## INTRODUCTION

This book contains Errata and Revisions for Volume IV, Appendices 1, 4, 6, 9, 10, and 12-16.

Paragraphs are counted from the top of the page, e.g., Par. 1 begins with the first line on the page, whether that line is the actual beginning of a paragraph or not.

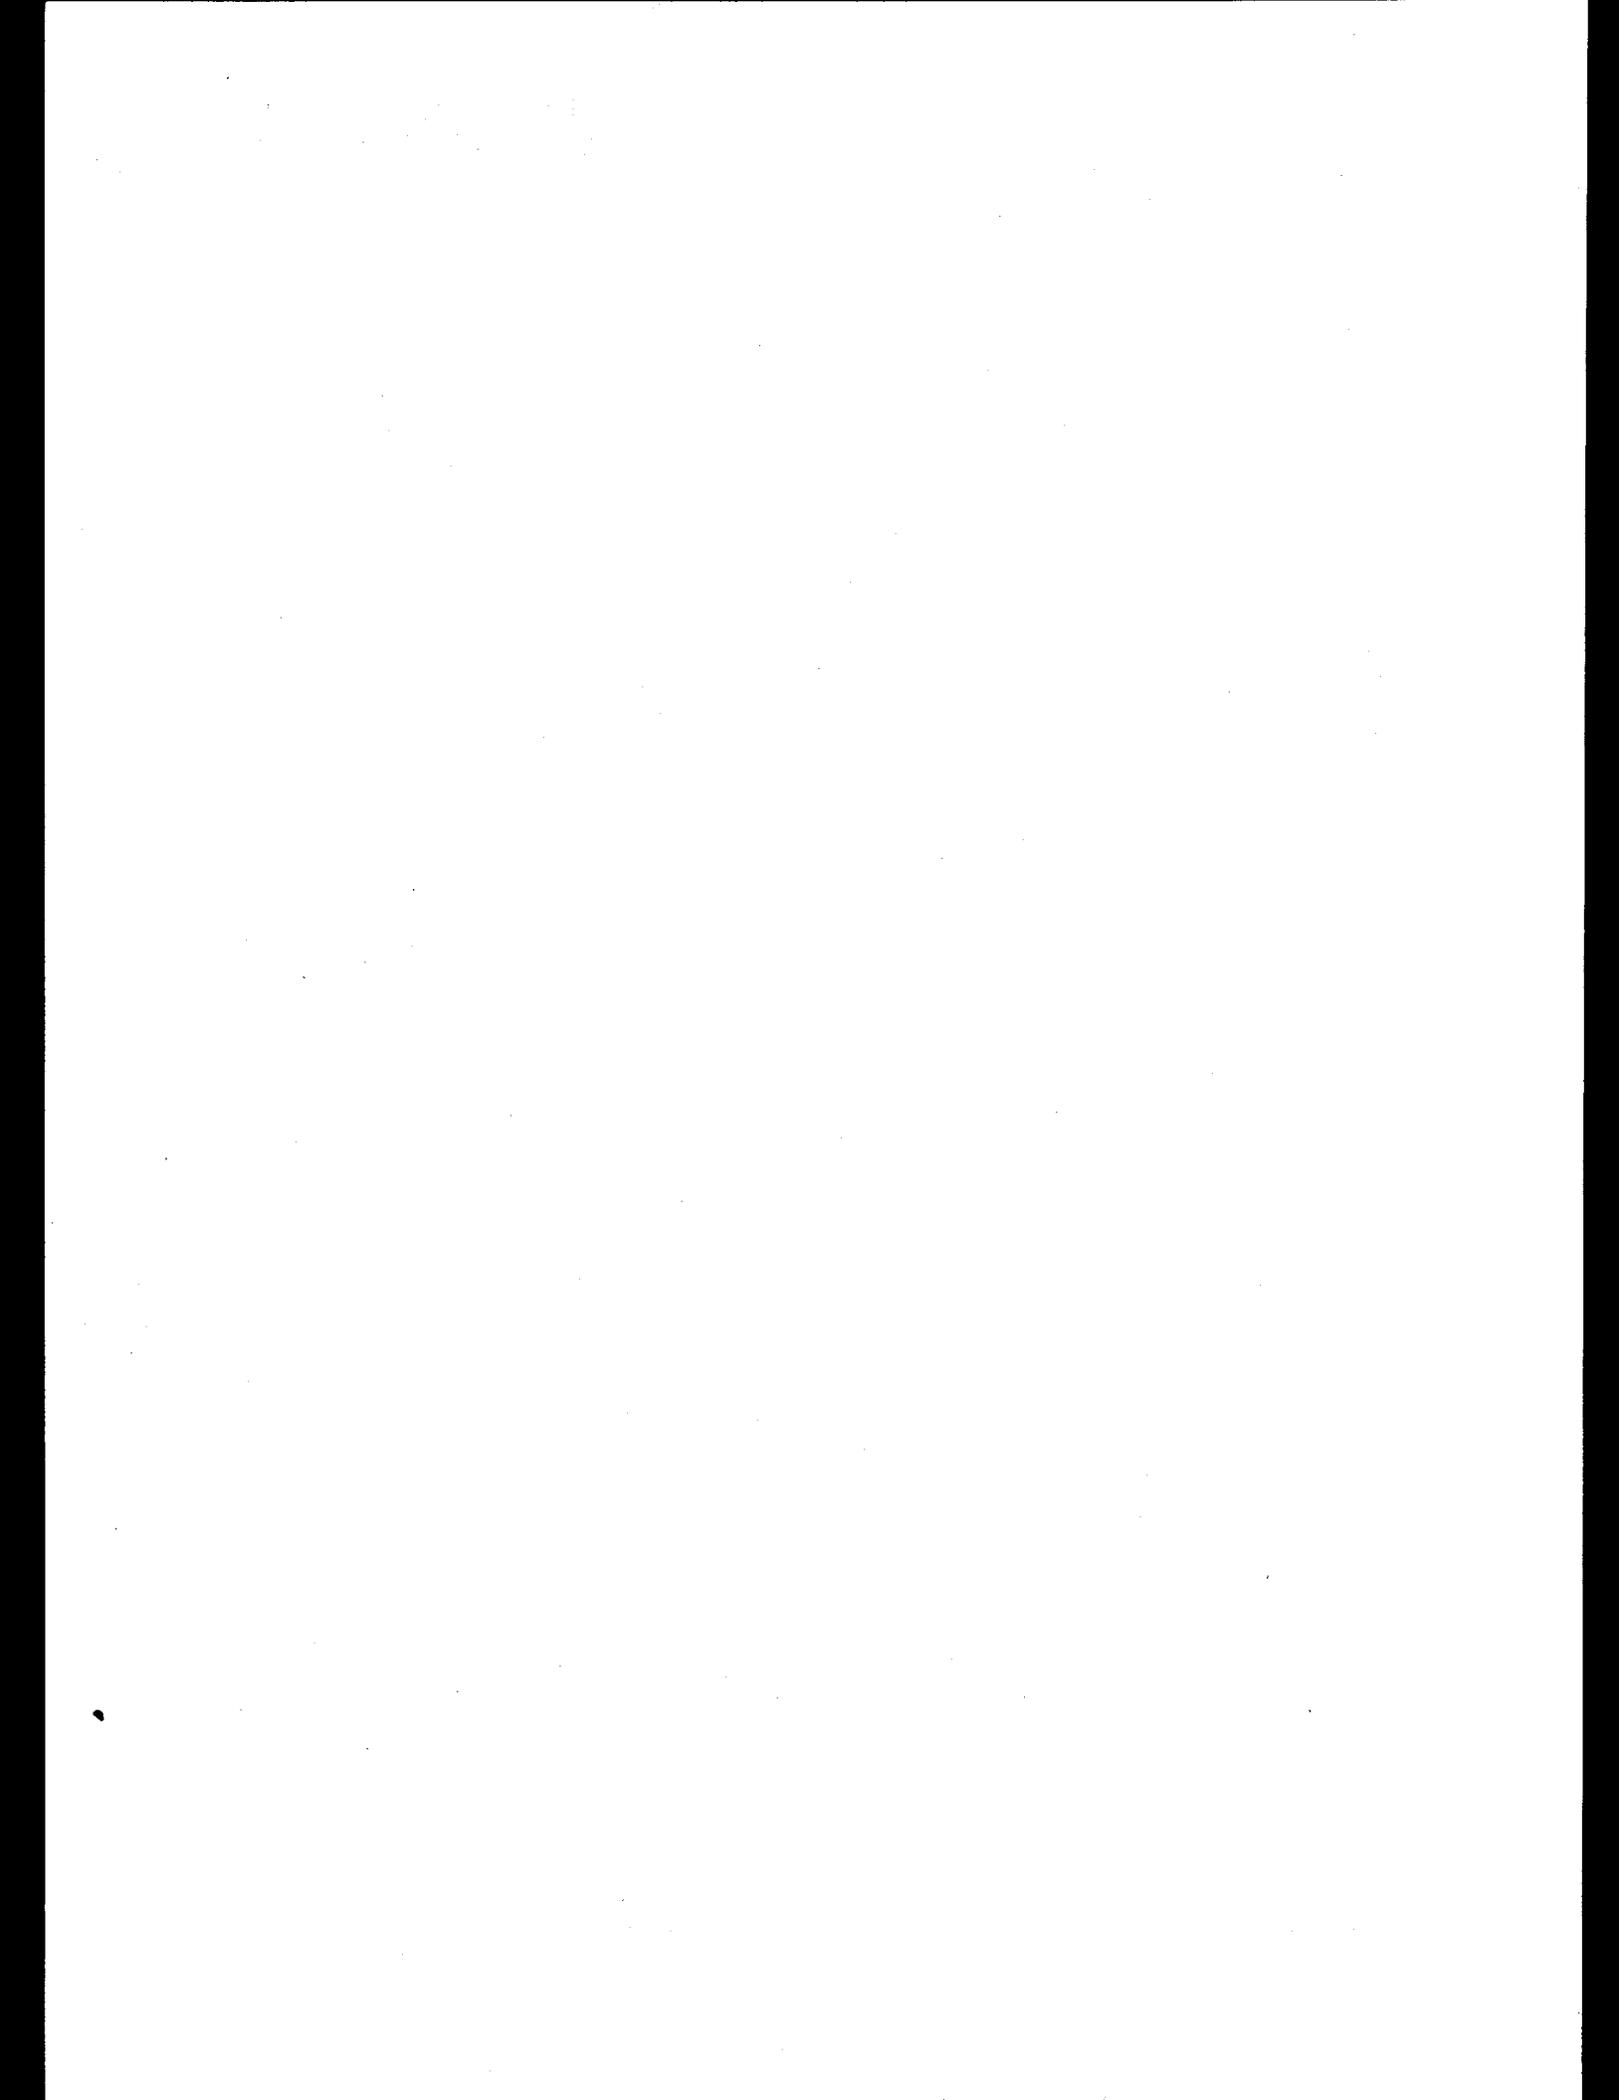

Minor changes in tables and figures are described in the Errata and Revisions sheets. Tables and figures that are new or corrected and republished are presented at the end of each appendix section.

# **ERRATA AND REVISIONS**

## **APPENDIX 1**

### **ENGINEERING DESCRIPTION**

## 1.2 SITE-SPECIFIC ADAPTATIONS

- Page 1: Last bulleted item, Line 2, should read: ..., approximately 30 feet above the collider ring....
- Page 21: Figure 1.2.2-5, add to the Legend: Details not to scale.
- Page 23: Insert at the end of last paragraph: An AT&T fiber optics line currently under construction approximately 7 miles north of the proposed SSC may also be available for connection of the SSC communications line.
- Page 26: Figure 1.2.3-1, delete the incorrect reference to the location of Kaneville that appears between proposed E6 and F6 locations on the ring
- Page 32: Figures 1.2.3-3, Legend, first item in right column should read: Construct New 1-Lane Paved Road
- Page 38: Figure 1.2.4-1, upper peninsula of Michigan was omitted from drawing insert at bottom. While drawing was intended to denote only contiguous area of the state, for comparability with other state maps, upper peninsula was added
- Page 40: Par. 7, last two lines should read: and 0.4 mi southeast of the intersection of Wooster Road and Roots Station Road.  
  
Last paragraph, second and last sentence should read: The site is 0.2 mi west of the intersection of Rolf Road and Tuttle Road
- Page 41: Par. 9, last line should read: Waterloo Munith Road.
- Page 42: Par. 2, last line should read: Waterloo Munith Road.  
  
Par. 3, last line should read: site is on Edgar Road...
- Page 46: Par. 5, Line 2 should read: ... Barnes Road and Edgar Road..., Line 6 should read: ... along Edgar Road and Annis Road...
- Page 55: Figure 1.2.5-4, change the substation number at the upper center of the ring from No. 1 to No. 2
- Page 58: Par. 1, delete the second-to-the last sentence
- Page 78: Par. 5, Line 1, delete: , F2, and F4; delete last sentence

The first part of the document discusses the importance of maintaining accurate records of all transactions. It emphasizes that every entry should be supported by a valid receipt or invoice. This ensures transparency and allows for easy verification of the data.

In the second section, the author outlines the process of reconciling the accounts. This involves comparing the internal records with the bank statements to identify any discrepancies. If a difference is found, it is crucial to investigate the cause immediately to prevent further errors.

The third section covers the preparation of financial statements. These statements provide a clear overview of the company's financial health and are essential for decision-making. The author provides a detailed breakdown of how to calculate key metrics such as profit margins and cash flow.

Finally, the document concludes with advice on how to use the gathered information to improve business operations. Regular reviews and adjustments are necessary to stay on top of the market and ensure long-term success.

**NEW AND CORRECTED FIGURES**

[The page contains extremely faint and illegible text, likely bleed-through from the reverse side of the document. The text is too light to transcribe accurately.]

**ERRATA AND REVISIONS**

**APPENDIX 4**

**LAND ACQUISITION PLANS**

Handwritten text at the top of the page, possibly a title or header.

A vertical line of text or a margin marker running down the left side of the page.

Handwritten text at the bottom left of the page.

Handwritten text at the bottom right of the page.

**LAND ACQUISITION PLANS**

- Page 13:** Par. 1, delete the last sentence and insert the following:  
In April 1988 the Tennessee Legislature established stratified fee estate with Senate Bill No. 2185. At the same time, House Joint Resolution No. 476 was passed which expresses the intent of the Legislature to authorize up to \$100 million of general obligation bonds to acquire land for the SSC (Weinhold 1988).
- Page 14:** Par. 4, Line 2, reference should read: (Hassell 1988)
- Page 16:** Table 4-2, Total Number of Relocations should read: AZ=6, CO=23, IL=219, MI=221, NC=180, TN=128, TX=175; delete the last two rows of the table, titled "Residences" and "Businesses"
- Page 17:** Table 4-3, Total in Texas should read: 285; Electric Transmission for Illinois should read: 0; water for Illinois should read: 6<sup>b</sup>; note b should read: Miscellaneous Utilities under Electric Transmission for Colorado, delete the words: Fee with surface use lease back, insert: (easement); delete footnote d and the reference to it after the Colorado roads entry.
- Page 18:** Section 4.4.1.3, last sentence should read: A total of six relocations would be required.
- Page 19:** Section 4.4.2.1, Par. 1, Line 1, replace the number 62,680 with the number 52,520  
  
Section 4.4.2.1, Par. 2, Line 1, the date should read: September 2, 1987
- Page 20:** Section 4.4.2.3, second sentence should read: A total of 23 relocations are required. Delete the third sentence.
- Page 22:** Section 4.4.3.3, last sentence should read: A total of 219 relocations will be required.  
  
