Automotive Li-Ion Battery Development is Driving Down Battery Cost, Improving Performance, Enabling Grid Applications

A123 Example: Government-Private Partnership Through Cycle of Innovation and Commercialization

BES Research in Nanoscale Olivines 2000 -2002

SBIR Grant, 2002
Commercialization, 2005

BUSINESS
Drilling for nanotech gold

One US nanotech technology has gone from lab to market in the product of such overnight success stories reports Colin MacNeale reports.

A123 SYSTEMS ML1

- 3.3V, 2.3 Ah (2 Wh) cell of 26650 format
- 43000 Wh/kg peak power
- 11000 Wh/kg specific energy = 150Ah pulse current
- 2000 cycles @ 100% depth of discharge
- 4300,000 hybrid pulse power cycles
- Extremely low impedance growth

R&D 100

BAE HybriDrive System for 2008 Daimler Chrysler Orion VI Bus

USABC Program, 2006
Multiple Vehicles, 2007
ARRA Manufact., 2009

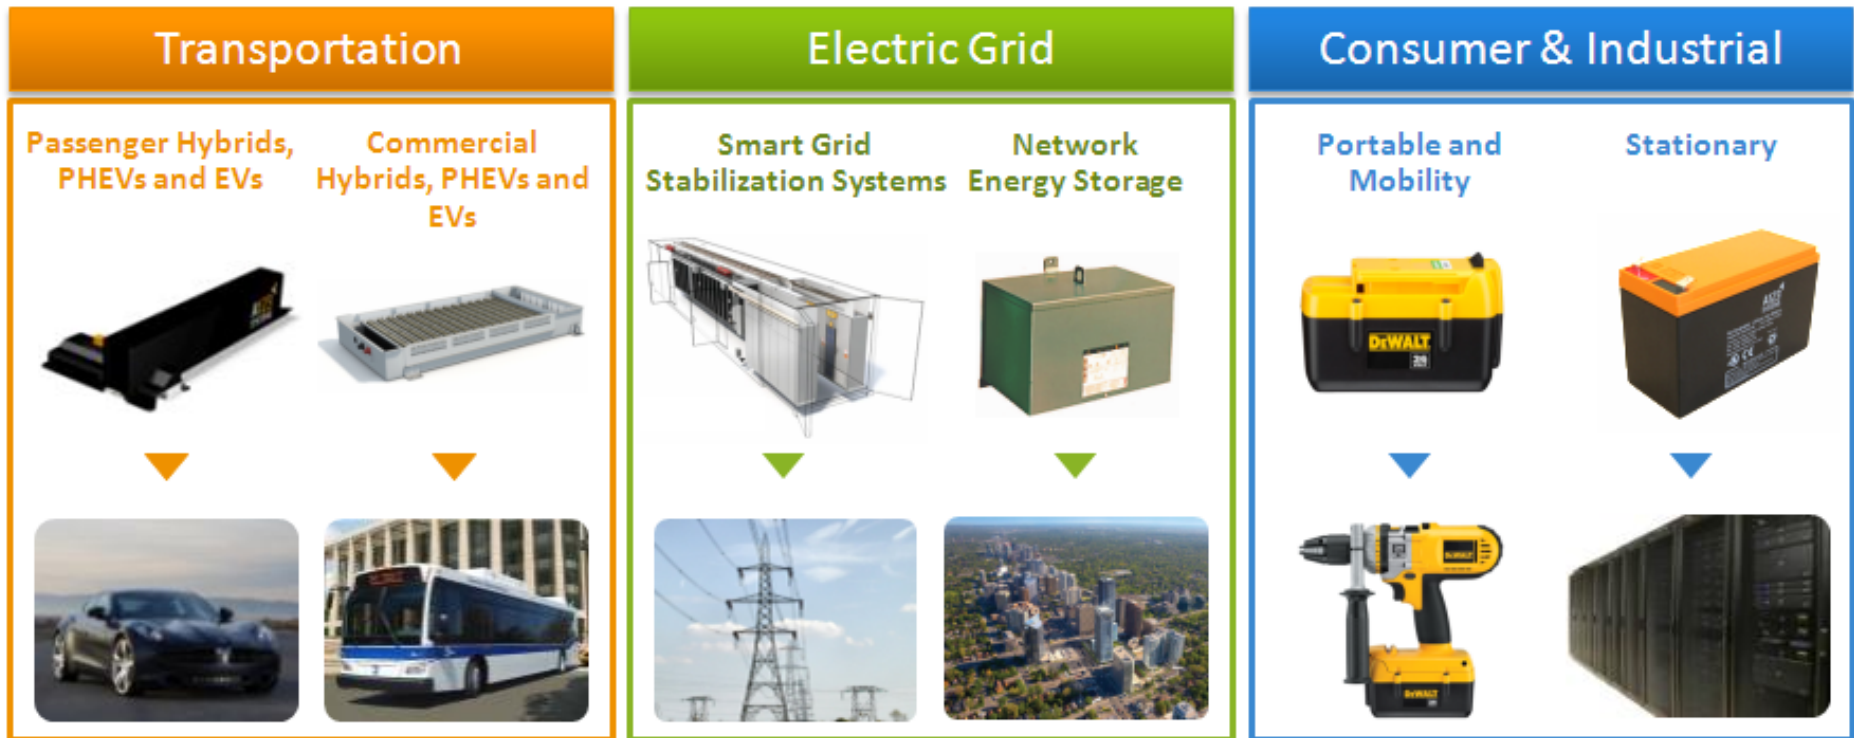

A123 SYSTEMS

A123's Nanophosphate™ Technology Is Used In Three Core Markets

New Classes of Products Have Been Enabled by Advanced Energy Storage

- + Fuel economy
- + Reduced emissions
- + Energy independence
- + Lighter-weight components
- + Fuel efficiency

- + Increase grid reliability
- + Enable Wind and Solar
- + Increase plant efficiency/utilization

