FAQs

- 1) Import prices are "landed" which is the commodity price plus transportation to the US terminal. It does NOT include regassification. It DOES include off-loading (I recently confirmed this with the importers).
- 2) The data is provided by the importers as a condition of their import authorizations (issued by this office). It is reported as filed (we verify it).
- 3) Spot cargos are only identified for 2006 and later years. Prior to 2006, spot cargos could be included in either long-term or short-term types.
- 4) Short-term imports are those cargos imported under the company's short-term or "blanket" authorization. This type of authorization covers supply contracts with terms of under 2 years, including spot cargos. The authorization is not based on a specific supply contract but covers all of the importer's short-term supply deals. We do not have copies of those contracts and they are not filed with the applications.
- 5) Long-term imports are those cargos imported under the company's long-term authorization. This type of authorization is tied to one specific supply contract with a term of 2 or more years. Redacted copies of the contracts are available on our website (info below).
- 6) The companies are required to file the volume data in Mcf. Therefore, data collected by the Division of Natural Gas Regulatory Activities doesn't necessarily include equivalent volumes measured in MMBtu.
- 7) The prices for exports from Kenai to Japan are "delivered." This is the commodity price plus transportation to the receiving terminal.
- 8) The prices for all other LNG exports and re-exports are the prices at the point of export, also known as FOB (freight on board).