Section 4.4.3.5, Line 4, insert the word may before the word require.
- Page 23:** Lines 3 and 4, delete the following: the transmission line and
- Page 24:** Section 4.4.4.3, last sentence should read: A total of 221 relocations will be required.
- Page 26:** Section 4.4.5.3, Line 2, should read: A total of 180 relocations would be required.

Page 27: Section 4.4.6.3, last sentence should read: A total of 128 relocations would be required.

Page 29: Section 4.4.7.3, last sentence should read: A total of 175 relocations would be required.

## **APPENDIX 6**

# **EARTH RESOURCES ASSESSMENTS**

EARTH RESOURCES ASSESSMENTS

- Page 8: Section 6.3.1.2, Line 1 should read: Up to 2.5 million yd<sup>3</sup>...; Lines 3 and 4 should read: ... This will include 1.2 million yd<sup>3</sup> of rock and 1.3 million yd<sup>3</sup> of soil...
- Page 13: Beginning with Line 5, text should read: yet undetermined. Approximately 30 wells are known to be currently producing within 1 mi of the ring alignment. However, only 2 to 3 wells are within the 1,000-ft construction zone, (these would be directly affected) and less than 20 wells are within 1/4 mi of the collider alignment (some of these might be affected). Although accurate data ...
- Page 14: Par. 2, Line 6, insert the word nontopographic before the word effects
- Par. 4, Second-to-last paragraph, after the word sulfides, insert: to negligible levels
- Page 17: Section 6.3.4.2, Par. 1, next to last line should read: ... Rock spoils are 69 percent Saginaw...
- Section 6.3.4.2, Par. 2, Line 5, reference citation date should read: 1976
- Page 19: Par. 2, Line 4, after the word "dry." insert the following: The impact of the SSC will be generally limited to wells currently producing in proximity to the ring. Only 2 to 4 producing wells are located in the 1,000 ft-wide collider construction zone (these would be directly affected), and only about 10 producing wells lie within 1/4 mi of the collider alignment (some of these might be affected). The amount of area surrounding SSC facilities that must be cleared of oil production is as yet undetermined. However, the overall effect on regional reserves is expected to be small. In part, the impact could be mitigated by drilling new, angled wells to intercept the same reserves.
- Page 23: Par. 4, Line 3, add the following: However, the booster excavating may intersect one or more caves. Potential impacts to the cave hydrology and ecology are discussed in Volume IV, Appendices 7 and 11.
- Par. 5, Line 5, insert new sentence before sentences beginning "The piles...": If the topographic depressions are determined to be sinkholes whose hydrologic integrity may be impacted by changes to the surface drainage, the potential for spoils pile-related impacts will be mitigated by relocating the piles to flat bottomland areas.

Dear Mr. [Name],

I have received your letter of the 15th and am pleased to hear from you.

The information you provided is being reviewed and we will contact you again.

I am sure you will understand the need for thoroughness in this process.

Thank you for your patience and cooperation.

Sincerely,  
[Signature]

**ERRATA AND REVISIONS**

**APPENDIX 9**

**NOISE/VIBRATION ASSESSMENTS**

### NOISE AND VIBRATION ASSESSMENTS

**Page 1:** Par. 1, insert the following after the first sentence: The term "human receptors" is used to identify noise-sensitive locations where people live or work. The locations include residences, schools, churches, and recreational facilities. The term distinguishes between areas that are noise-sensitive because of people as opposed to those that are noise-sensitive because of animals.

Par. 1, Line 7 should read: ... Impacts to wildlife are ...

Par. 3, Line 9 should read: criteria for noise impacts where no laws or regulations are applicable....

Par. 4, Line 3 should read: levels and humans at each of the proposed sites ...

**Page 3:** Table 9-1 footnote, line 1 should read: The unit of sound is the decibel (dB). The level of sound...

**Page 7:** Insert the following at the end of the last paragraph:

Other additional mitigation techniques that potentially would be considered during construction planning could include the following:

- o Using quieted construction equipment.
- o using atmospheric sounding techniques to avoid loud sounds such as blasting when conditions are conducive to atmospheric focussing of sound.
- o Providing monetary grants to educational institutions for noise control upgrading of existing classroom structures, or structures proven to be in the planning stage at the time of the SSC request for proposal.
- o Providing financial support that allows local governments to enact and enforce laws and regulations that control noise generated at the community level.

**Page 17:** Par. 3, Line 1 should read: The cleaning, grubbing, and earthwork phases of new ...

Par. 3, Line 4 should read: work envisioned and also on the proximity of residences, schools, churches, and recreational facilities to the road work.

**Page 17:** Par. 5, delete the last sentence and insert: For a source  
(Cont) having a sound pressure level of 93 dBA at 50 ft (maximum hour)  
for example, the noise produced is estimated to reach 51 dBA  
at 6,400 ft.

Par. 7, Line 3 should read: traffic to residences, schools,  
churches, and recreational facilities.

**Page 23:** Par. 1, insert the following before the last sentence:

Other mitigation techniques which potentially would be con-  
sidered during detail design could include the following:

- o Including state-of-the-art noise control materials and  
techniques in the design of machinery buildings and  
equipment enclosures.
- o Requiring contractors responsible for design to use veri-  
fied and validated sound-emission models to identify  
equipment that would represent a potential noise impact  
if not subjected to special quieting techniques.
- o Requiring designers and contractors to specify available  
quiet machinery and components in conjunction with the  
results of the modeling described above.
- o Enforcing negative incentives for vendors of service area  
systems and components, with price penalties for vendors  
who fail to provide equipment that meets, and continues  
to meet, DOE system-design requirements for sound emission  
limits.

**Page 26:** Par. 2, Line 2 should read: noise impact -- human high  
annoyance and general environmental

Par. 3, Line 1 should read: The percentage of those who would  
be highly annoyed ...

Insert the following new paragraph after Par. 3:

It should be noted that high annoyance, as a function of day-  
night average sound level, was developed from surveys of com-  
munity reaction to primarily aircraft noise, as well as some  
traffic and railroad noise in urban areas (U.S. EPA 1982). As  
such, the degree of high annoyance produced by a given day-  
night average sound level in rural areas would be expected to  
be different from the high annoyance produced in urban areas.  
Therefore, although the percentage of humans highly annoyed by  
project noise is calculated as a function of distance, the  
population measure of the noise impact is expressed in terms  
of numbers of people exposed to a given day-night average  
sound level.

Page 37: The title of Figure 9-15 should read: RESIDENCES AND SCHOOLS

Page 39: Subheading B should read: Proximity of Residences and Schools to Project Activity and Expected Impacts

Par. 2, Line 1 should read: Residences and a school in the project vicinity are

Par. 2, Line 3 should read: potential for impact on the residences and the school are discussed by project phase

Par. 3, Line 1 should read: The lack of residences within 2,000 ft of the service or

Insert the following new paragraph after Par. 3:

An examination of 1981 aerial photos (1 inch to 5,000 ft scale) supplemented by 1988 site visit information indicated that there are no residences or community facilities within 2,000 ft of the center of a service or intermediate access area. Therefore, it is anticipated that no people will experience an L<sub>dn</sub> of greater than 60 dBA due to construction at E and F sites.

Par. 4, Lines 1 and 2 should read: The lack of residences within 2,000 ft of the near and far clusters will preclude any humans from being highly annoyed. Impacts on residences in ...

Par. 5, Lines 2 and 3 should read: ... from approximately F10 to E9 in the northeast ...

Par. 5, Line 4 should read: approximately K3 to F5 in the southwest ...

Par. 5, Line 5 should read: annoyed humans in the southwest ...

Par. 5, Line 6 should read: the lack of residences in the southwest ...

Page 40: All paragraphs: Change "human receptors" to "humans"

Par. 1, Line 2 should read: ... due to the lack of residences ...

Insert the following new paragraph after Par. 3:

An examination of 1981 aerial photographs (1 inch to 5,000 ft scale) supplemented by 1988 site visit information indicates that there are no residences within 700 ft of the center of an

Page 40: F area. Therefore, it is anticipated that no people will  
(Cont) experience an  $L_{dn}$  of greater than 55 dBA due to service area  
operations.

Page 43: The title of Figure 9-18 should read: RESIDENCES

Page 44: All paragraphs: change "human receptors" to "humans"

Insert the following new paragraphs and Table 9-10 (see New  
and Corrected Tables section) after Par. 1:

An examination of 1984-85 aerial photos (1 inch to 5,000 ft scale) supplemented by 1988 site visit information indicated the following current distribution of houses around E and F areas (see Table 9-10). At an average of 2.57 human occupants per residence in Colorado (U.S. Bureau of the Census 1988), a total of approximately 5 people would experience an  $L_{dn}$  of greater than 70 dBA, and a total of 3 people would experience an  $L_{dn}$  of between 60 and 70 dBA during construction at E and F areas.

In addition, the aerial photos and U.S.G.S. 7 1/2-minute quadrangles were examined for community facilities expected to experience an  $L_{dn}$  of greater than 60 dBA. No schools or churches within 2,000 ft of an E or F area were identified.

Par. 3, Line 1 should read: The small number of humans living close to K2, ...

Par. 4, Line 1 should read: High human annoyance due to road construction ...

Par. 5, Line 5 should read: annoyed on a temporary basis ...

Par. 6, Line 1 should read: High human annoyance should be confined to F3 ...

Insert the following new paragraph after Par. 6:

An examination of 1984-85 aerial photos (1 inch to 5,000 ft scale) supplemented by 1988 site visit information indicated that, at an average of 2.57 human occupants per residence, 3 people live in areas with an expected  $L_{dn}$  during operations of between 55 and 60 dBA (areas within 700 ft of the center of a service area).

Page 48: The title of Figure 9-20 should read: RESIDENCES AND SCHOOLS

The location of Kaneville that appears between sites E6 and F6 on the ring should be deleted

Page 49: Par. 1, Line 1 should read: Humans located near F8, E9, F9, E10, E1, F1, E2, F2, E3, F3, E4, F4, F5, E6, F6, E7, F7,

Insert the following new paragraphs after Par. 1:

An examination of aerial photos shot at a scale of 1 inch to 2,000 ft in 1985-88 supplemented by 1988 site visit information indicated the following current distribution of houses around E and F areas (see Table 9-11). At an average of 2.66 human occupants per residence in Illinois (U.S. Bureau of the Census 1988), a total of approximately 114 people would experience an  $L_{dn}$  greater than 70 dBA, and a total of approximately 1,218 people would experience an  $L_{dn}$  between 60 and 70 dBA during construction at E and F areas.

In addition, the aerial photos and U.S.G.S. 7 1/2-minute quadrangles were examined for community facilities expected to experience an  $L_{dn}$  of greater than 60 dBA during construction. Two schools were identified. The first, McAuley School, is located approximately 2,000 ft from E10. Its estimated 28 occupants would experience an  $L_{dn}$  of 60 dBA from construction. The second, Indian Prairie School (formerly Eola School), is located approximately 600 ft from E1. Its current 340 occupants (planned to increase to 665) would experience an  $L_{dn}$  of between 70 and 75 dBA during construction. Other schools identified within 1 mi of SSC surface construction locations include Kaneland Schools, located 4,000 ft from E6, and St. Charles High School, located 5,000 ft from E9. Neither of these schools or their adjunct facilities would receive an  $L_{dn}$  of greater than 60 dBA from SSC surface facilities construction.

Par. 3, Lines 2 and 3 should read: cluster facilities will reduce the potential for noise impact. The small number of people living in residences close to ...

Par. 4, Line 1 should read: High human annoyance due to road upgrade and construction ...

Par. 5, Line 1 should read: Humans living close to spoils haul ...

Page 50: Par. 1, Line 1 should read: Humans located near F8, F9, F1, F3, F5, F6, and F7 ...

Insert the following new paragraph after Par. 1:

An examination of 1985-88 (1 inch to 2,000 ft scale) aerial photos supplemented by 1988 site visit information indicated that, at an average of 2.66 human occupants per residence, 45

**Page 50:** people live in areas with an expected  $L_{dn}$  during operations of  
(Cont) between 55 and 60 dBA (area within 700 ft of the center of a  
service area).

Par. 4, Line 1 should read: High human annoyance is not  
expected due to the small number

**Page 53:** The title of Figure 9-22 should read: RESIDENCES

F9, E10, F10, F1, E2 ...

Insert the following new paragraphs and Table 9-12 (see New  
and Corrected Tables section) after Par. 1:

An examination of 1988 aerial photos (1 inch to 660 ft and 1  
inch to 330 ft scales) supplemented by 1988 site visit  
information indicated the following current distribution of  
houses around E and F areas (see Table 9-12). At an average  
of 2.70 human occupants per residence in Michigan (U.S. Bureau  
of the Census 1988), a total of approximately 62 people would  
experience an  $L_{dn}$  of greater than 70 dBA, and a total of  
approximately 408 people would experience an  $L_{dn}$  of between 60  
and 70 dBA during construction at E and F areas.

In addition, the aerial photos and U.S.G.S. 7 1/2-minute  
quadrangles were examined for community facilities expected to  
experience an  $L_{dn}$  of greater than 60 dBA. No schools or  
churches within 2,000 ft of an E or F area were identified.

Par. 4, Line 1 should read: A small number of humans living  
within ...

Par. 6, Line 1 should read: High human annoyance due to road  
construction ...

Par. 7, Line 1 should read: Humans living close to spoils ...

**Page 55:** Par 1, Line 1 should read: Humans living near ...

Insert the following new paragraph after Par. 1: An examina-  
tion of 1988 (1 inch to 660 ft and 1 inch to 330 ft scale)  
aerial photos supplemented by 1988 site visit information ind-  
icated that, at an average of 2.70 human occupants per residence,  
24 people live in areas with an expected  $L_{dn}$  during operations  
of between 55 and 60 dBA (areas within 700 ft of the center of  
a service area).

Par. 4, Line 1 should read: High human annoyance is not  
expected ...

Page 58: The title of Figure 9-24 should read: RESIDENCES

Page 59: Par. 1, Line 1 should read: Humans living near ...

