

# Workplace Lessons Learned through the Nation's Largest PEV Charging Projects

**DOE Workplace Charging Challenge Summit  
Alexandria, VA**

**John Smart  
11-18-2014**

**INL/MIS-14-33698**

[www.inl.gov](http://www.inl.gov)

## ***Idaho National Laboratory***

- U.S. Department of Energy (DOE) federal laboratory
- 890 square mile site with 4,000 staff
- Support DOE's strategic goal
  - Increase U.S. energy security and reduce the nation's dependence on foreign oil
- Multi-program DOE laboratory
  - Nuclear Energy
  - Fossil, Biomass, Wind, Geothermal and Hydropower Energy
  - Advanced Vehicles and Batteries
  - Homeland Security and Cyber Security

## INL was a primary partner in two national electric vehicle charging infrastructure demonstrations

### The EV Project

- Purpose is to build mature EV charging infrastructure in 17 US regions and study:
- Infrastructure deployment process
- Customer driving and charging behavior
- Impact on electric grid
- 12,000+ AC level 2 charging units, 100+ DC fast chargers
- 8,000+ electric drive vehicles
- INL data collection Jan 2011 – Dec 2013
- Project partners:

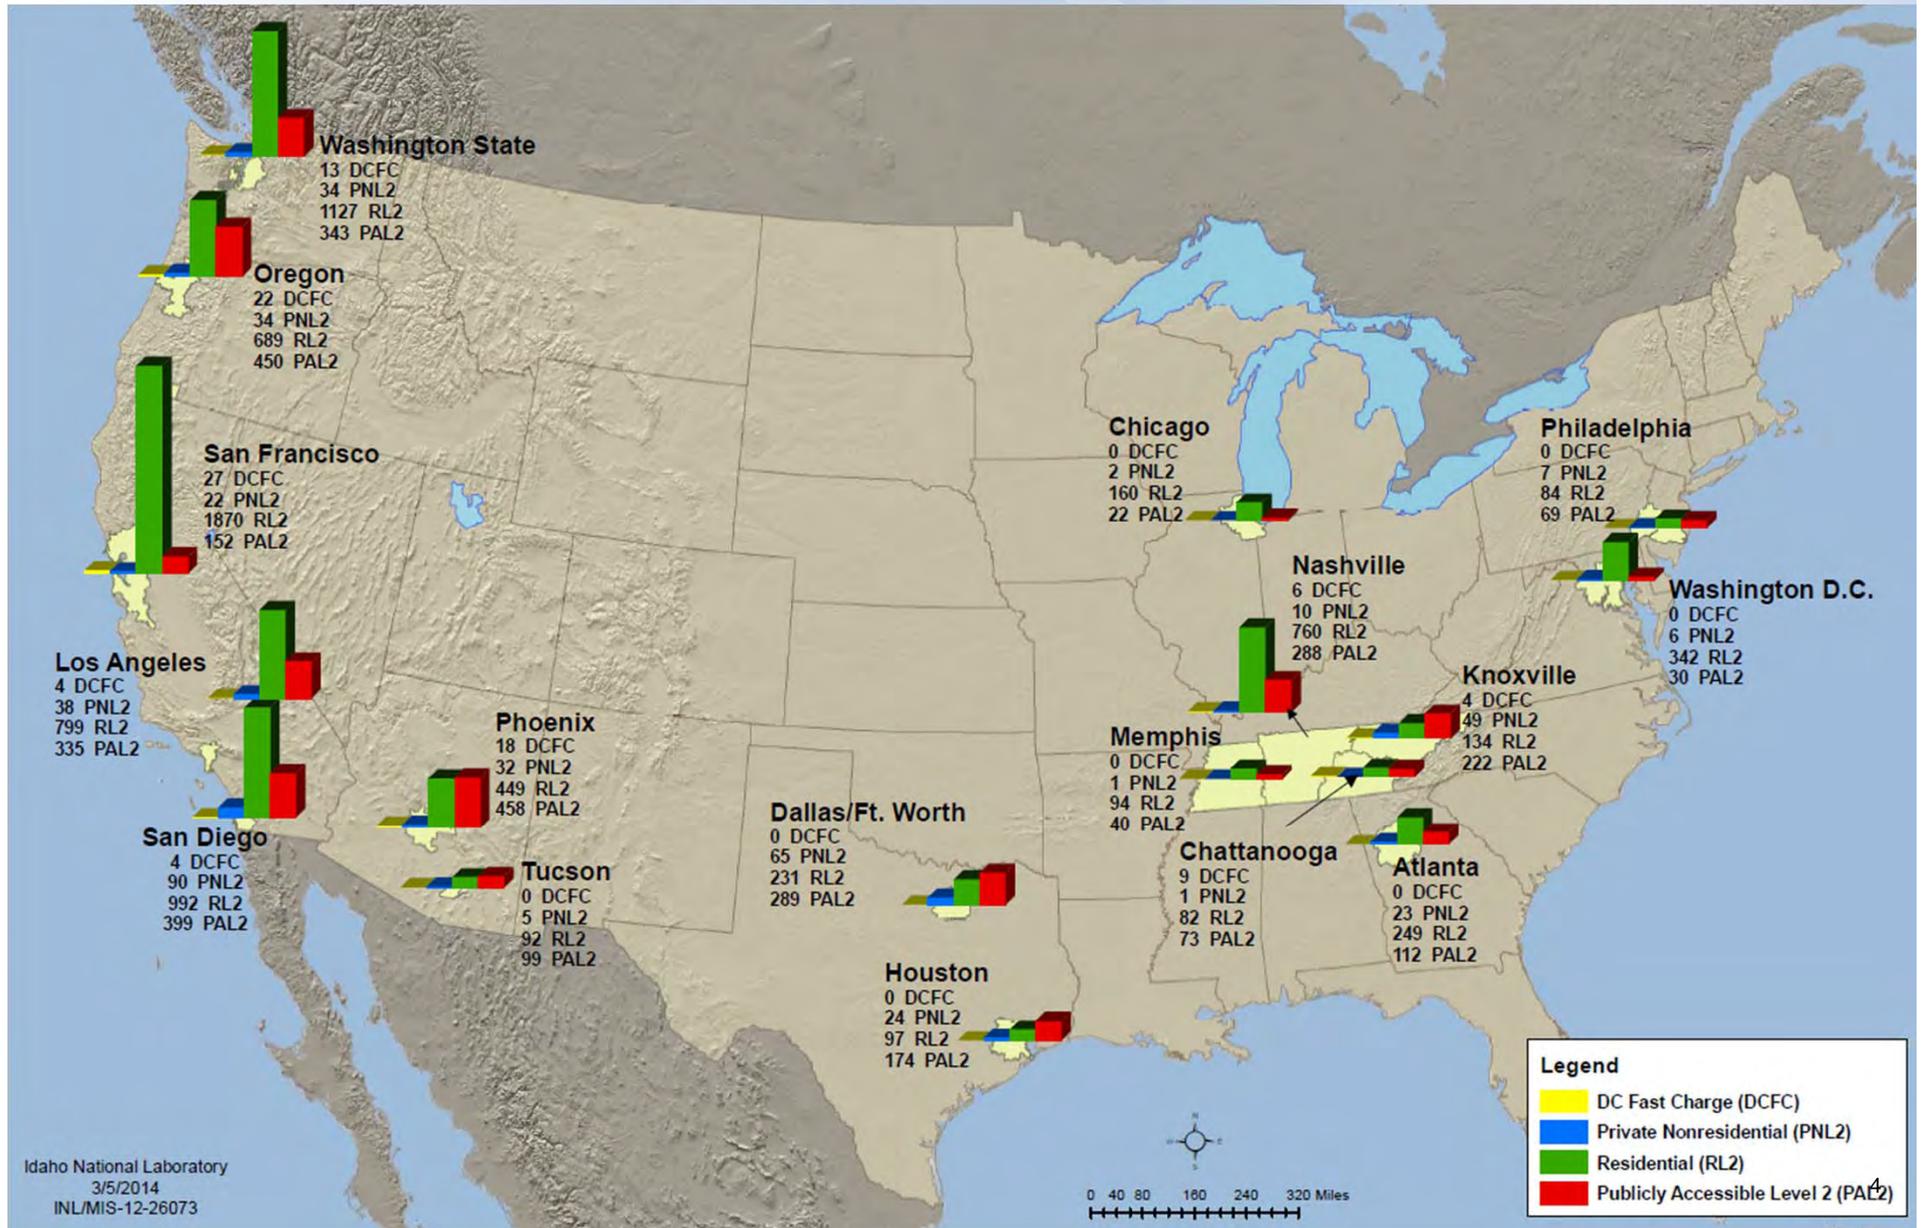

The logo for blink, consisting of the word "blink" in a bold, black, lowercase sans-serif font.

