 10/7/2010

Page 60

1 last comment.

2 DR. PELL: Thank you. You'll notice that DOE  
3 does support the wide spectrum of technologies.

4 Is that it? Nobody else? Going once, going  
5 twice, last chance.

6 I want to thank you all for coming out tonight.  
7 I think we've had a very rewarding and valuable evening  
8 and really appreciate being able to meet you in person.  
9 On that note, let the record show the meeting is  
10 adjourned at 6:31 p.m.

11 (The proceedings were concluded at 6:31 p.m.)
