

### Chevrolet Malibu HEV Accelerated Testing – June 2013

Four model year 2013 Chevrolet Malibu hybrid electric vehicles (HEVs) entered Accelerated testing during November 2012 in a fleet in Arizona. Each Malibu will be operated for 195,000 miles, at which point their traction batteries will be tested before they are retired (their traction batteries are also tested when new). One-page vehicle maintenance logs are posted on nearby www pages. This information includes the date and mileage for all maintenance and repairs performed on the vehicles. The four Malibu PHEVs have been driven a total of 142,281 miles and the cumulative average fuel economy is 30.6 mpg. Note that initial mileage accumulation was slow due to baseline performance and battery testing.