Insert the following new paragraphs and Table 9-13 (see New and Corrected Tables section) after Par. 1:

An examination of 1987 aerial photos (1 inch to 400 ft scale) supplemented by 1988 site visit information indicated the following distribution of houses around E and F areas (see Table 9-13). At an average of 2.62 human occupants per residence in North Carolina (U.S. Bureau of the Census 1988), a total of approximately 136 people would experience an  $L_{dn}$  of greater than 70 dBA, and 655 people would experience an  $L_{dn}$  of between 60 and 70 dBA during construction at E and F areas.

In addition, the aerial photos and U.S.G.S. 7 1/2-minute quadrangles were examined for community facilities expected to experience an  $L_{dn}$  of greater than 60 dBA. Two churches were identified. The first, Vernon Hill Church, located approximately 1,900 ft from F5, would experience an  $L_{dn}$  of approximately 60 dBA during construction. This church has an estimated attendance of 50-75 people on Sundays. Population estimates were not obtained for Brookland Church, located approximately 1,000 ft from F3 near Somerset. This church would experience an estimated  $L_{dn}$  of between 60 and 70 dBA during construction.

Page 60: Par. 1, Lines 1 and 2 should read: High human annoyance will be experienced at residences near F5, F7, F8, F9, F1, F2, F3, and F4

Insert the following new paragraph after Par. 1:

An examination of 1987 (1 inch to 400 ft scale) aerial photo data supplemented by 1988 site visit information indicated that, at an average of 2.62 human occupants per residence, approximately 60 people live in areas with an expected  $L_{dn}$  during operations of between 55 and 60 dBA (areas within 700 ft of the center of a service area).

Par. 3, Line 3 should read: located in Research Triangle Park, comparing ...

**Page 60:** Par. 3, next-to-last line should read: ... that the Durham  
(Cont) County -- Research Triangle Park regulation ...

Par. 5, Line 1 should read: High human annoyance is not expected ...

**Page 62:** The title of Figure 9-25 should read: RESIDENCES

**Page 64:** Par. 1, Line 1 should read: Humans living near F9, E10, F10,  
E1 ...

Insert the following new paragraphs and Table 9-14 after  
Par. 1:

An examination of 1988 aerial photos (1 inch to 1,000 ft scale) supplemented by 1988 site visit information indicated the following distribution of houses around E and F areas (see Table 9-14). At an average of 2.63 human occupants per residence in Tennessee (U.S. Bureau of the Census 1988), a total of approximately 55 people would experience an  $L_{dn}$  of greater than 70 dBA, and 409 people would experience an  $L_{dn}$  of between 60 and 70 dBA during construction at E and F areas.

In addition, the aerial photos, U.S.G.S. 7 1/2-minute quadrangles, and information provided by the Tennessee site proposer group were examined for community facilities expected to experience an  $L_{dn}$  of greater than 60 dBA. Five churches and one school were identified. Shady Hill Church is located approximately 2,000 ft from F8. A population estimate for this church was not obtained. This facility would be expected to receive an  $L_{dn}$  of 60 dBA during construction. Cherry Grove Baptist Church is located approximately 800 ft from F10. A

population estimate for this church was also not obtained. This facility would be expected to receive an  $L_{dn}$  of 70 dBA during construction.

The Church of Christ in College Grove is located approximately 1,800 ft from E8. The church has an estimated Sunday attendance of 100. This facility would experience an  $L_{dn}$  of between 60 and 65 dBA during construction. The College Grove United Methodist Church is located approximately 2,000 ft from E8. The church hosts a daycare center with an average daily population of 15-20. Sunday attendance is approximately 85. This facility would experience an  $L_{dn}$  of 60 dBA during construction. The College Grove Elementary School is located approximately 1,300 ft from E8. The school has an estimated daily attendance of 203. This facility would experience an  $L_{dn}$  of approximately 65 dBA during construction. The Patterson Baptist Church is located approximately 1,800 ft from E9. This church has an estimated Sunday attendance of 35. This facility would experience an  $L_{dn}$  of between 60 and 65 dBA during construction.

**Page 64:** Par. 3, Line 1 should read: Highly annoyed humans are  
(Cont) expected ...

Par. 4, Line 1 should read: High human annoyance due to road  
construction ...

Par. 5, Line 1 should read: Humans living close to spoils ...

Par. 6, Line 1 should read: High human annoyance will be  
limited to ...

Insert the following new paragraph after Par. 6:

An examination of 1988 (1 inch to 1,000 ft scale) aerial photo  
data supplemented by 1988 site visit information indicated  
that, at an average of 2.63 human occupants per residence  
(U.S. Bureau of the Census 1988), approximately 24 people live  
in areas with an expected  $L_{dn}$  during operations of between 55  
and 60 dBA (areas within 700 ft of the center of a service  
area).

**Page 66:** Par. 4, Line 2 should read: ... one-lane road; 21 mi of new,  
paved,...

Par. 4, Line 3 should read: ... 23 mi of upgraded, paved,  
two-lane roads ...

**Page 68:** The title of Figure 9-28 should read: RESIDENCES AND SCHOOLS

**Page 69:** Par. 1, Lines 1 and 2 should read: Humans living near F3, E4,  
F4, E5, E6, F6, E7, F7, E8, F8, E9, F9, E10, F10, F1, E2, and  
F2 ...

Insert the following new paragraphs and Table 9-15 after  
Par. 1:

An examination of 1983 aerial photos (1 inch to 5,000 ft  
scale) supplemented by 1988 site visit information indicated  
the following distribution of houses around E and F areas (see  
Table 9-15). At an average of 2.76 human occupants per  
residence in Texas (U.S. Bureau of the Census 1988), a total  
of approximately 25 people would experience an  $L_{dn}$  of greater  
than 70 dBA, and 284 people would experience an  $L_{dn}$  between 60  
and 70 dBA during construction at E and F areas.

In addition, the aerial photos and U.S.G.S. 7 1/2-minute qua-  
drangles were examined for community facilities expected to  
experience an  $L_{dn}$  of greater than 60 dBA. Two churches were  
identified. The first, Lumkins Church, is located approxi-  
mately 1,500 ft from E9. The church is currently closed.  
This church would be expected to receive an  $L_{dn}$  of between 60  
and 65 dBA during construction. The second, Bethel Church, is

Page 69: located approximately 1,100 ft from E10. Its estimated Sunday  
(Cont) attendance is 30 people. This facility would be expected to  
receive an L<sub>dn</sub> of 65 dBA during construction.

Par. 3, Line 1 should read: Few highly annoyed humans are  
expected ...

Par. 4, Line 1 should read: High human annoyance due to road ...

Par. 5, Line 1 should read: Humans living close to spoils ...

Par. 6, Lines 1 and 2 should read: High human annoyance will  
be limited ...

Page 70: Insert the following new paragraph after Par. 1:

An examination of 1983 (1 inch to 5,000 ft scale) aerial photo  
data supplemented by 1988 site visit information indicated  
that, at an average of 2.76 human occupants per residence,  
approximately 19 people live in areas with an expected L<sub>dn</sub> of  
between 55 and 60 dBA during operations (areas within 700 ft  
of the center of a service area).

Par. 3, Line 1 should read: High human annoyance is not  
expected ...