- + Improve performance
- + Reduce emissions
- + Reduce toxic battery chemicals

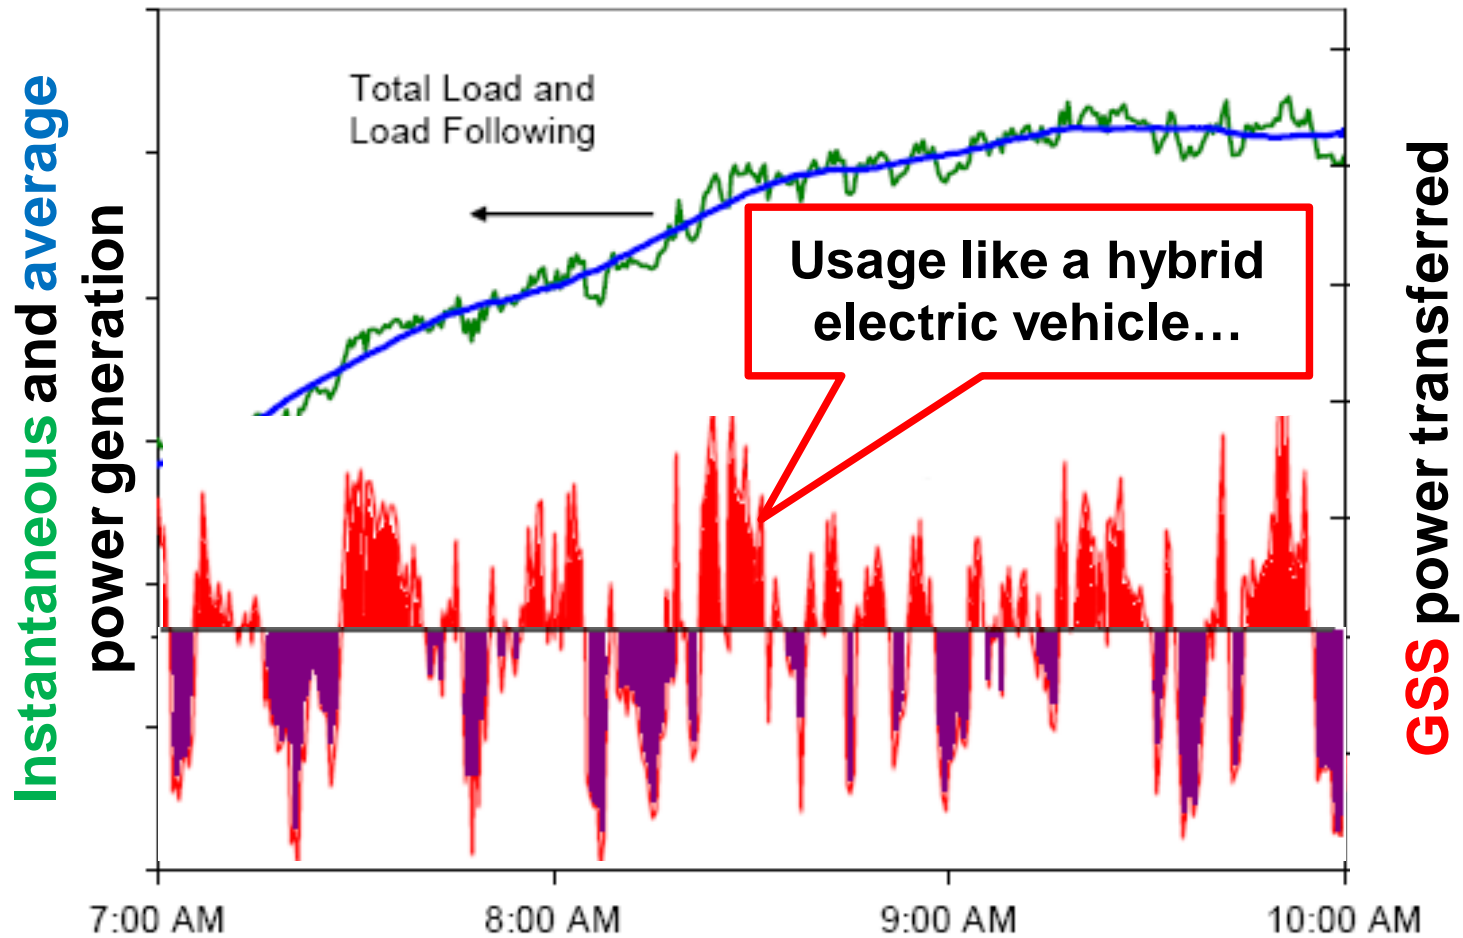

Drivers

Eight A123 Systems SGSSs™ units providing 16 MW installed on the grid in Chile, performing “spinning reserve” grid stabilization services

Frequency Regulation Application: “Hybridizing” Power Plants With Li-Ion Batteries

ISO Regulation Example

The Problem:

- Thermal plants providing regulation operate less efficiently, have increased O&M costs and worse emissions

The Solution:

- **20MW Smart Grid Storage System (SGSS)** in U.S. ISO
- Even with historic low natural gas prices, achieve 3 year payback
- **Improve emissions by >50%**