### ChargePoint America

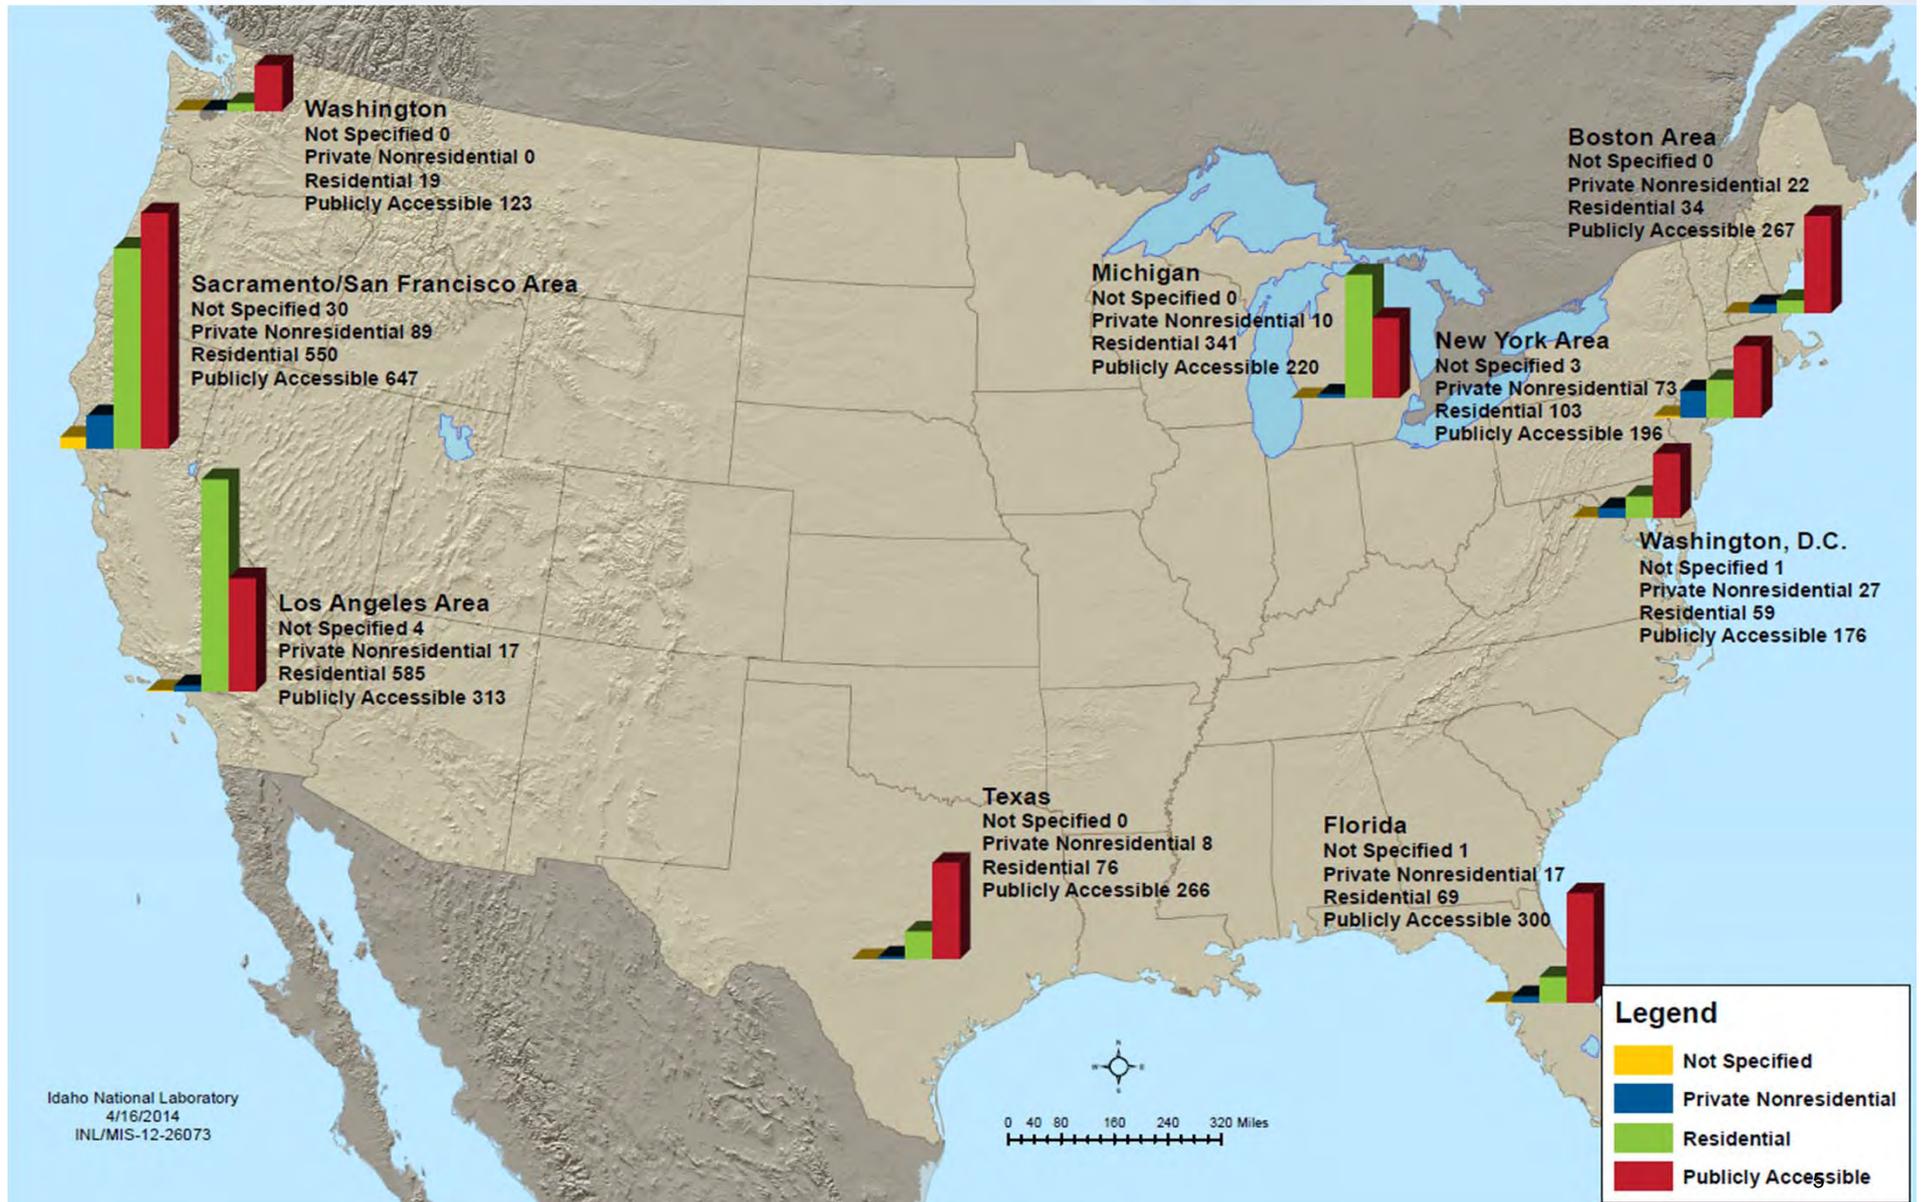

- Deploy 4,700+ residential and public AC level 2 charging units in 11 US regions
- Study customer usage of residential and public infrastructure
- INL data collection May 2011 – Dec 2013

The ChargePoint logo, featuring the word "chargepoint" in a lowercase, sans-serif font. The "charge" part is orange and the "point" part is blue. A registered trademark symbol (®) is located to the right of the word.

# Infrastructure Deployment in The EV Project through December 2013

# Infrastructure Deployment in ChargePoint America through December 2013

## ***Workplace Charging Analysis***

- 250 work sites identified with workplace charging available
- 600+ Nissan Leafs and 100+ Chevrolet Volts in The EV Project who park at these sites
- 2012 – 2013