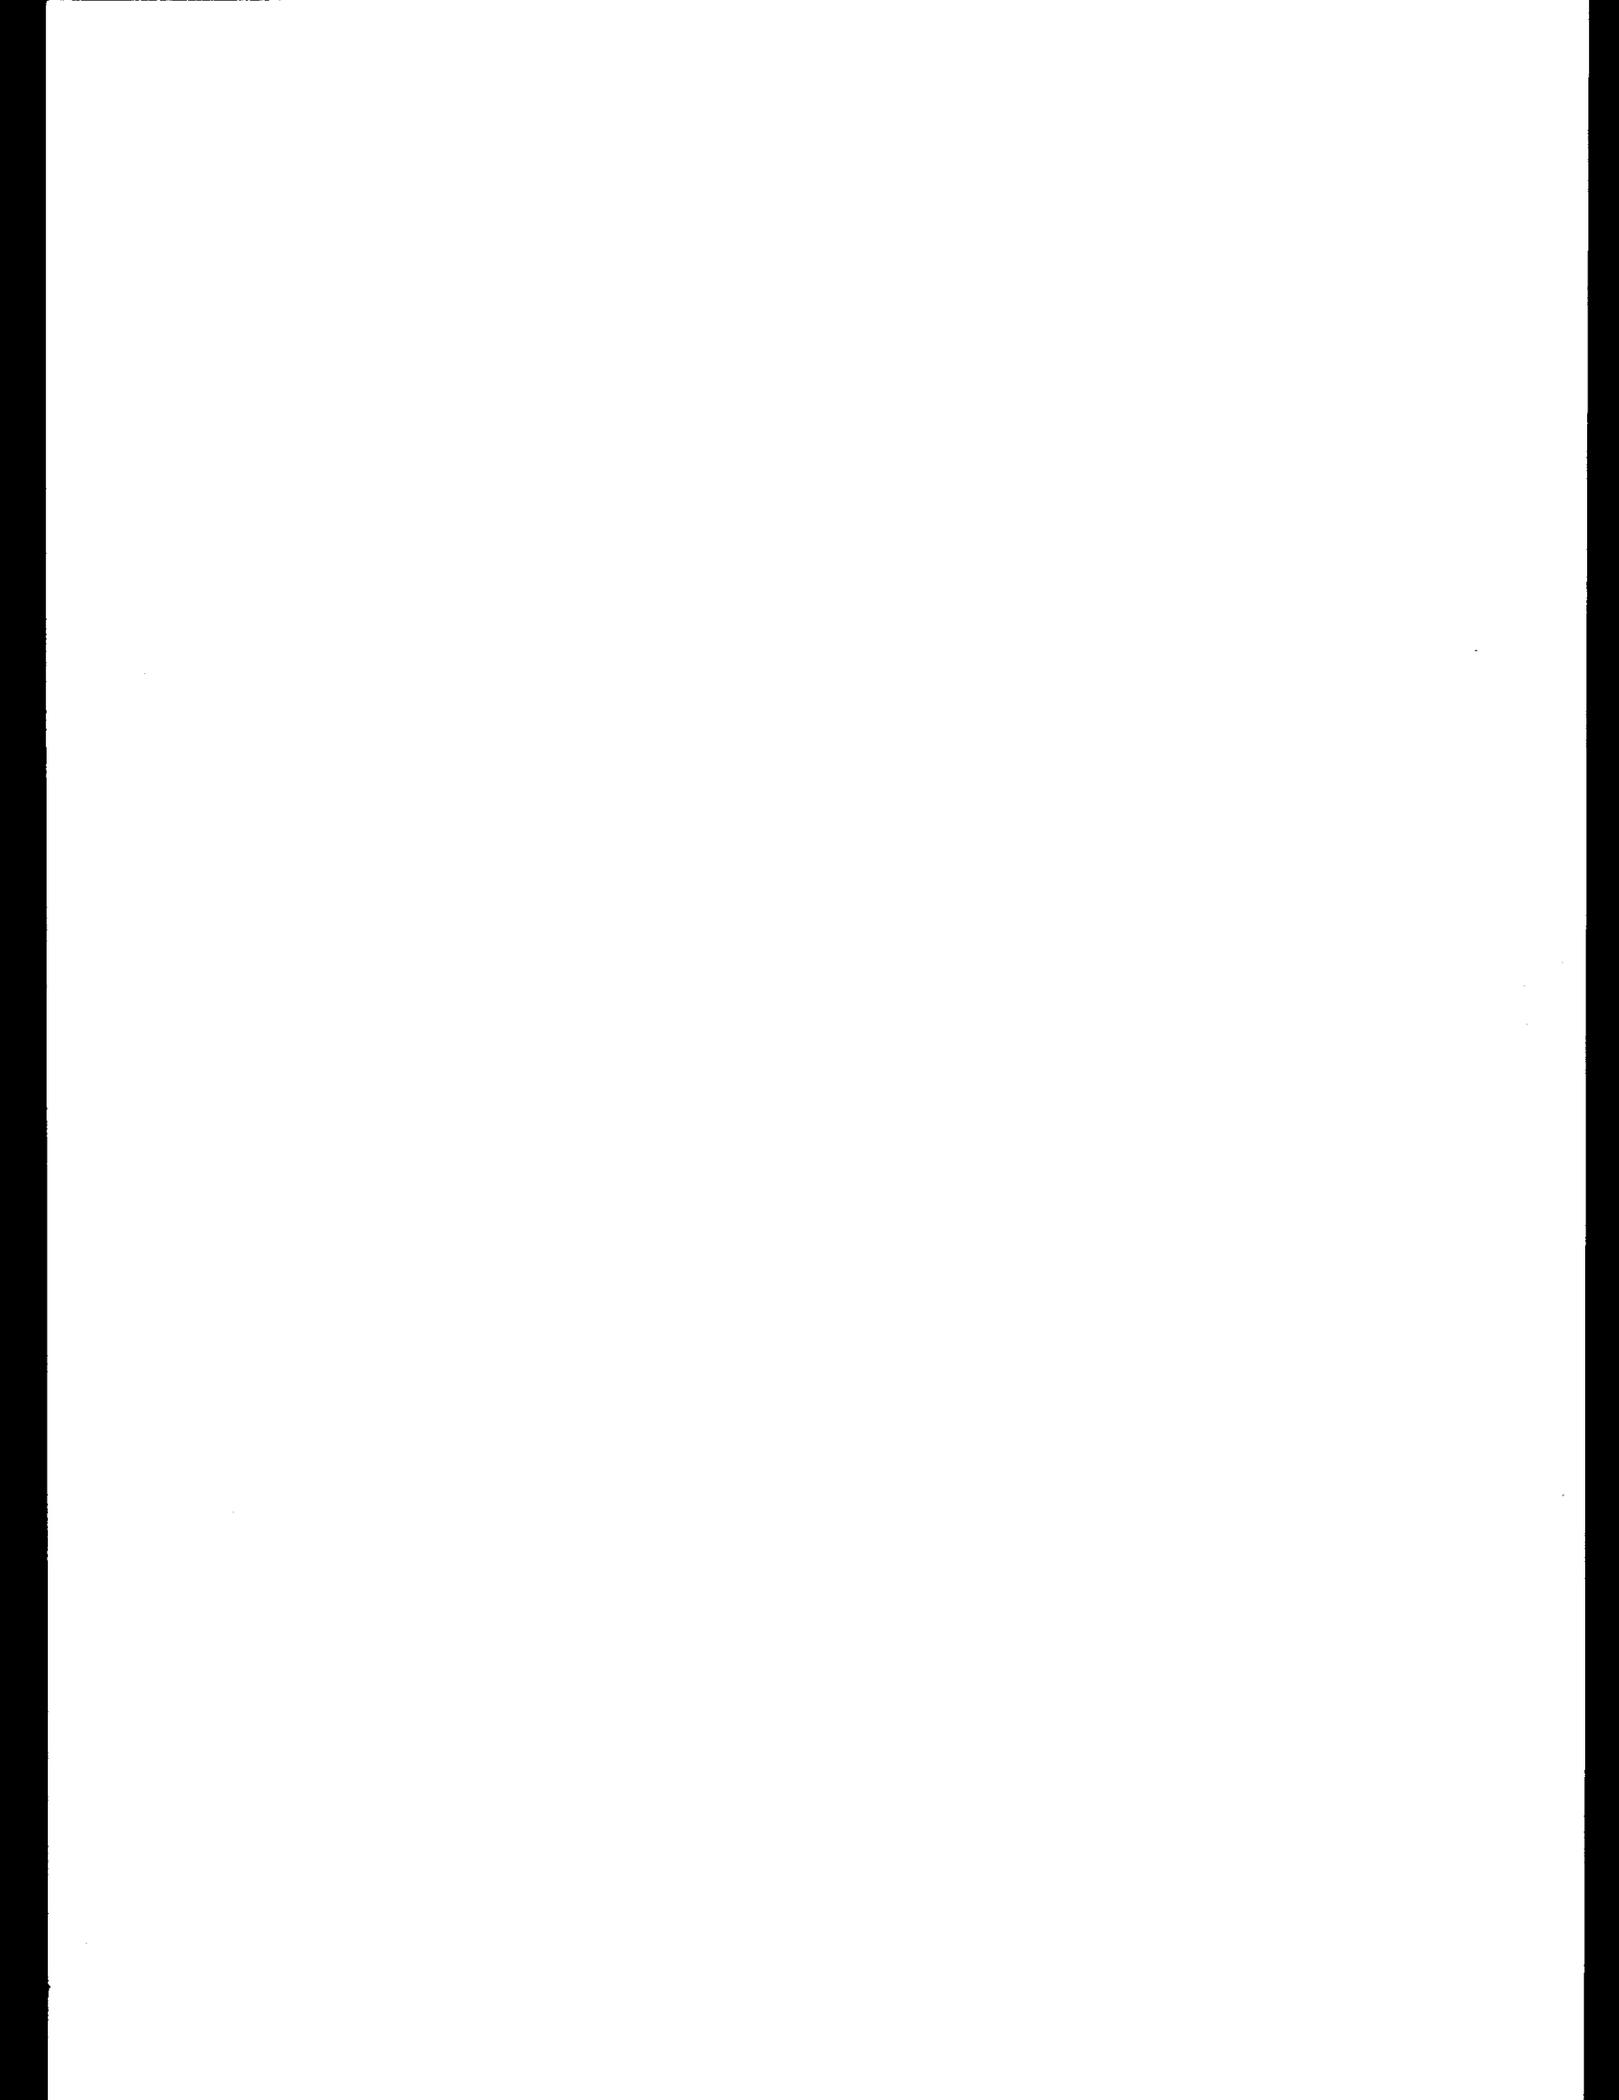

Page 84: Subsection B.1, add the following after the second para  
graph: Legislation has been enacted in Illinois to provide  
for preconstruction inspection of buildings within the sphere  
of influence, monitoring vibrations attributed to blasting,  
and providing compensation for any structural damages attri-  
buted to blasts.

WASTE DISPOSITION**

## HAZARDOUS SOURCE TERMS AND WASTE DISPOSITION

### 10.1 RADIATION AND HAZARDOUS/TOXIC SOURCE TERMS

- Page 7: Figure 10.1.2-1, second item in Legend should read:  
UNCONTROLLED SURFACE AREA WITH CONTROLLED ZONE AT BEAM  
PLANE
- Page 11: Figure 10.1.2-4, Caption should read:  
  
Annual dose equivalent in mrem for a person located radially  
from the beam centerline at a point approximately 6m (20 ft)  
downstream from the initial hadron interactions for  $2 \times 10^{17}$   
protons at 20 TeV ejected into heavy soil (assuming no  
beam absorber installation in this location for worst-case  
dose estimation) vs. radius from the line of impact of the  
beam.
- Page 12: Last paragraph, Line 2 should read: ... never experienced  
a full beam loss with the superconducting magnets in its  
operation ...
- Page 15: Figure 10.1.2-6, title, hadronic is misspelled hardronic.
- Page 16: Par. 2, Line 4, replace .095 km with 0.95 km
- Page 18: Figure 10.1.2-8, Caption, Line 1 should read: ...  
individual positioned at the depth of the beam plane, from  
muons ...  
  
Line 3 should read: ... downstream from the ...

- Page 35: Par. 3, first listed item should read:  
 $A = V_{air}Re-\lambda t$
- Page 36: Par. 5, Line 3, carbon-45 should read: calcium-45.
- Page 43: Table 10.1.3-2, Soil Dry Range for AZ should read: 1.4-1.9  
 Table 10.1.3-2, Soil Bulk Range for AZ should read: 1.6-2.2
- Page 44: Figure 10.1.3-1, Caption, Line 1 should read: ... an individual continuously located ...
- Page 45: Figure 10.1.3-2 abscissa (x-axis) should be labeled: Equivalent Depth (m)  
 Text under figure should be replaced by:  
 An annual dose equivalent for an individual continuously located at the surface above the beam absorber at an equivalent depth (density adjusted) of 14 m is 0.001 mrem. An annual dose equivalent at each of the six sites is less than 0.001 mrem because the equivalent depth is greater than 14 m.
- |                |           |
|----------------|-----------|
| Colorado       | 28 m eq.  |
| Illinois       | 129 m eq. |
| Michigan       | 43 m eq.  |
| North Carolina | 26 m eq.  |
| Tennessee      | 99 m eq.  |
| Texas          | 24 m eq.  |
- Page 49: Figure 10.1.3-4, abscissa (x-axis) should be labeled: Radius (m)
- Page 50: Figure 10.1.3-5 abscissa (x-axis) should be labeled: Equivalent Depth (m)

Page 50: Text under figure should be replaced by:  
(Cont)

Dose equivalent for an individual located at the surface above the loss point at an equivalent depth (density adjusted) of 12 m is 0.001 mrem. The dose equivalent at each of the three sites is less than 0.001 mrem because the equivalent depth is greater than 12 m.

Illinois	88 m eq.
Michigan	24 m eq.
Tennessee	117 m eq.

For North Carolina the dose equivalent is 0.006 mrem for an equivalent depth of 11 m.

Page 52: Table 10.1.3-4, Surface above loss point mrem for NC should read: 0.006

Page 53: Par. 1, Line 6 should read: plane as determined at the boundary of the controlled zone. Because the muon beam

Page 54: Figure 10.1.3-7, Caption should read: Annual dose equivalent in mrem at the depth of the beam plane as determined at the boundary of the controlled area downstream from the beam absorber.

Page 55: Figure 10.1.3-8, Caption should read: Annual dose equivalent in mrem at the depth of the beam plane as determined at the boundary of the controlled area downstream from the beam absorber.

Page 56: Figure 10.1.3-9, Caption should read: Annual dose equivalent in mrem at the depth of the beam plane as determined at the boundary of the controlled area downstream from the beam absorber.

Page 57: Figure 10.1.3-10, Caption should read: Annual dose equivalent in mrem at the depth of the beam plane as determined at the boundary of the controlled area downstream from the beam absorber.

Page 58: Figure 10.1.3-11, Caption should read: Annual dose equivalent in mrem at the depth of the beam plane as determined at the boundary of the controlled area downstream from the beam absorber.

Page 59: Figure 10.1.3-12, Caption should read: Annual dose equivalent in mrem at the depth of the beam plane as determined at the boundary of the controlled area downstream from the beam absorber.

Page 60: Table 10.1.3-5, first parameter should read: Depth ft (m)

Page 73: Figure 10.1.3-22, text under figure should be replaced by:

An annual dose equivalent from muons produced by beam scraper for an individual continuously located at the boundary of the controlled zone along a tangent from the point of loss with an equivalent distance (density adjusted) of 6.4 km is 0.001 mrem. An annual dose equivalent at each of the two sites is less than 0.001 mrem because the equivalent distance is greater than 6.4 km.

North Carolina	6.7 km eq.
Tennessee	6.5 km eq.

Page 76: Par. 1, last line should read: ... (NRC 93, 1987).

Page 88: Par. 2, last line, add reference: (DOE Order 5480.1B, Chapter 11). (See also Volume I, Chapter 6, Section 6.3.2 for explanation of status of DOE limits.)

Page 91: Par. 1, second activity should read: ...  $A(\text{Na-22}) = 2.4 \times 10^9 \text{ pCi}$  ( $8.9 \times 10^7 \text{ Bq}$ ).

Page 97: Par. 5, last line, reference should read: (Metropolis 1987)

Page 100: Par. 1, last line, add reference: (10 CFR 61; 42 USC 2021b).

Par. 2, last sentence should read: Disposal at a regional compact LLRW waste disposal facility licensed by a State and/or the NRC remains a possible option, except in Michigan, which has passed legislation prohibiting the disposal of SSC-generated LLRW.

Between Pars. 2 and 3, delete the subheading: a. Volume

Last paragraph, second-to-last line, insert the following after the word requirements: and applicable NRC or DOE radiation protection regulations

Page 101: Table 10.1.3-16, Planned Site Location for Illinois should read: Not yet located

Page 104: Table 10.1.3-18, insert additional footnote:

3. Based on potential location in Clark County. (footnote refers to the Illinois entry for Estimated total distance to regional compact)