Wind Firming Example: Tehachapi Storage Project

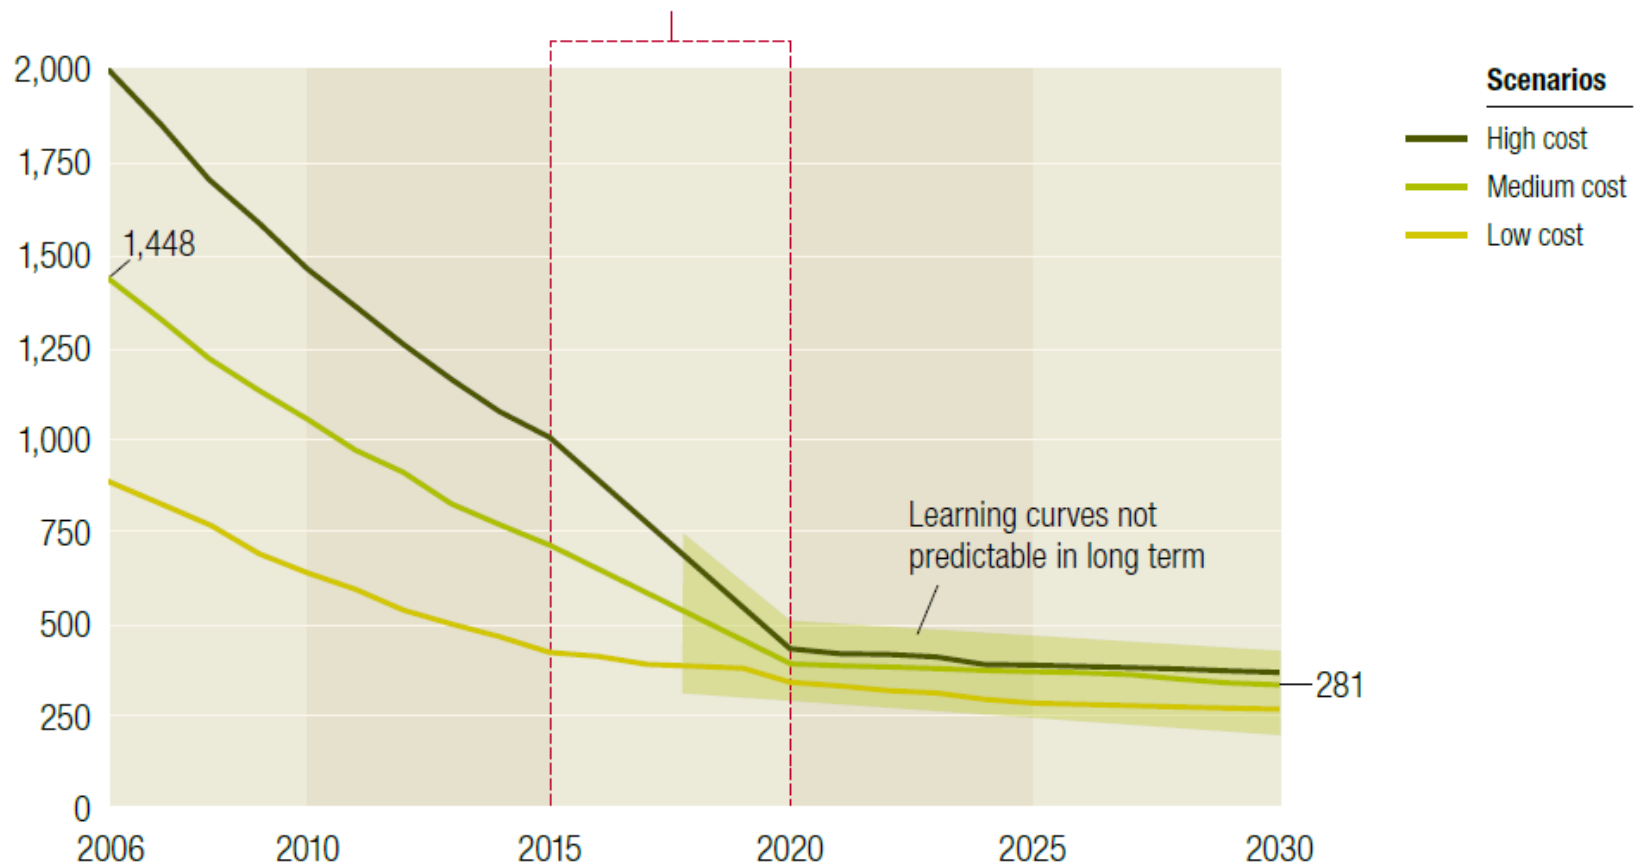

- Customer: Southern California Edison
- Location: Tehachapi Windfarm
 - California's largest wind resource
 - Wind development potential driving grid infrastructure upgrades and expansion
 - 2nd largest wind park in the world
 - 660MW installed / ~5,000 turbines
- System
 - 8MW – 4 hour (32MW-hour) GBS system
 - World's largest Li-ion battery system when complete
 - Dynamic 4-Quadrant PCS/Grid Interface
 - A123 Prismatic Cells
 - Installation / Operation 2012
 - 13 Targeted Operational Uses – Individually and Stacked

Recent Studies Predict Li-ion Battery Pack Costs Will Reach \$330-\$400/kWh at Scale

Lithium-ion battery cost assumptions,
\$ per kilowatt hour (kWh), pack level

Projected breakthrough for materials and/or productivity, in addition to improvements in battery's state-of-charge window¹

¹State-of-charge window, is the available capacity in a battery relative to its capacity when full. Conservative applications work within a 65% window, whereas more aggressive applications use 80%; over the next 5 to 10 years, most applications will likely migrate to the higher value.

(McKinsey, 2010)

Future: Pumped Hydroelectric Is Lowest Cost Storage (~\$100/kWh), can this be done with electrochemical storage?

- 1872 MW output (21.5 GW total in U.S.)
- 15,000 MWh stored energy
- 2.5 x 1 mile, 842 acres
- Elevated 400 ft above Lake Michigan

The End