# Workplace Charging Analysis

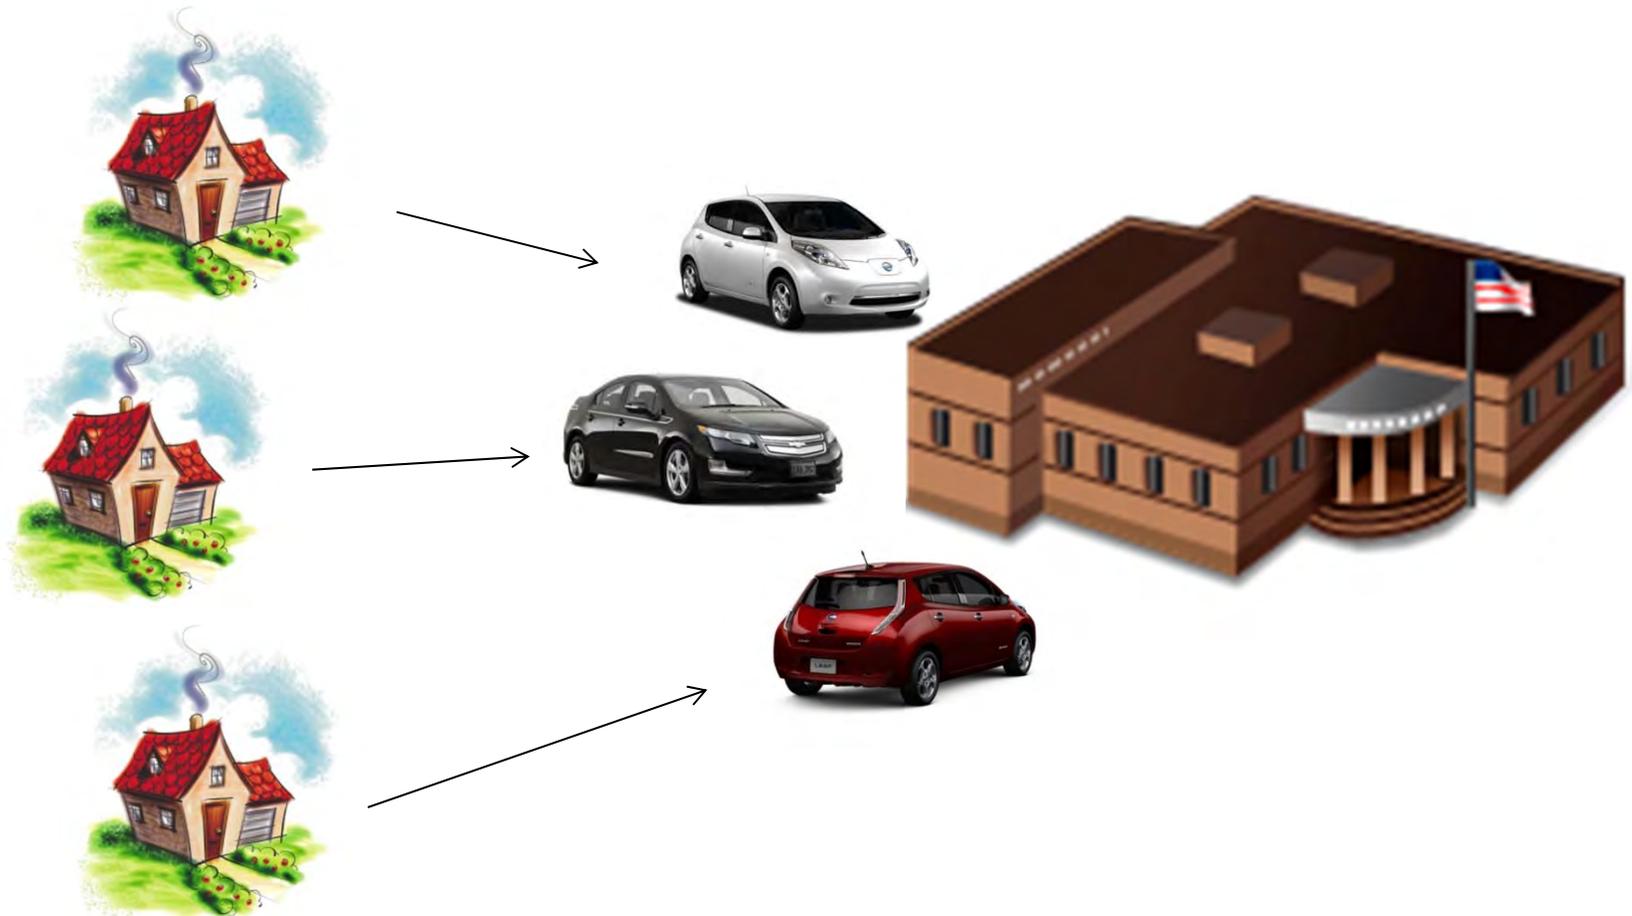

3 ways to look at data

1. Charging station usage at a work site

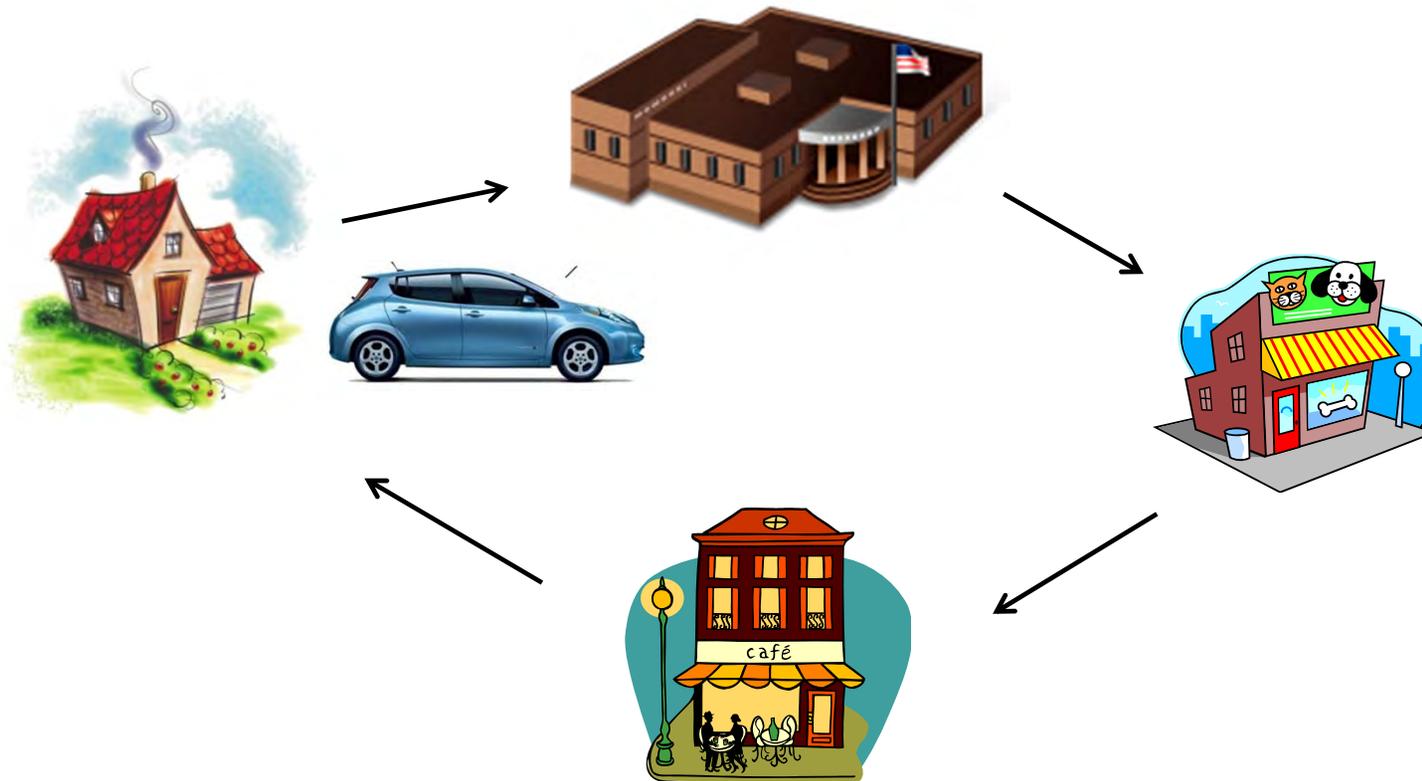

# Workplace Charging Analysis

## 2. Parking and charging at a work site by vehicles reporting data

# Workplace Charging Analysis

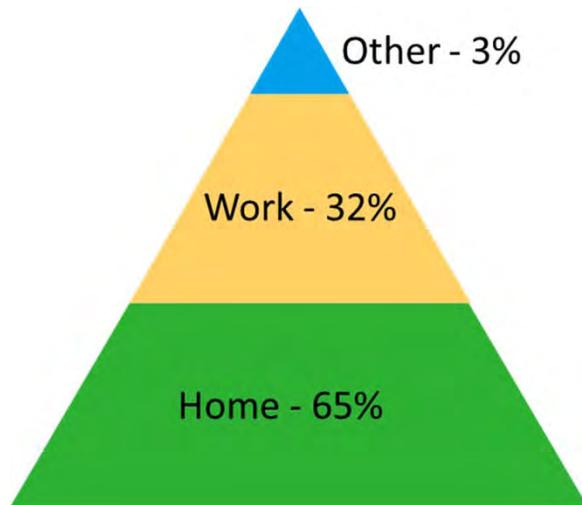

## 3. Vehicle driving and charging throughout the day

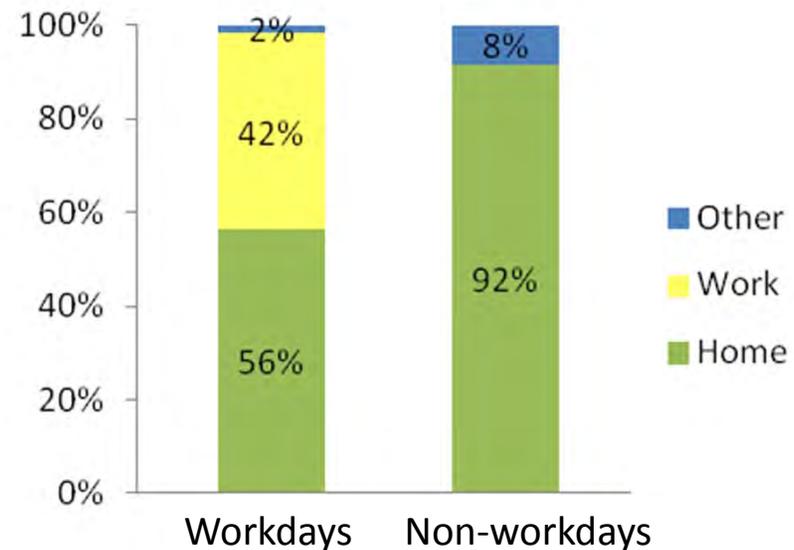

# Where did PEV drivers with access to workplace charging choose to charge?

Nissan Leafs

