

Overview Nevada National Security Site

Established on December 18, 1950, the Nevada National Security Site (NNSS) totals approximately 1,360 square miles. The NNSS provides a unique setting for defense-related and national security activities, such as ensuring the reliability of the nation's nuclear stockpile. In addition, extensive environmental work has been ongoing for decades to address the effects of historic nuclear activities.

≈1,300
employees at the NNSS on any given day