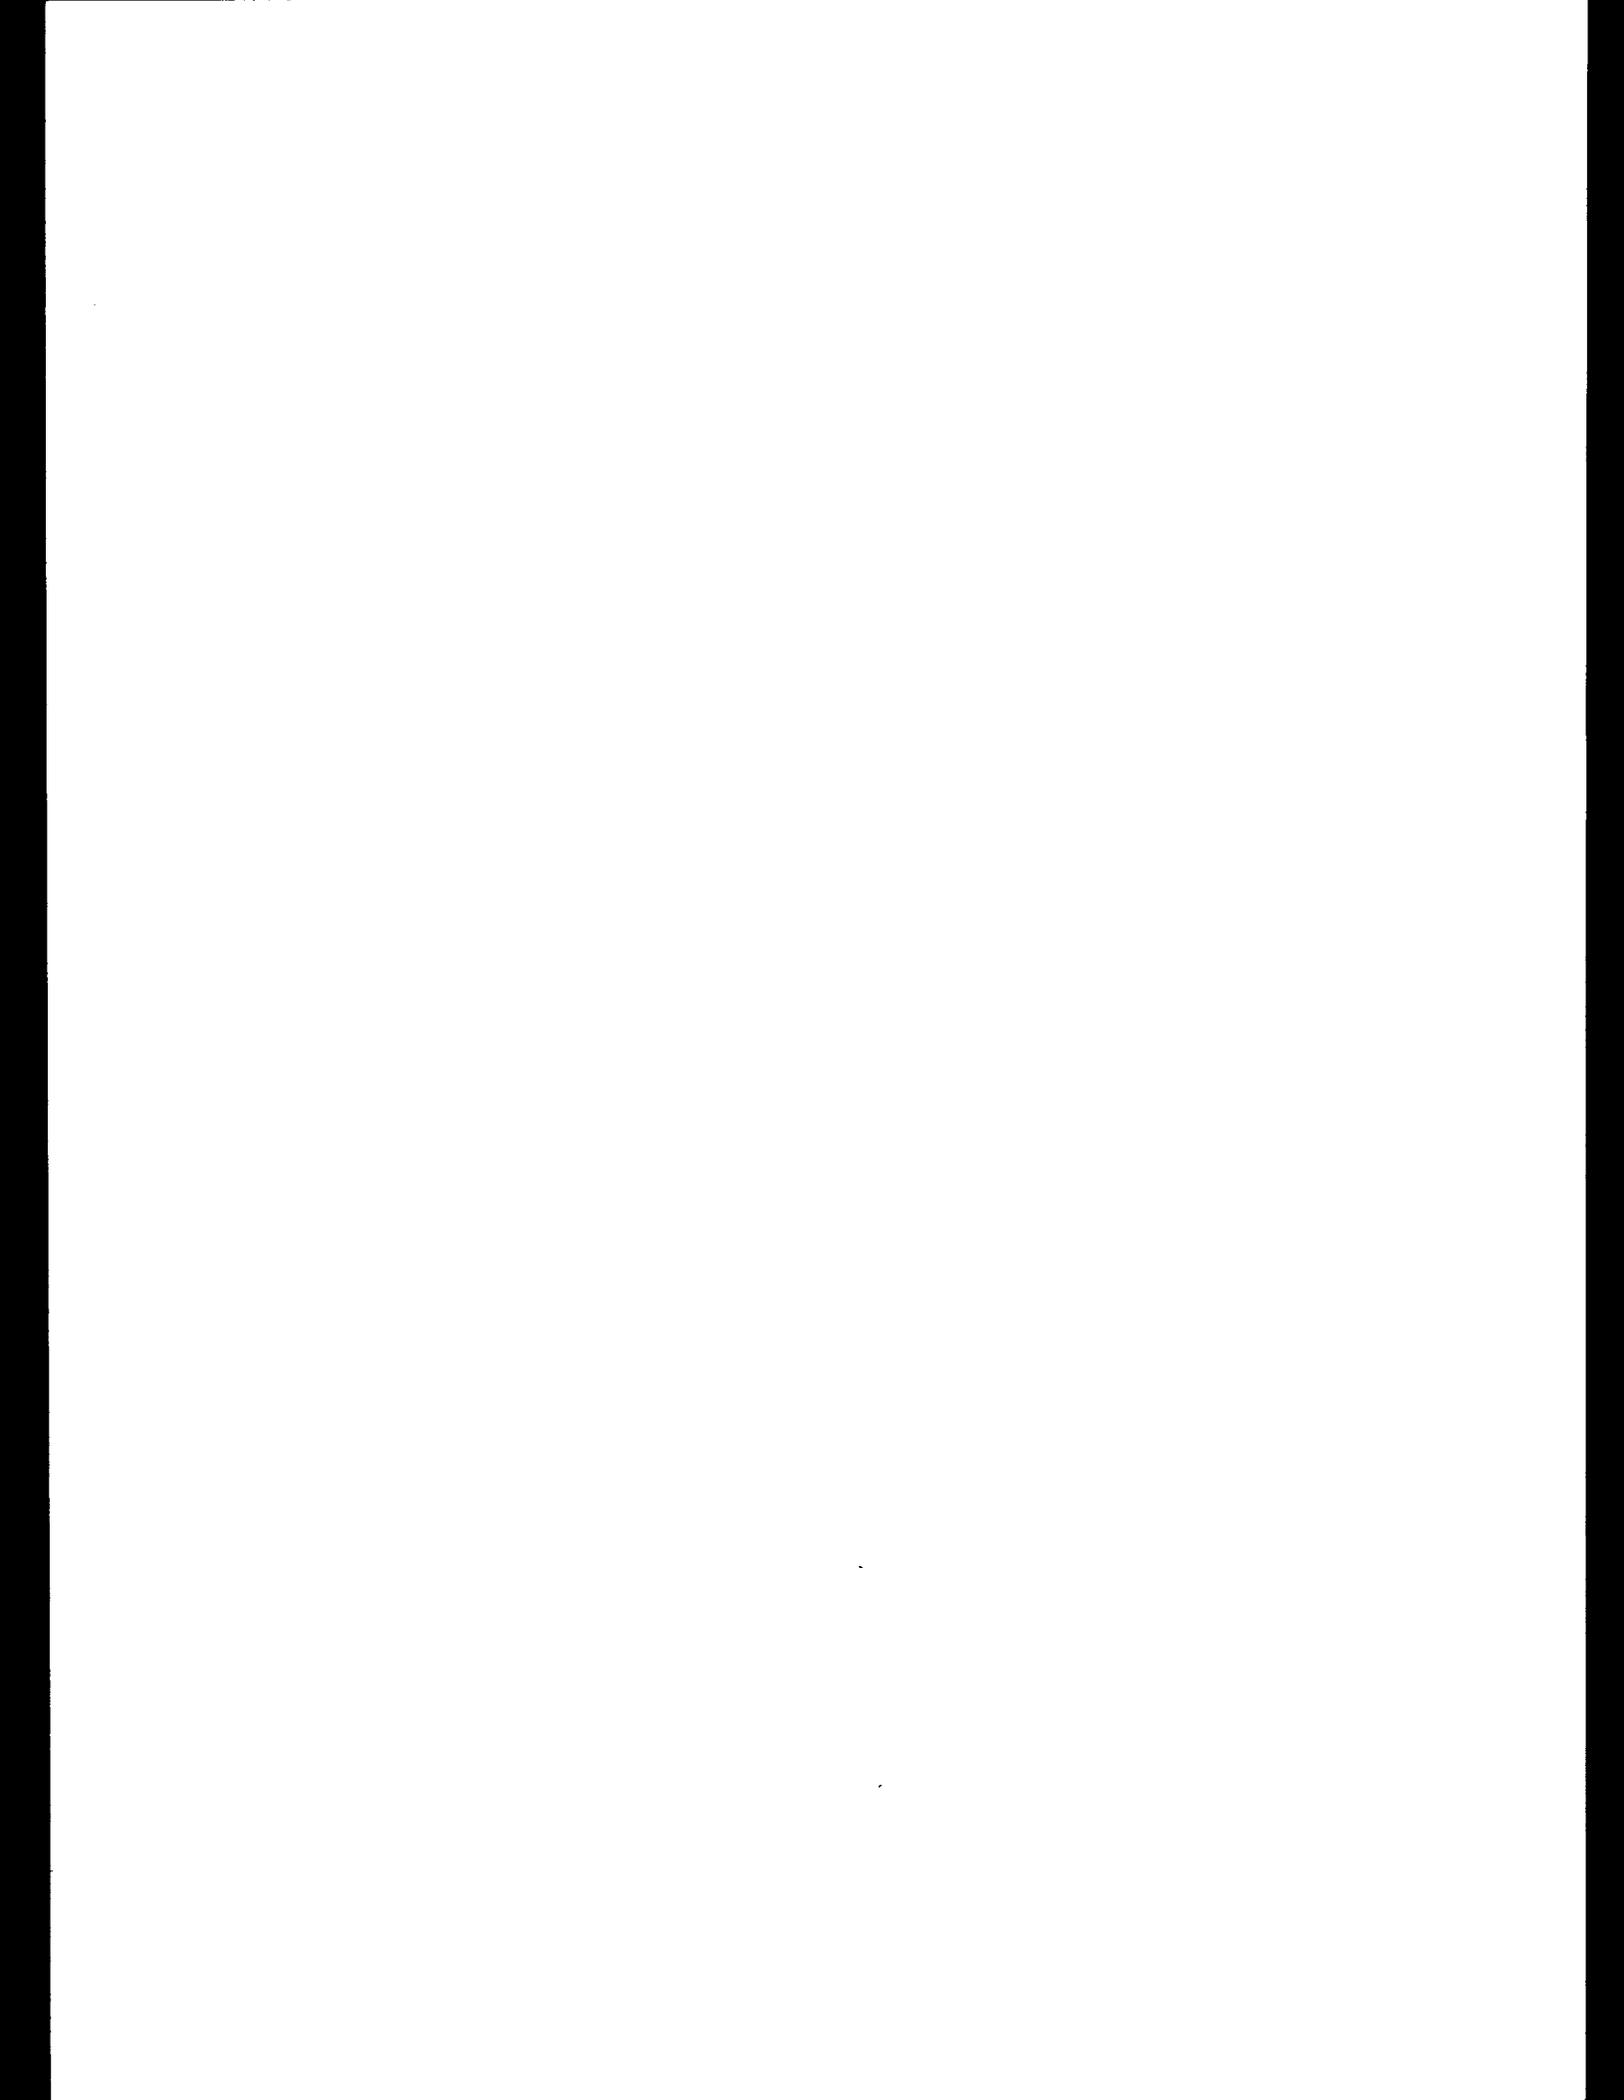

Page 108: Par. 4, Line 1 should read: With the exception of the Arizona and Texas sites, naturally occurring ...

Errata and Revisions  
Hazardous Source Terms and Waste Disposition  
Radiation and Hazardous/Toxic Source Terms

Page 108  
(Cont)

Insert the following paragraph after Par. 4:

The proposed Texas site contains infestations of the imported fire ant, Solenopsis sp., which defends its habitats by attacking anything that disturbs it (TDA 1986). The effects of stings on humans can range from painful blisters to allergic reactions (anaphylactic shock). The extent of the infestation within the proposed SSC footprint has not been determined, but the fire ant is common in the eastern portion of Texas and residents near the proposed site have indicated severe problems with the ants. The severity of the hazard will depend on the density of the fire ant population in those areas of the proposed SSC footprint that will be disturbed by construction and operation activities, and on the effectiveness of any control measures used to combat the fire ant problem. If the SSC is sited in Texas, a soil survey would be needed prior to the start of construction to determine the location and extent of fire ant infestation. Potential control methods could then be evaluated.

## 10.2 EXCAVATED MATERIAL AND DEWATERING WASTE DISPOSAL

- Page 3: First paragraph, second sentence should read: About 288 truckloads per day would be required for a maximum of six TBM contractors operating simultaneously.
- Same paragraph, delete third sentence, which begins:  
However,
- Page 4: Table 10.2.3-1, first State Proposed Option, substitute 480 for 450
- Page 7: Par. 2, Par. 1, Line 13, first entry should read K6 instead of D6
- Page 8: Par. 4, Line 4, reference should read: (Coughlin 1985)
- Page 13: Par. 3, add sentence to end of paragraph:  
  
However, more sites are available for use if the need warrants more than the primary four that are currently designated.
- Par. 5, Line 2, replace the word would with could; Line 5, replace 290 with 144; replace 6 with 3; Lines 5 and 16, delete parenthetical remark; Line 6, replace 190 with 326; Line 7, replace four shafts with six shafts
- Page 14: Insert the following at the beginning of last paragraph:  
  
It is estimated that the water infiltration during tunnel construction at the Illinois site would be 0-10 gal/min/100 ft of tunnel length.
- Page 16: Par. 1 should read:  
  
It is estimated that about 19 lined ponds would be about 0.30 acre (about 500,000 gal) each. At shaft location F3, larger ponds (three ponds, each 2 acres), would be required because higher infiltration (up to 700 gal/min compared to 100 gal/min between shafts F1 and E3 and shafts E4 and E10) may occur between tunnel locations E3 and E4. A pond might not be required for the tunnel between F1 and E10 (west side of the campus), which is expected to be dry.

Page 16:  
(Ccnt)

Insert after Par. 1:

If measurable oil and grease from the boring operations are in the water, a separator would be employed prior to discharge to the retention ponds. Some of the water in these ponds will infiltrate into the ground. After sufficient settling time for the sediments, some water may be used for construction of the project (e.g., dust control) and the rest discharged to surface waters. Additional treatment, such as filtration, may be necessary to minimize water quality impacts on the receiving surface waters.

Par. 3, end of Line 7 should read: ... sulfur in coal (1 to 4 percent ...

Page 17:

Table 10.2.3-4, the Dewatering Infiltration Rate should read: <1 to 20 instead of 5-25

Page 18:

Par. 2, Line 2 should read: ... (<1 to 20 gal/min/100 ft ...

Par. 2, Line 4, delete: It is is planned that. End of Par. add: The number of ponds would be determined during the detail design. It is estimated that the total area required for holding ponds could be about five acres.

Page 21:

Table 10.2.3-6, State-proposed option number 1, Line 2 should read: 14 sites-15 acres; Line 3 should read: ... 3 to 5 acre cleared area (this refers to the 2 sites of 20 to 30 acres only

Page 24:

Table 10.2.3-7 (Cont), Current Proposed Disposal Site Status for E8 should read: 3 acres

Page 25:

Par. 2, insert the following at beginning of paragraph:

It is estimated that the water infiltration during tunnel construction at the North Carolina site would be 5-15 gal/min/100 ft of tunnel length.

Page 26:

Table 10.2.3-8, State-proposed option number 3, replace the number 35 with the number 34

Par. 1, delete last sentence and add: The State has proposed five commercial limestone rock quarries for the disposal of the excavated limestone.

Par. 2, Line 7, replace the number 35 with 34;

Page 26: Add to the end of Par. 2:  
(Cont)