**Overall Charging Frequency by Location (to scale)**

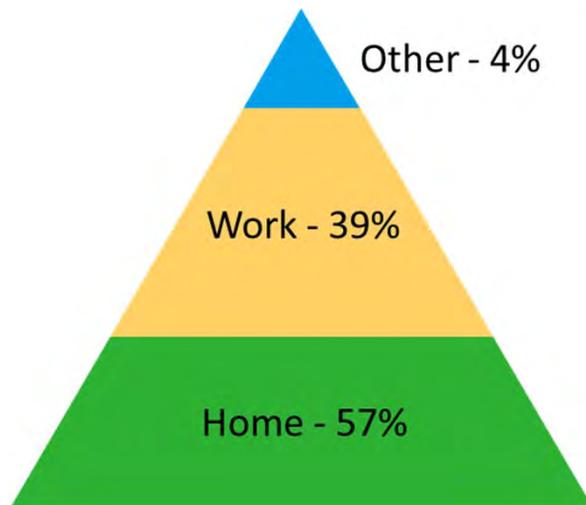

**Percent of Charging Events by Location and Day**

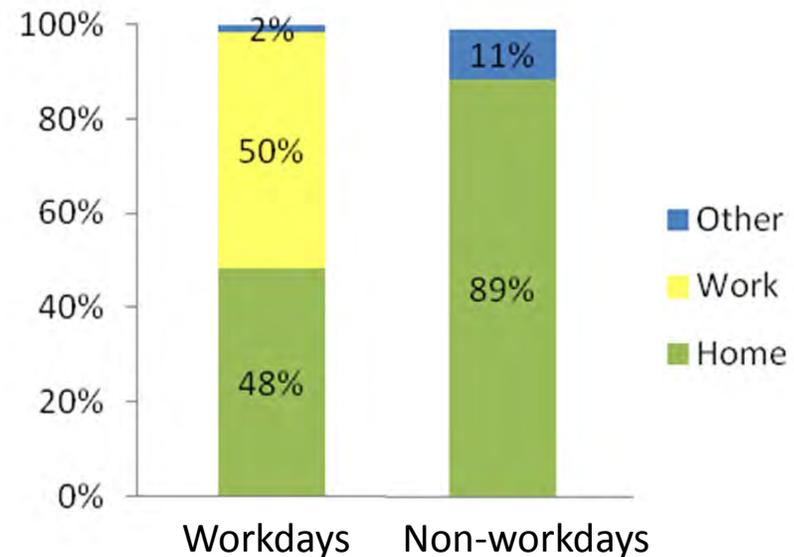

# Where did PEV drivers with access to workplace charging choose to charge?

Chevrolet Volts

**Overall Charging Frequency by Location (to scale)**

**Percent of Charging Events by Location and Day**

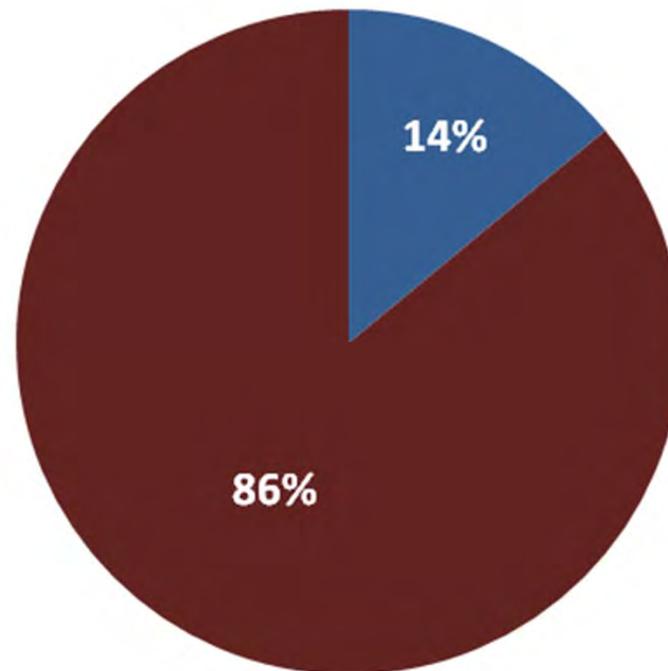

## ***How much did PEV drivers charge at work vs. home?***

- Common assumption: If drivers have access to home and work charging, they will charge at home and “top off” at work

