

# BioenergizeME

## Infographic Challenge

### Understanding America's Bioenergy Choices

The Energy Department is challenging high school students to investigate a bioenergy topic and design an infographic that illustrates their research.

Bioenergy is derived from organic matter to produce renewable fuels and power. This national challenge aims to inspire students to explore America's bioenergy choices and share what they learn with others.

The Energy Department's Bioenergy Technologies Office is sponsoring this competition, and a panel of bioenergy experts will judge submissions.