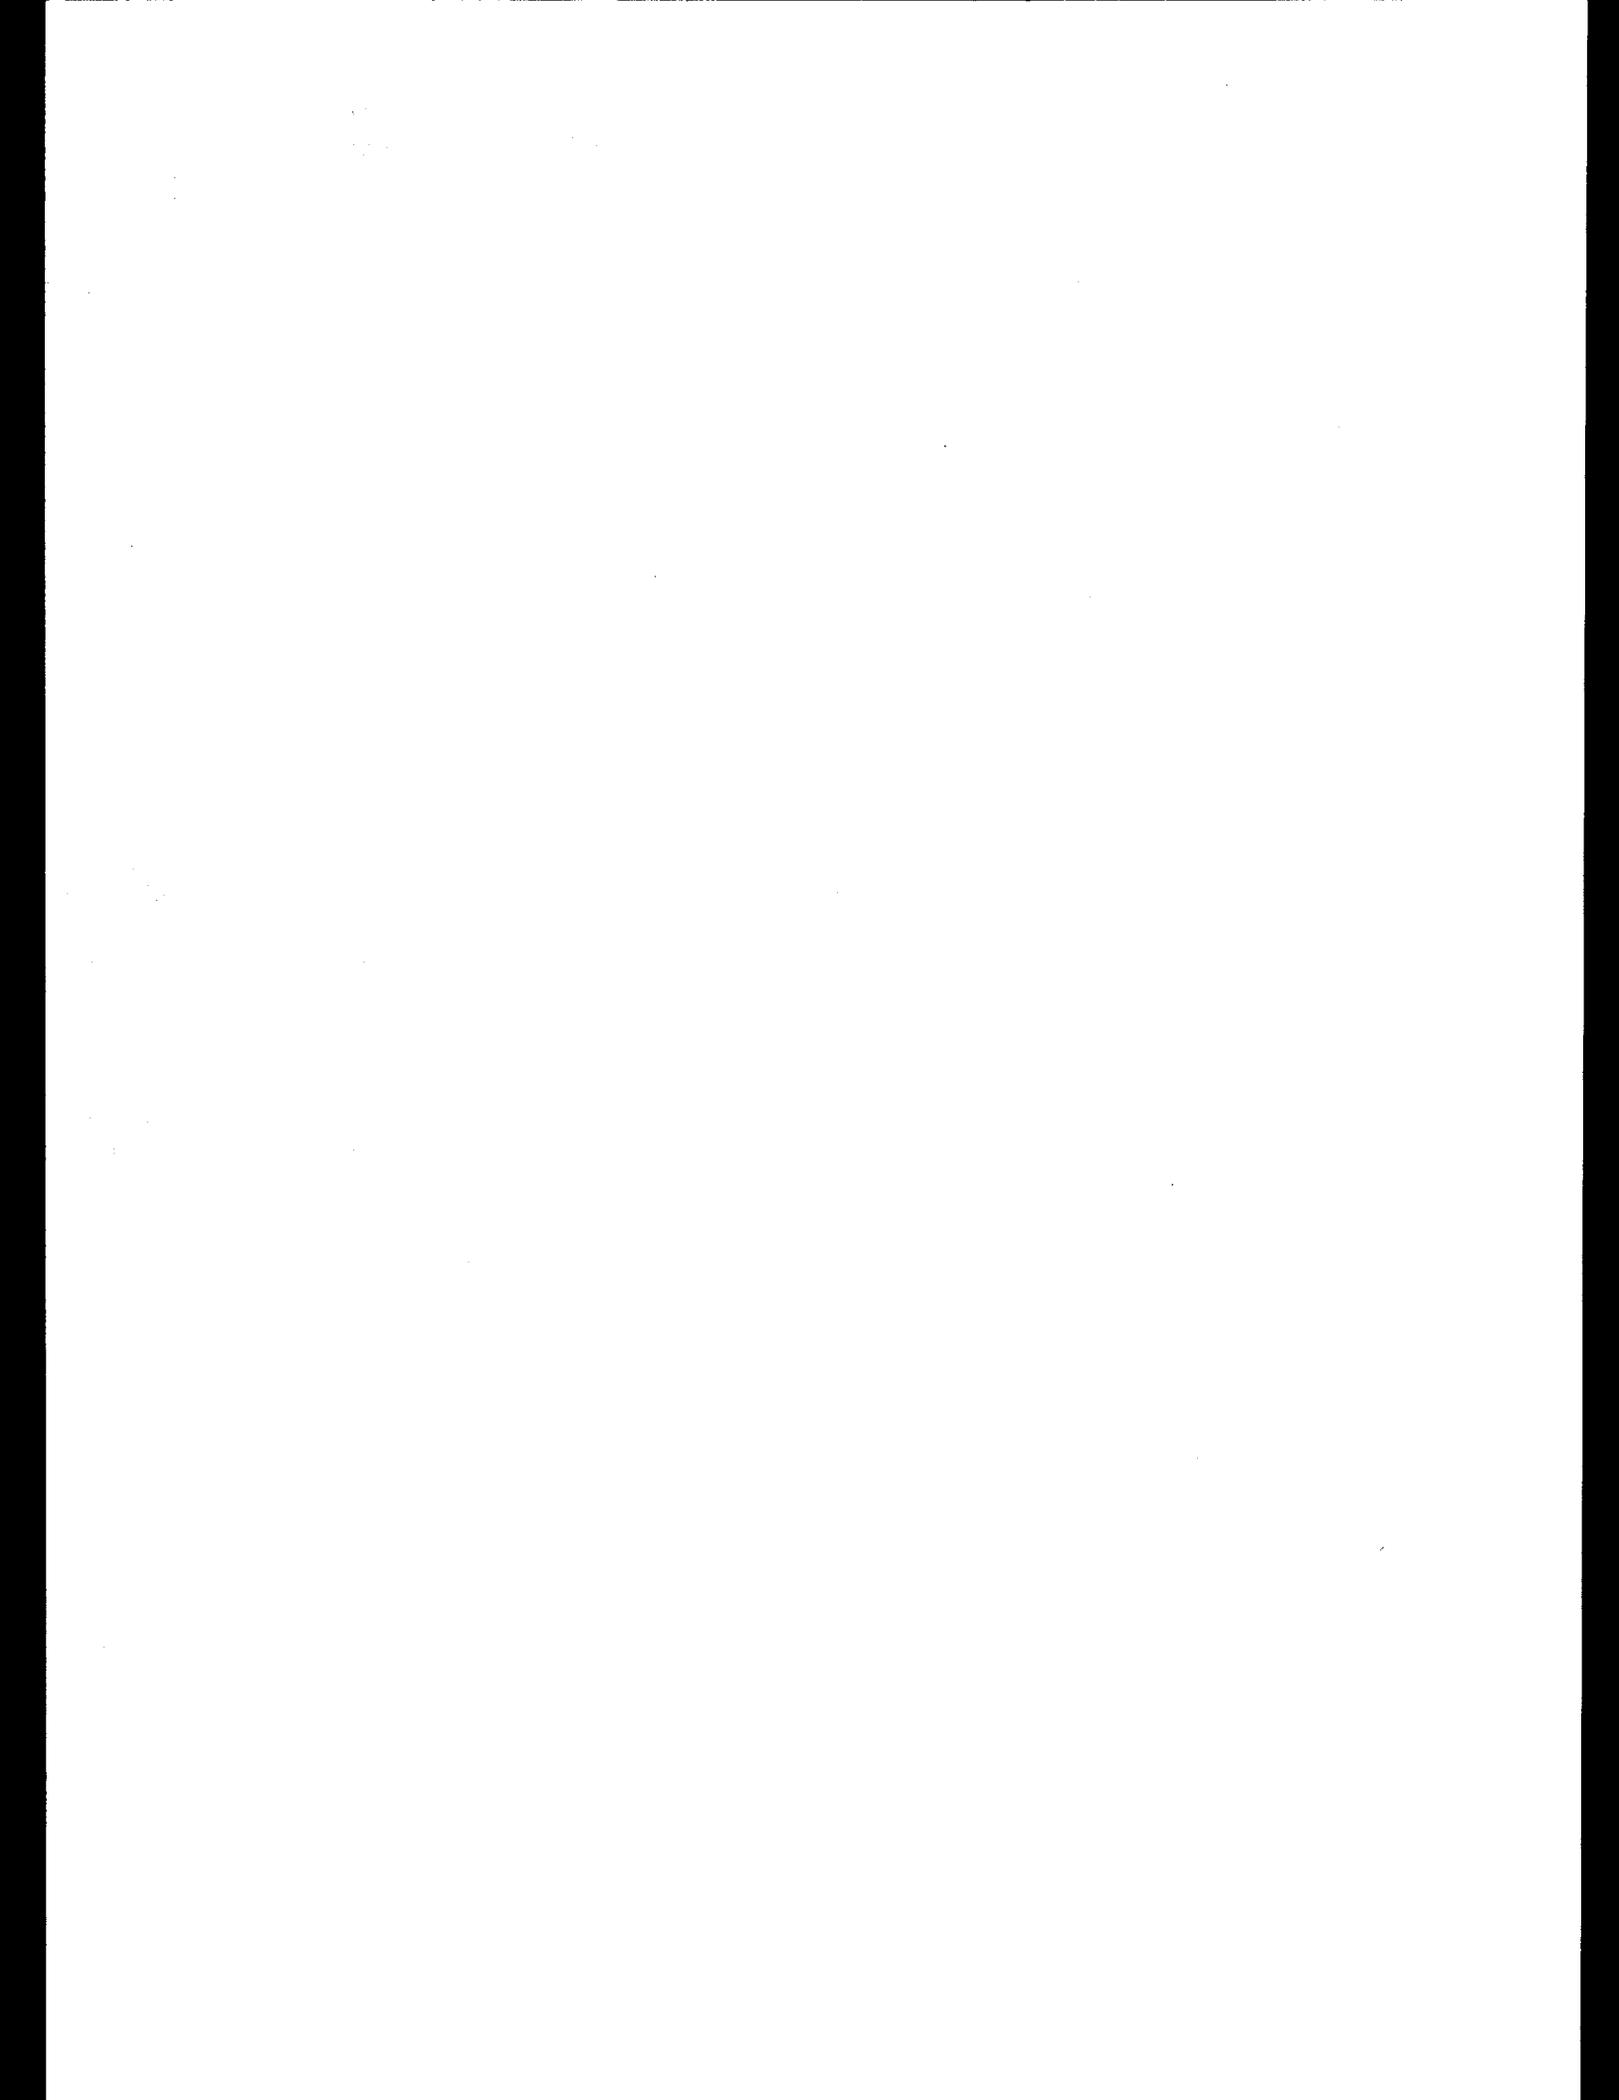

At each disposal site, the topsoil could be removed and stockpiled on the site and later used to cover the excavated material. The disposal sites could then be revegetated. The excavated materials could be sprayed with water to prevent dusting.

Page 28: Par. 5, Line 1, delete: (1,800,000 yd<sup>3</sup>)

Page 29: Table 10.2.3-9, State-proposed option number 4, replace the number 45 with 65

Page 31: Par. 2, Line 2, replace the number 45 with 65

Par. 2, replace Lines 3 and 4 with: ... be required to dispose of marl and low-quality Austin chalk.

Errata and Revisions  
Hazardous Source Terms and Waste Disposition  
Sewage, Solid Waste, and Cooling Tower Blowdown

**10.3 Sewage, Solid Waste, and Cooling Tower Blowdown**

- Page 1:** Par. 1, Lines 1 and 2, Replace Industrial Wastewater with Cooling Tower Blowdown; delete last sentence
- Par. 3, Line 2, replace Industrial Wastewater with Cooling Tower Blowdown
- Par. 3, Line 5, replace Industrial Wastewater with Cooling Tower Blowdown
- Par. 4, Line 1, replace Industrial Wastewater with Cooling Tower Blowdown
- Page 2:** Par. 5, Line 5, place a period after the acronym (DEQ) and delete the rest of the paragraph; also in Line 5, add the following before the word Arizona: The method of sewage treatment proposed by the State of Arizona is acceptable to the ...
- Insert new paragraph between paragraphs 5 and 6: As per ISP Attachment I, primary, secondary, and tertiary treatment plants would be provided at the main campus.
- Page 3:** Table 10.3.3-1, first item right column delete operating
- Page 4:** Par. 3 should read:
- For the far cluster area, including experimental areas, service area F5, and the emergency services building, the State has proposed septic tanks and leach fields to dispose of wastewater generated at the remote areas.
- Page 5:** Table 10.3.3-2, the State-Proposed Alternative for both the Far Cluster and Remote Areas should read: Septic tanks and leach field
- Page 7:** Delete last paragraph and replace with the following:
- For the far cluster, including experimental areas, service for F5, and emergency service building, the State of North Carolina has proposed four options:
- Wastewater from area K3: Treatment in a stabilization lagoon with storage, followed by land application through spray irrigation.
- Wastewater from areas K4 and K5: Same as option for K3, but with septic tank system treatment followed by a subsurface absorption field.

Page 7:  
(Cont) Wastewater from area K6: Same as options for K3 and K4 and K5, but with the possibility of package plant treatment followed by surface discharge into a nearby stream.

The cooling tower blowdown (300 gal/min) could be disposed of by using a vacuum compression brine concentrator or by side-stream softening. The method for the treatment of cooling tower blowdown would be selected after the site selection and during the detail design phase. Surface discharge of cooling tower blowdown would not be acceptable to the regulatory agencies.

Page 10: Delete existing text before heading 2. Assumptions

Page 14: Par. 1, Line 3, after has, substitute for remainder of sentence: ... suggested that on-site municipal solid waste landfill would be possible to permit and is an available option

Page 15: Par. 5, Section F, Tennessee, add new last sentence: The State has recommended that waste paper could be source separated and recycled.

Section 10.3.3 heading should read: Cooling Tower Blowdown

Insert the following directly before heading A. Arizona:

As a result of Fermilab experience (Baker 1979) it would not be necessary to use chromates as corrosion inhibitors in SSC cooling systems since effective biodegradable treatments are available (Baker 1987b).

Last line, replace Industrial Wastewater with Cooling Tower Blowdown

- Page 84:** Par. 1, last line, add reference: (Leathers 1982)
- Insert the following after the first paragraph:

Page 84: At the Texas site, construction workers may encounter the  
(Cont) imported fire ant, Solenopsis sp. This stinging insect is found throughout the area of the proposed Texas site and could present a health hazard if workers should inadvertently disturb a fire ant colony (mound). Each fire ant can sting a person several times before the person is able to remove the ant. Since hundreds of ants can rush out of a mound and climb onto a person before the individual can evade the ants, it is possible for a person to receive many stings (TDA 1986). A fire ant sting is painful at first, then the affected area reddens, swells into a wheal, and a pustule forms within a day. These pustules may become infected and require medical attention. For most people, the pustule dries up in about a week, but for some the result may be a brown scar that lasts for months. For a very few people who are sensitive to the protein that is in the fire ant venom, a sting can lead to anaphylactic shock. The symptoms of the shock include dizziness, nausea, sweating, swelling of the affected area, headache and shortness of breath. If any of these symptoms occur after a sting, the person must receive immediate medical attention since anaphylactic shock can lead to death (TDA 1986).

It is not possible at this time to project the degree of risk to workers on the SSC project or the number of workers who might be impacted. That would depend on the concentration of fire ants in the SSC work areas, the probability of worker contact with the ants, the mitigative measures that might be used to minimize the fire ant problem and the individual sensitivities of the workers to the fire ant venom.

Page 87: Table 12.4.1-2, Eq. depth for IL should read: 88; note should read: Based on beam loss from upper beam tube positioned at 1A above tunnel centerline and reference soil density of 2.24 g/cm<sup>3</sup>

Line 11, change 1.25% of 4 mrem... to 12.5% of 4 mrem...

Page 99: Par. 4 should read:

In the transportation of LLRW, the RADTRAN program calculated the total annual expected values of exposure dose in units of person-rem per year and the annual risk factors for the total latent cancer fatalities and the total genetic effects. The risk factor is expressed as a fraction. RADTRAN calculated also the expected annual accidents for all shipments traveling in rural, suburban, and urban areas. The expected annual probability was expressed as a fraction. All the values are shown in Table 12.4.1-3. The uncertainty for the risk factor is approximately one order of magnitude. The correspondence between the exposure dose equivalent and the risk factor is approximately 1 person-rem to one in ten thousand for the risk factor.

# **ERRATA AND REVISIONS**

## **APPENDIX 13**

### **LAND RESOURCES ASSESSMENTS**

## LAND RESOURCES ASSESSMENTS

Page 16: Insert the following paragraph directly before Subsection D.:

Semi-Primitive, Nonmotorized Recreation Opportunity Class:

The Experience Opportunity is defined as follows: Some opportunity for isolation from the sights and sounds of man, but not as important as for primitive opportunities. Opportunity to have high degree of interaction with the natural environment, to have moderate challenge and risk, and to use outdoor skills. The Setting Opportunity is defined as follows: Area is characterized by a predominantly unmodified natural environment of moderate to large size. Concentration of users is low, but there is often evidence of other area users. On-site controls and restrictions may be present, but are subtle. Facilities are provided for the protection of resource values and the safety of users only. Spacing of groups may be formalized to disperse use and limit contacts between groups. Motorized use is not permitted. The Activity Opportunity is defined as follows: camping, hiking, climbing, enjoying scenery or natural features, nature study, photography, spelunking, hunting (big game, small game, upland birds, waterfowl), ski touring and snowshoeing, swimming, diving (skin and scuba), fishing, canoeing, sailing, and river running (nonmotorized craft).

Page 18: Par. 2 should read:

SSC project development will, undoubtedly, create more demand for and pressure on existing recreational and wilderness resources in southwestern Maricopa County. This is of major concern to the Bureau of Land Management, which is the dominant land manager in the area. SSC project development will change recreation opportunities in areas affected by direct and indirect project development. The changes in recreation settings and opportunities will cause a shift in classification of impacted area from the present "Semi-Primitive, Nonmotorized Recreation (Class II ROS)" and "Semi-Primitive, Motorized Recreation (Class III ROS)" opportunity settings to the "Roaded, Natural Recreation (Class IV ROS)" opportunity setting, as a result of applying the BLM Recreation Opportunity Spectrum (ROS) methodology to the SSC project. These shifts in recreation opportunity would represent a one- or two-step change towards "Modern Urban" forms of recreation opportunities. In areas affected by the project ring, structures, and roads, recreation opportunities dependent on unroaded and natural landscapes would decline and be supplanted by vehicle-dependent types of recreation activity. All three BLM Wilderness Study Areas, i.e., North Maricopa Mountains (AZ-020-157), South Maricopa Mountains (AZ-020-163), and Butterfield Stage Memorial (AZ-020-164) will experience impacts as a result of SSC project development. These impacts are discussed briefly below.

Page 18: Par. 3, insert the following directly before the last sentence:  
(Cont) This indirect loss of wilderness character is estimated as follows: North Maricopa Mountains WSA: 5,650 acres or roughly 7 percent of the subject WSA; South Maricopa Mountains WSA: 2,000 acres or roughly 3 percent of the subject WSA; and Butterfield Stage Memorial WSA: 3,150 acres or roughly 33 percent of the subject WSA.

Last paragraph, delete last sentence, insert the following: SSC project development will traverse three BLM grazing allotments: approximately two-thirds of the northwest and southwest quadrants of the collider arc region will include a portion of the Bighorn Allotment; the remaining one-third of the collider arc region, i.e., along the northeast quadrant and the north half of the southeast quadrant, are located in the Conley Allotment, while the remainder of the southeast quadrant is situated within the Lower Vekol Allotment. The north half of Campus Area A is located within the Conley Allotment, while the southern half of the campus area is situated in the Lower Vekol Allotment. In addition, the Reloat Allotment may be affected by the construction of the expressway spur from Goodyear to Interstate 8, and the South Vekol Allotment may become impacted by groundwater drawdown caused by the pumping of the Vekol Valley well field.

Although no reduction in grazing capacity is expected in these allotments due to the SSC project, construction and other activities associated with a project of this magnitude usually result in inconvenience to grazing operators. This includes occurrences of cut fences, gates left open, livestock loss from road kills, and increased vandalism due to greater accessibility. Also, the fencing of newly constructed roads and facilities can create obstacles in established livestock grazing patterns. For example, single management units may become split into several units, or water sources could become isolated from open range areas.