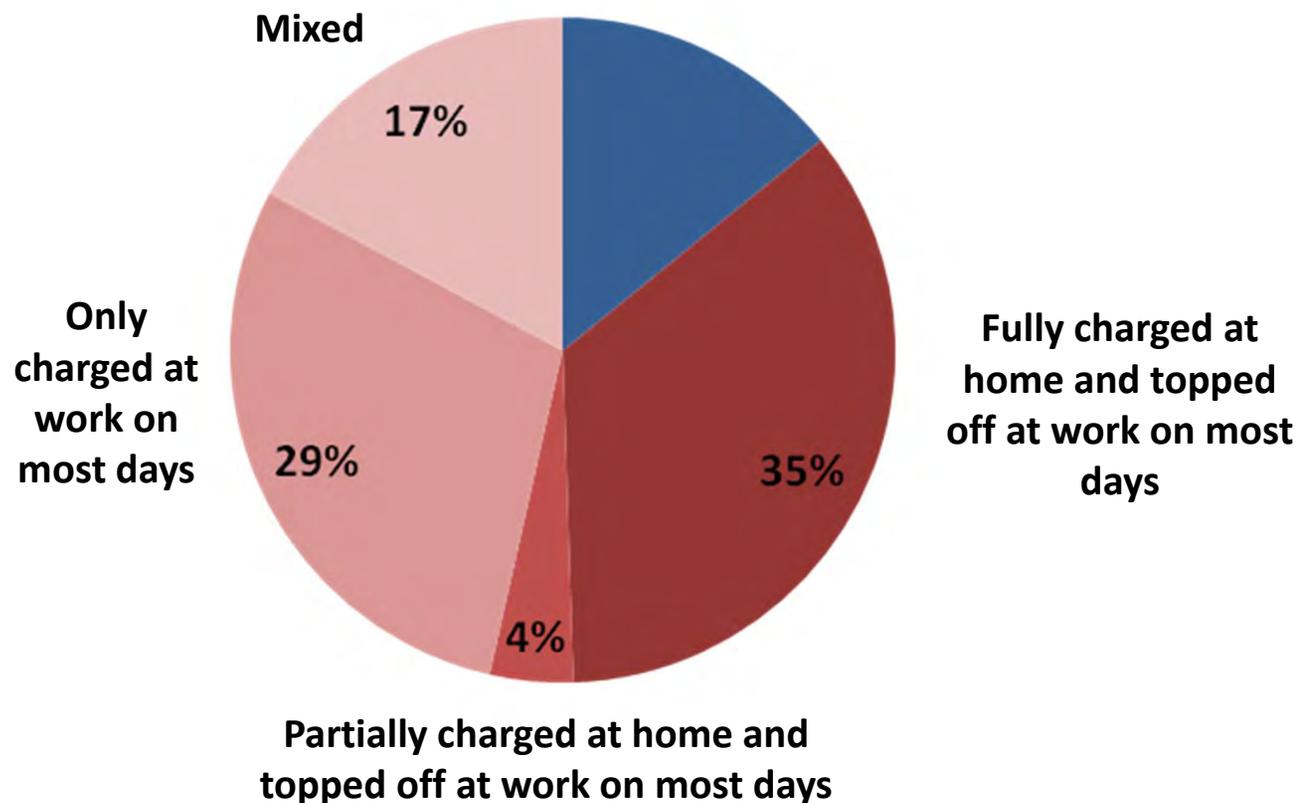

## ***How much did PEV drivers charge at work vs. home?***

- 14% of Leafs studied needed to charge at work in order to complete their daily commute on most days
- On these days, they charged at home and topped off at work as expected

## *How much did PEV drivers charge at work vs. home?*

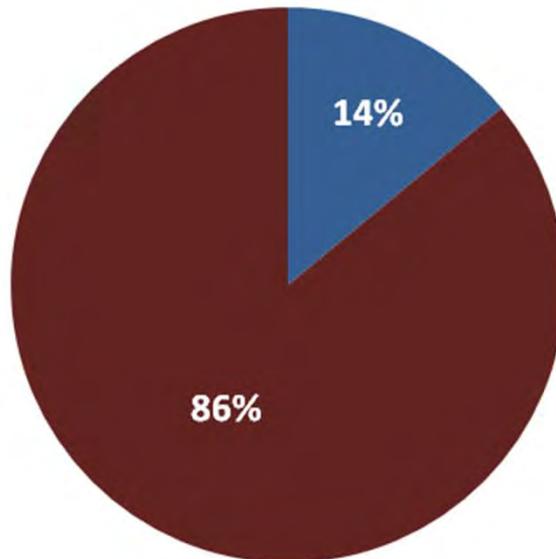

- Leaf drivers who did not need workplace charging on most days had varying behavior