Page 46: Insert the following between Pars. 1 and 2:

The DOE recognizes that there may be State laws which define prime, unique, and important farmland differently. For the sake of consistency in comparing the seven proposed sites the Federal definition was used to estimate and evaluate acreages; compliance with state law would occur after site selection.

**Page 48:** Delete Sections C.1 and C.2 and insert the following:

1. Temporal

The impact of removal of important farmlands from agricultural production was assessed by separately calculating acreages permanently and temporarily removed.

The permanently removed important farmland is defined as land occupied by SSC facilities, land covered by roads constructed in conjunction with the SSC project, or SSC-related waste disposal sites.

The temporarily removed important farmland is defined as land that is superficially disturbed during facilities and roads construction and is rehabilitated and returned to the original condition.

2. Spatial

The affected prime and unique farmland was determined for all areas temporarily disturbed during construction and permanently during operation.

**Page 49:** Insert the following paragraph at the end of Section 13.2.2.3:

Soil maps (Figures 13-1 through 13-21) used for this analysis are included at the end of this appendix. Since the U.S. Department of Agriculture/Soil Conservation Service reported zero acres of farmland in Arizona, there are no soil maps for the proposed Arizona site.

**Page 50:** Delete all text and insert the following under 13.2.3.1:

There is no prime and important farmland reported by the Soil Conservation Service at the proposed Arizona site.

Delete Table 13-8; new Table 13-8 appears in the New and Corrected Tables section.

**Page 52:** Delete all text and insert the following under 13.2.3.2:

The Colorado Soil Conservation Service reported no prime farmland and 4,198 acres of important farmland at the proposed site. An estimated 819 acres of important farmland would be permanently converted and 1,129 acres would be temporarily disturbed by the SSC project.

**Pages**

**53-54:** Delete Table 13-9; new Table 13-9 appears in the New and Corrected Tables section.

**Page 55:** Delete all text and insert the following under 13.2.3.3:

The Illinois Soil Conservation Service reported 3,076 acres of prime farmland and 212 acres of important farmland at the proposed site. An estimated 197 acres of prime and important farmland would be permanently converted and 231 acres would be temporarily disturbed by the SSC project. No prime and important farmland would be converted by spoils disposal because use of quarries and recycling is the proposed disposition for these tunnel excavations.

**Page 56:** Delete Table 13-10; new Table 13-10 appears in the New and Corrected Tables section.

**Page 57:** Delete all text and insert the following under 13.2.3.4:

The Michigan Soil Conservation Service reported 4,002 acres of prime farmland and 2,658 acres of important farmland at the proposed site. An estimated 341 acres of prime and important farmland would be permanently converted and 576 acres temporarily disturbed by the SSC project.

**Pages**

**58-59:** Delete Table 13-11

**Page 60:** Delete all text and insert the following under 13.2.3.5: The North Carolina Soil Conservation Service reported 4,374 acres of prime farmland and 2,265 acres of important farmland at the proposed site. An estimated 955 acres of prime and important farmland would be permanently converted and 696 acres temporarily disturbed by the SSC project.

**Pages**

**61-62:** Delete Table 13-12

**Page 63:** Delete all text and insert the following under 13.2.3.6:

The Tennessee Soil Conservation Service reported 4,000 acres of prime farmland at the proposed site. Information on important farmland was not provided; an estimate was calculated at 1,839 acres using soil maps available for two-thirds of the counties affected. Based on this rough calculation, an estimated 606 acres of prime and important farmland would be permanently converted and 498 acres temporarily disturbed by the SSC project.

**Pages**

**64-65:** Delete Table 13-13

**Page 66:** Delete all text and insert the following under 13.2.3.7:

The Texas Soil Conservation Service reported 3,389 acres of prime farmland and 1,287 acres of important farmland at the proposed site. An estimated 588 acres of prime and important farmland would be permanently converted and 406 acres temporarily disturbed by the SSC project.

**Page 67:** Delete Table 13-14

**Page 68:** Replace Par. 2 with the following:

The U.S. Department of Agriculture/Soil Conservation Service has estimated the prime and important farmland in the fee simple area of each proposed site. They also provided the DOE with estimates of the total prime and important farmland inventories for the counties that would be affected by the SSC project siting.

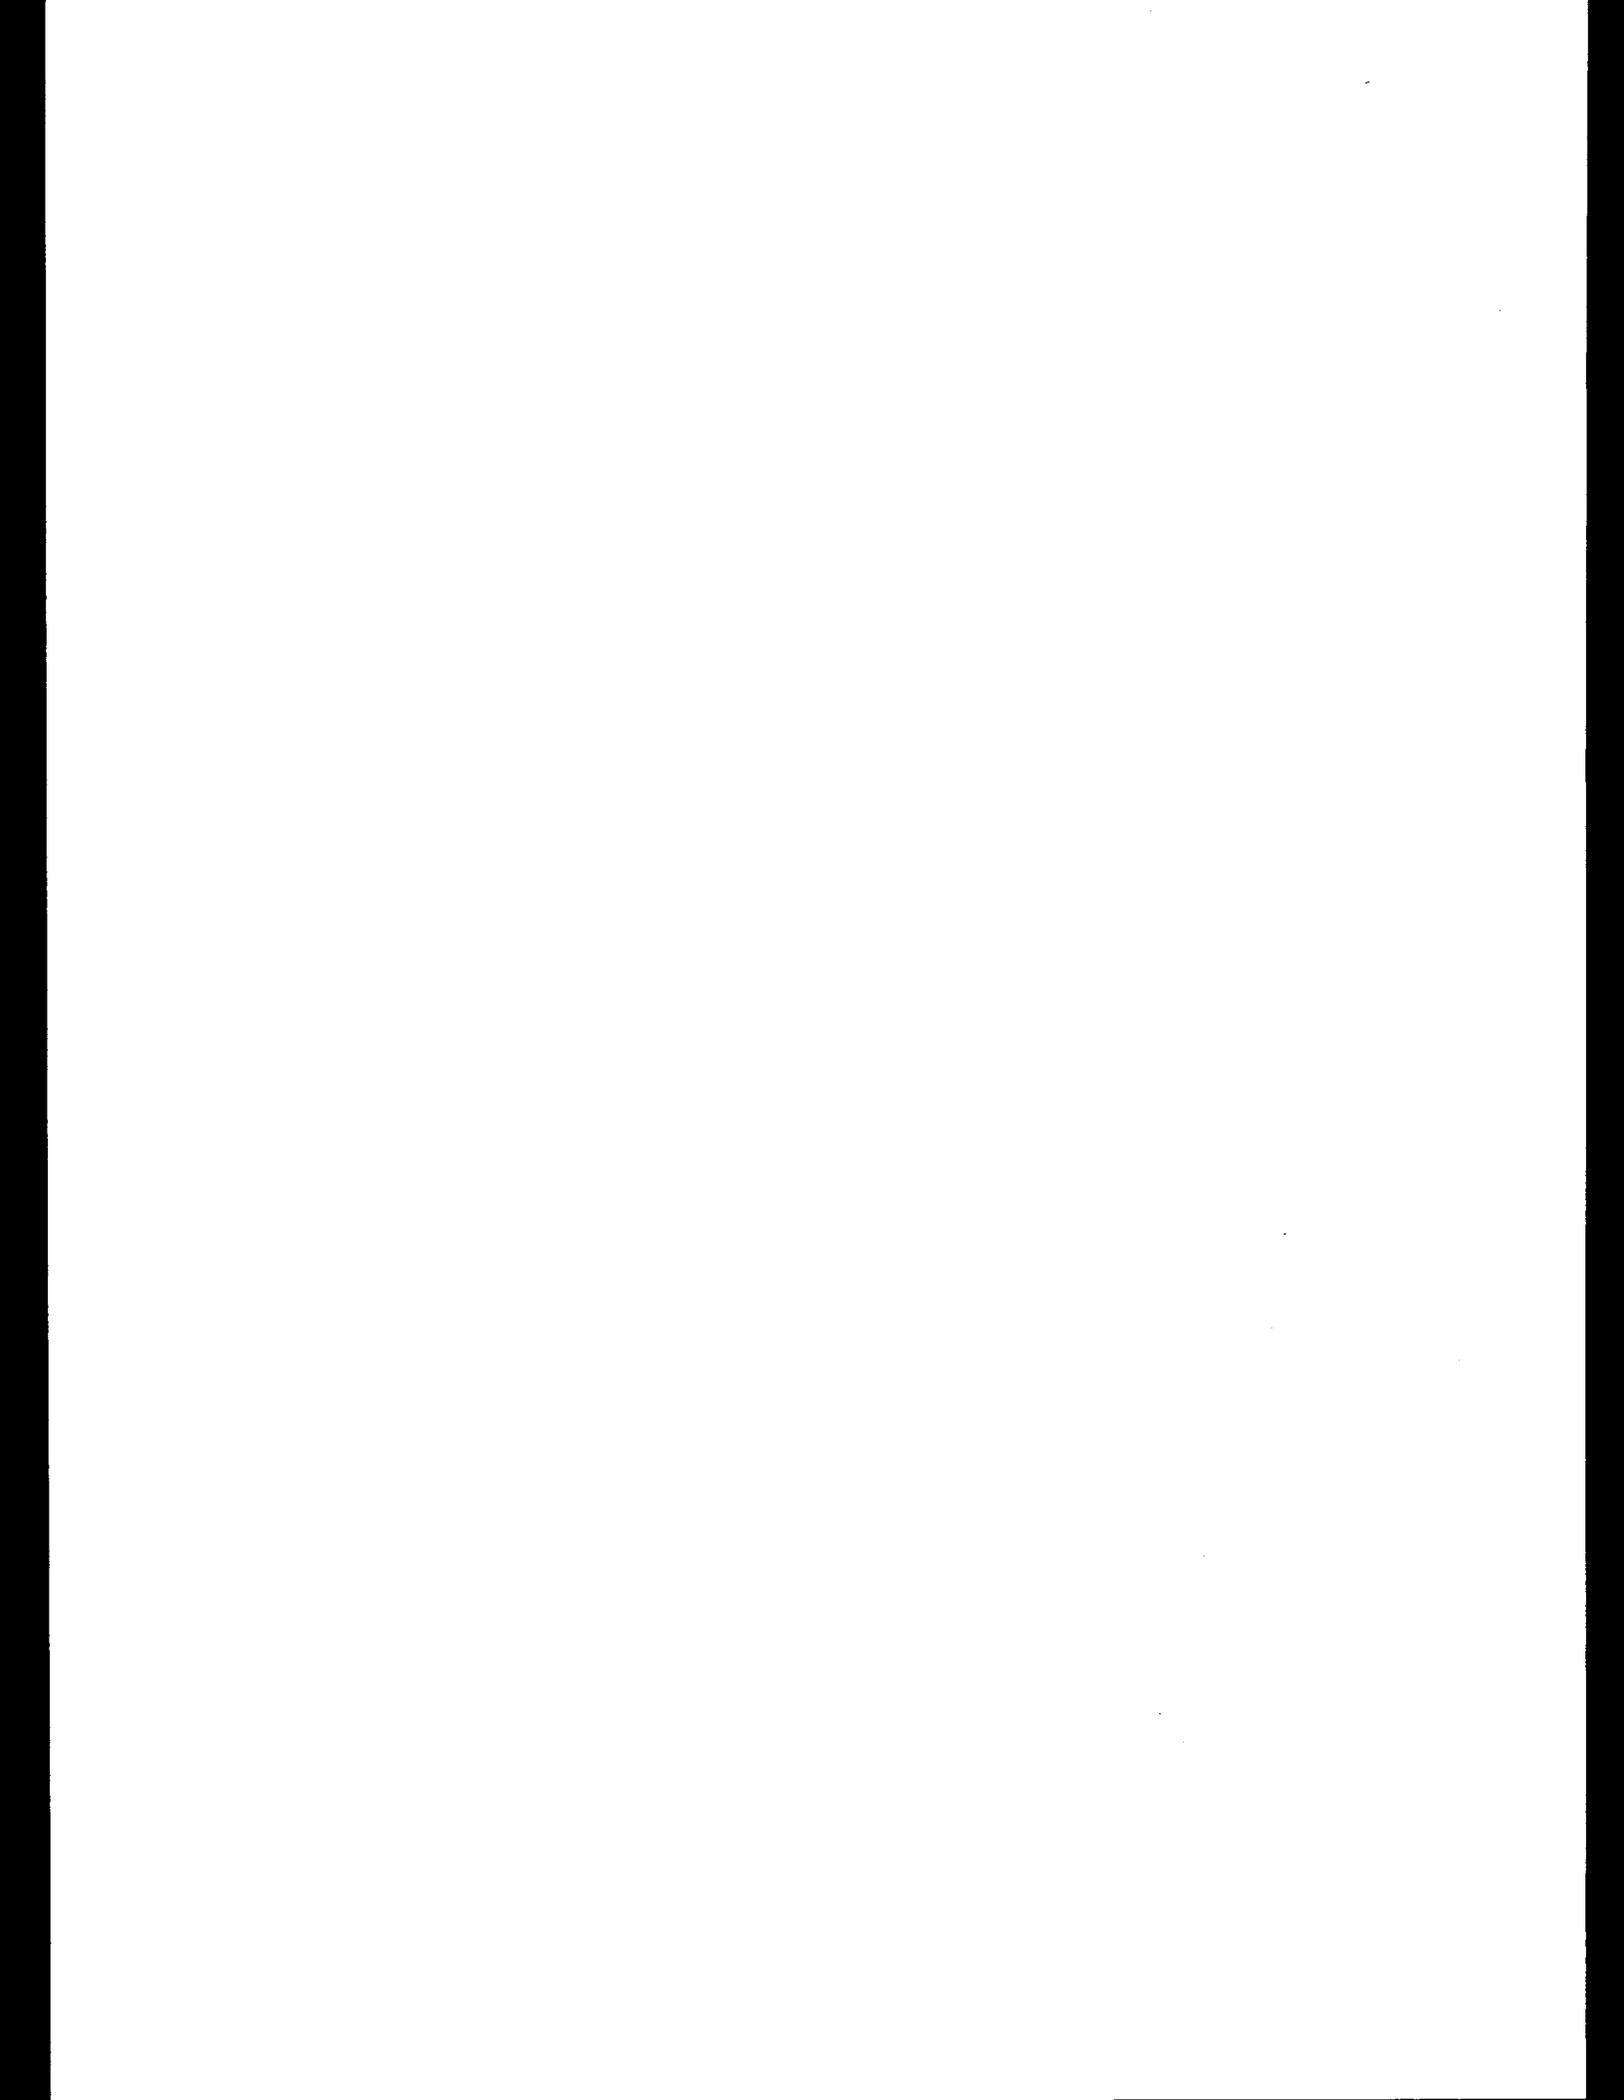

Insert the following sentence at the beginning of Par. 3: Table 13-10 lists the total prime and important farmland acreage in the counties where the SSC ring would be sited. It compares the prime and important farmland that would be permanently removed from production by the project, and gives the ratio of the removed acreage and the total prime and important inventory in the involved counties.