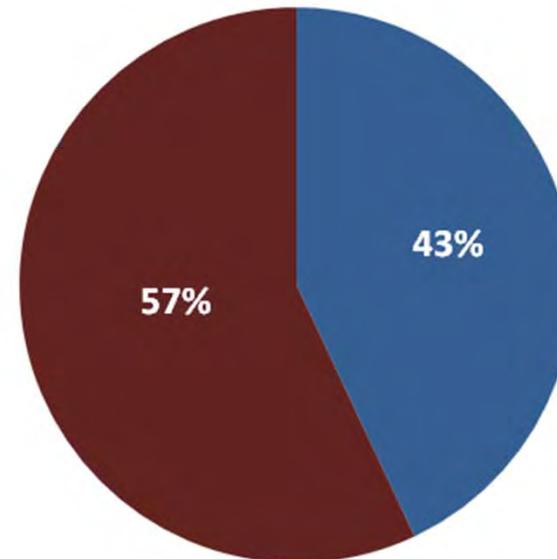

## How many drivers needed to charged at work to complete their commutes?

- Assumption: if you need it, you need it; if you don't, you don't
- 14% of vehicles needed workplace charging to complete their daily driving on *most* days, but...
- 43% of vehicles needed workplace charging to complete their daily driving on *some* days

Percent of vehicles needing to charge at work on at least 50% of days

Percent of vehicles needing to charge at work on at least 5% of days

■ Needed  
■ Not Needed

## ***Does workplace charging increase electric vehicle miles traveled?***

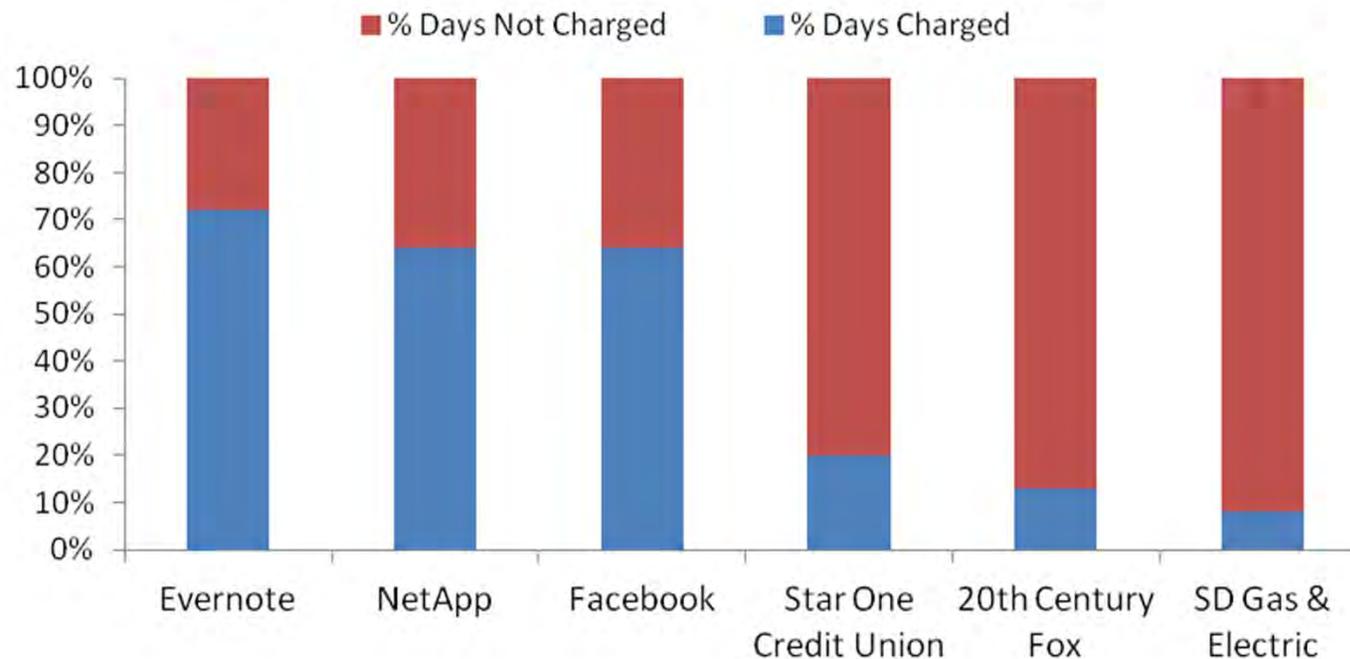

Yes!

- On days when Leaf drivers needed to charge at work, workplace charging extended their range by an average of 15 miles
- Round-trip commutes on these days averaged 73 miles
- On days when drivers did not need workplace charging but used it, they averaged 12% more miles than on days when they did not charge at work.

## How often did drivers charge at work?

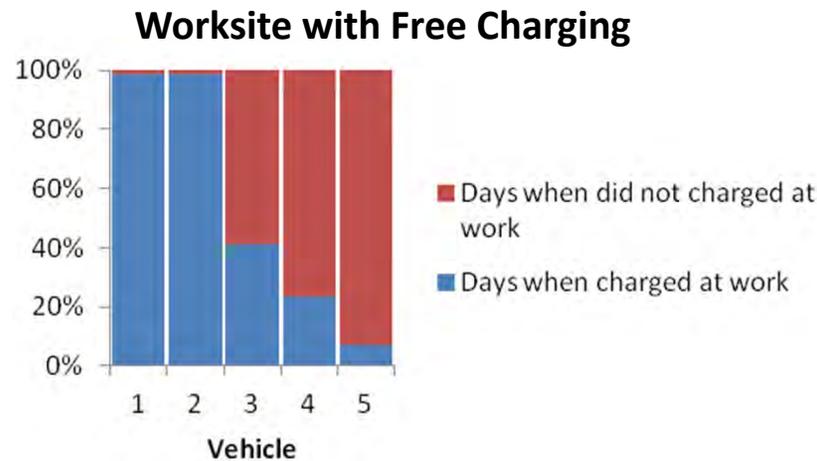

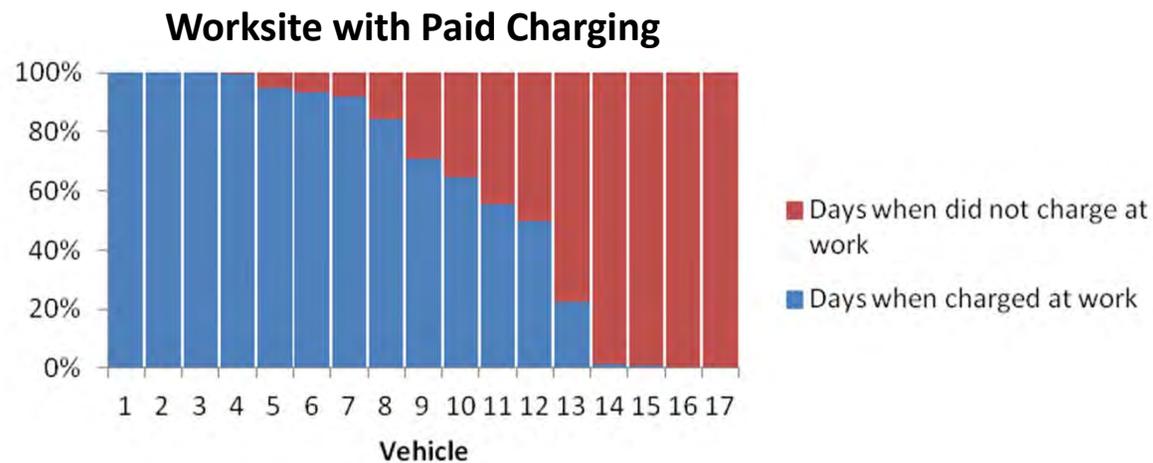

- Assumption: if they can charge at work, they will
- A study of Leaf and Volt parking and charging at 6 work sites showed dramatic differences from site to site...

### Days With and Without Charging

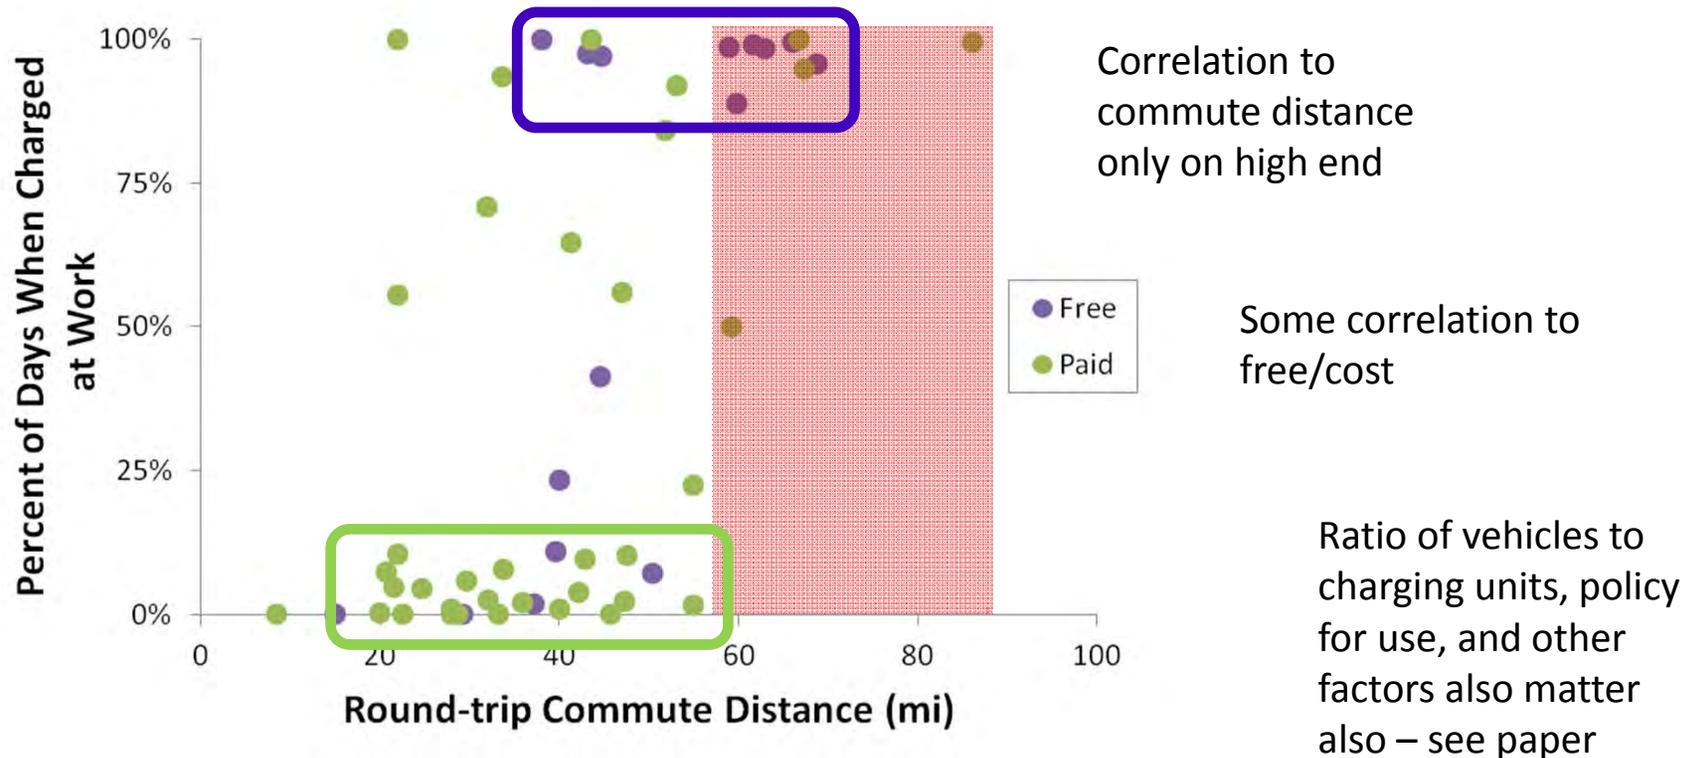

# How often did drivers charge at work?

- ... and from vehicle to vehicle at the same site

# What determines whether drivers will charge at work?

From 47 Leafs, 5 Volts at 6 worksites

## ***Which is better: AC Level 1, Level 2, or DC Fast Chargers***

- Know your vehicles – charge power varies by vehicle
  - Toyota Prius Plug-in charges at only 2 kW
  - Thus far, only BEVs can use DCFC and connectors differ
- L2:
  - Can charge multiple vehicles per day
  - Provides option of managing load
- L1:
  - Employees can plug in and forget it
  - Cheaper equipment but probably same to install
  - Lower overall electricity demand
- DCFC:
  - Provides flexibility, good for “emergencies”
  - Expect visitors
  - Expensive (but do the math)

***What policy should employers adopt to manage charging?***

**It depends on your goals!**