**Page 69:** Delete Table 13-15

## SOCIOECONOMIC AND INFRASTRUCTURE ASSESSMENTS

### 14.1 SOCIOECONOMIC ASSESSMENTS

- Throughout:** Wherever U.S. Bureau of the Census appears as a reference citation, replace with U.S. Department of Commerce, Bureau of the Census
- Wherever Center for Governmental Studies 1987 appears as a reference citation, change to Northern Illinois University
- Page 4:** Par. 5, Line 4, reference should read: (Northern Illinois University 1987)
- Page 9:** Par. 2, last line, add the following reference: (U.S. Department of Commerce 1982a, 1987a)
- Page 15:** Par. 6, Line 3, delete RIMS-II from reference and substitute: U.S. Department of Commerce, Bureau of Economic Analysis 1986
- Page 18:** Table 14.1.2-6, Arizona data should read: \$20,362; \$18,488; \$9,165; \$29,418; \$23,254; \$30,337; \$32,030; \$26,443; \$13,143; \$15,942; \$17,264; \$22,287
- Table 14.1.2-6, Tennessee data should read: \$18,897; \$5,483; \$8,589; \$27,049; \$19,377; \$24,865; \$30,009; \$24,936; \$12,443; \$18,000; \$17,690; \$19,209
- Table 14.1.2-6 source should read: U.S. Department of Commerce, Bureau of Economic Analysis 1986
- Page 19:** First bulleted item, next-to-last line, reference should read: (U.S. Department of the Army, Corps of Engineers 1981)
- Third bullet, Line 3 should read: force, and inversely with ...
- Fourth bullet, Line 3 should read: ... to in-migrate as an inverse function ...
- Page 23:** Par. 2, Line 9, delete: last word (tax) and insert: levy sales and use taxes on ...
- Third bullet, Line 1 should read: Illinois exempts nonprofit scientific ...
- Page 24:** Table 14.1.2-7, Public Utilities Rate Tax for both Electric Power and Miscellaneous Utilities in North Carolina should read: 3.22 percent; for Electric Power in Tennessee: N/A [5]

Page 24: Table 14.1.2-7, Source [3] should read: Average tax rate on  
(Cont) vehicle leasing costs calculated ...; Source [4], insert  
(except in Illinois) at end of line; Source [5] should read:  
... to be supplied by public agencies ...

Table 14.1.2-7, far left column, fifth main heading should  
read: Indirect Revenue (88 \$)

Page 26: Fourth bullet, replace \$9.6 with \$10.3

Last paragraph, last line should read: data obtained from  
local and state financial documents.

Page 27: Table 14.1.2-8, first column, third item should read:  
Personal Property\*

At the bottom of same table add: \* Average tax rate as a  
percent of SSC leasing costs.

Same table, last data entry for Maricopa Co., AZ should read:  
\$144.45

Page 28: Table 14.1.2-8, Kendall Co. IL column, under Municipal  
(1988\$) replace all \$32.80s with 0.00

Page 29: Table 14.1.2-8, Bedford Co. TN column, fourth and fifth  
entries should read: 25.0 percent and 2.24 percent

Same table, Marshal Co. TN column, fourth and fifth  
entries should read: 25.0 percent and 2.20 percent

Same table, Rutherford Co. TN, fourth and fifth entries  
should read: 25.0 percent and 1.96 percent

Same table, Ellis Co. TX, third and fifth entries should  
read: \$35.8 and \$1.09.

Page 30: Delete first sentence. Paragraph begins with: It was  
assumed ...

Page 31: Last paragraph, Line 1 should read: ... to construct new  
paved access roads; delete second sentence

Page 43: Last paragraph, Lines 9 and 10, delete: associated with the  
high scenario ...

Page 46: Par. 3, Line 7, delete: in the high scenario ...

Page 49: Par. 1, Line 11, insert: c directly after 1987

Page 59: Table 14.1.3.2-1, 1996 column, Morgan County, Jobs should  
read: 1,312

- Page 72:** Par. 2, Line 4, delete: ... high scenario ...  
Last paragraph, beginning of Line 12, replace 1987b with 1987c
- Page 75:** Par. 3, Line 6, insert: d directly after 1982  
Par. 3, Line 6, second reference should read: Federal Home Loan Bank of Topeka 1986  
Par. 3, Line 9, replace 1987b with 1987c
- Page 78:** Par. 1, Line 7, insert: d directly after 1982  
Par. 1, Line 9, replace 1987b with 1987c  
Par. 1, Line 16, replace 1987a with 1987d  
Last paragraph, Line 12, replace 1987b with 1987d
- Page 97:** Table 14.1.3.3-1, Local Govt Net Impact row for DuPage County should read: (\$1.3), (\$2.0), (\$3.9), \$0.8, \$1.6, \$1.8, \$1.5, \$1.3, \$1.2, \$1.5, \$1.7, \$1.7  
Table 14.1.3.3-1, Local Govt Net Impact row for Kane County should read: (\$1.7), (\$3.7), (\$2.3), \$2.8, \$3.9, \$4.1, \$3.3, \$2.8, \$2.6, \$3.2, \$3.5, \$3.6  
Table 14.1.3.3-1 Local Govt Net Impact for Kendall County for 1989-1991 should read: \$0.0, \$0.0, \$0.1; for 1996, 1997 should read: \$0.0, \$0.0

Par. 4, Line 8, reference should read: ... 1987c

Page 263: Par. 1, first sentence should read: The cumulative net fiscal impact to all local government jurisdictions in Ellis County would be negative during the first two years of project activity ...

Direct tax revenue losses would be minimized in 1992, due to personal property tax collections on construction equipment used by SSC contractors. After construction is completed in 1996, however, the net direct revenue impact loss would be \$400,000 annually because of the loss of real property tax collections from land that would be transferred from private to Federal ownership.

**REFERENCES:** All references for Appendix 14 (Sections 14.1 and 14.2) have been corrected and combined as included on the pages "Errata and Revisions--Socioeconomics and Infrastructure Assessments--References," which follow the Infrastructure Assessment errata.

Dear Mr. [Name],

I have received your letter of the 15th and am sorry that I cannot give you a more definite answer at this time.

The matter is being reviewed by the appropriate authorities and I will be in touch with you again as soon as a final decision has been reached.

I am sure that you will understand the need for thoroughness in this process and appreciate the time it takes to reach a fair and equitable conclusion.

Thank you very much for your patience and understanding. I will contact you again once a final decision has been reached.

I am sure that you will understand the need for thoroughness in this process and appreciate the time it takes to reach a fair and equitable conclusion.

Thank you very much for your patience and understanding. I will contact you again once a final decision has been reached.

Willis & Associates, Inc 1987)

Page 97: Par. 3, Line 11, insert the reference citation (Exeter Asso-  
ciates 1988) after 28 percent

Page 98: Par. 2, insert the reference citation (Exeter Associates  
1988) at end of last line

Page 99: Par. 1, delete last sentence

Par. 5 should read: Construction power for structures around  
the ring could be served by placing temporary pole lines from  
nearby existing power lines to provide 480-V construction  
power. The impact would be short term and negligible.

Last paragraph, Line 1, after the acronym (APS), insert the  
following: ... is part of an ...

Same paragraph, Line 2, replace the word serves with the word  
serving

Same paragraph, end of last line, add: (North American Elec-  
tric Reliability Council 1987)

Page 100: End of Par. 2 and Par. 3, add: (APS 1988)

End of Par. 6, Par. 8, and Par. 9, add: (Exeter Associates  
1988)

End of Par. 7, add: (North American Electric Reliability  
Council 1987)

Par. 8, Line 3, replace 4,174 MW with 3,529 MW

Page 101: Add the reference citation (Exeter Associates 1988) in the  
following places: end of all four paragraphs, and as  
replacement for the source listed under the table

Page 102: Table 14.2.2-1, insert the following subheading under the  
title: Under Current Resource Plan Without SSC; insert:  
Source: Exeter Associates 1988.

Page 103: End of Par. 1, add: (North American Electric Reliability  
Council 1987)

End of Par. 2, add: (Exeter Associates 1988)

Page 103: Par. 6, delete paragraph and replace with the following: The  
(Cont) final location of the proposed SSC facility could potentially  
require the relocation of the APS 69-kV distribution line  
presently being constructed along the Maricopa-Gila Bend  
Road. If the relocation is required, interruption of service  
to existing customers would be short term and negligible.

Delete last paragraph

Page 104: Delete the first paragraph and insert the following:

The WSCC transmission systems are adequate to accommodate anticipated firm and most economy energy transfer schedules during the 10-year period (1987-1996). The WSCC includes systems in 13 states, two Canadian provinces and the northern portion of Baja California, Mexico. An issue expected to be of continuing concern during the next 10 years is the effect of heavy economy transfers on bulk electric power system reliability. Over the last few years, reduced gas and oil prices have allowed utilities to generate energy more economically with local gas- and oil-fired units. It is expected that over the long term, the cost differential between gas/oil-fired generating units and other generating resources will increase, thereby exacerbating this problem. Because of the expected increases in economy energy transfers, portions of the regional transmission systems will be loaded to higher levels for sustained periods of time. This mode of operation will pose greater risks to system reliability due to reduced operating margin. This concern is mainly centered on the Pacific intertie connecting Pacific Northwest hydroelectric generation with California utilities. Operating restrictions (defined by nomograms) have been imposed to limit simultaneous imports to California. These operating restrictions are required to assure that acceptable system performance can be maintained in the event of a disturbance. The Arizona/New Mexico area utilities continue to forecast generating capacity levels which are significantly greater than their minimum capacity margins.

End of Par. 3 and Par. 4, add: (El Paso 1987)

Par. 5, Line 5, replace the words campus area with the words near cluster; Line 6, replace the number 9.3 with the number 9

Page 106: End of Par. 1, add: (Mountain States Telephone and Telegraph Company 1987)

Page 108: Par. 1, delete last sentence

Par. 5 should read: Construction power for structures around the ring could be served by placing temporary pole lines from nearby existing power lines to provide 480-V construction power. The impact would be short term and negligible.

Last Par., Line 3, replace the word would with the words propose to. Line 5, insert the words the proposed between connect and SSC.

Page 109: End of Par. 1, add: (Tri-State 1987)

End of Par. 2, add: (Public Service Company of Colorado 1987, 1983)

End of Par. 3, add: (Morgan County League of Women Voters 1985)

Ends of Par. 6 and Par. 8, add: (Exeter Associates 1988)

Last paragraph, Line 2, replace the number 3,454 with the number 3,249

Page 110: Par. 1, end of line 3, change PSC to PSCo

Add the reference citation (Exeter Associates 1988) in the following places: at the end of all three paragraphs, and as the replacement for the source in the table

Page 111: Add the reference citation (Exeter Associates 1988) in the following places: at the end of Par. 1 and Par. 3, and as the second source in the table

Page 112: Table 14.2.2-2, insert the following subheading under the title: Under Current Resource Plan Without SSC; add: Source: Exeter Associates 1988.

Par. 1, last line should read: ... of the SCC should only require a change in schedule for Pawnee Generating Station Unit 2.

Par. 3, delete the first sentence and replace it with the following: MCREA is a cooperative venture and is a member of the Tri-State Generation and Transmission Association, Inc. MCREA purchases all of its electric energy from Tri-State Generation and Transmission, Inc.

Page 113: Add the reference citation (North American Electric Reliability Council 1987) at the end of Pars. 2, 3, 4, and 5

**Page 114:** Par. 2, end of last line, add: (Morgan County League of Women Voters 1985)

Add the reference citation (Morris 1987) at the ends of Pars. 3, 5, and 7

Par. 6, end of last line, add: (Public Service Company of Colorado, 1987, 1983)

Par. 8, Line 2, replace the word campus with the words near cluster; Line 3, replace the number 0.9 with the number 4; Line 4, delete the word areas; Line 5, replace the number 12 with the number 17

**Page 116:** Add the reference citation (Morgan County 1988) at the end of Par. 3

**Page 118:** Par. 1, delete last sentence

Add the reference citation (Zessin 1988) at the ends of Pars. 3 and 7

Par. 5 should read: Construction power for structures around the ring could be served by placing temporary pole lines from nearby existing power lines to provide 480-V construction power. The impact would be short term and negligible.

**Page 119:** Add the reference citation (Exeter Associates 1988) in the following places: at the end of Pars. 3, 4, 5, and 6, and as the replacement for the source in the table

Par. 4, Line 4 replace the number 12,110 with the number 11,673

**Page 120:** Par. 2, delete first sentence and replace with the following: Three nuclear units have been placed in commercial operation and one more nuclear unit is scheduled for commercial operation in 1988 with a total capacity of 4,310 MW (Mid-America Interconnected Network 1988).

Add the reference citation (North American Electric Reliability Council 1987) at the end of Pars. 1 and 2

Add the reference citation (Commonwealth Edison 1988) at the end of Par. 3

Par. 3, first line, first sentence, delete the first word: Since; begin the sentence: With the addition of Braidwood Unit 2 as of August 1988 to the system, ...

Page 120: Add the reference citation (Exeter Associates 1988) at the  
(Cont) end of Pars. 4 and 5

Delete last paragraph

Page 121: Table 14.2.2-3, insert the following subheading under the  
title: Under Current Resource Without SSC; Secondary Loads  
for 1994 should read: 13, for 1995: 11, for 1996: 9, for  
1997: 8, for 1998: 10, and 1999: 11.

Same table, add: Source: Exeter Associates 1988

Page 123: At the end of Par. 1 add: (NICOR 1988, White 1988)

Page 124: Par. 6, end of last line, add: (Miller 1988)

Par. 7, end of last line, add: (Illinois Bell Telephone  
Company 1988)

Page 126: Par. 1, delete last sentence

Second-to-last paragraph, end of last line, add: (Consumers  
Power Company 1987)

Par. 5 should read: Construction power for structures around  
the ring could be served by placing temporary pole lines from  
nearby existing power lines to provide 480-V construction  
power. The impact would be short term and negligible.

Last paragraph, end of last line, add: (East Central Area  
Reliability 1987)

Page 127: Add the reference citation (Exeter Associates 1988) in the  
following places: Par. 3, Line 3, after the word reserves;  
Pars. 4 and 5, at the end of the last line; as the replacement  
for the source in the table (should read: Table 3.4-1,  
(Exeter Associates 1988)

Par. 3, end of last line, add: (East Central Area Reliabil-  
ity 1987)

Par. 3, Lines 4 and 5 should read: gas to new pipelines for  
the near cluster and experimental areas requiring 2.0 mi of  
construction work. Service ...; add to end of last sentence:  
for a construction length of 2.0 mi.

Par. 4, Line 5, replace the number 23,881 with the number  
23,431

Page 128: Par. 1, end of last line, add: (East Central Area Reliability 1986)

Pars. 2 and 3, end of last line, add: (Exeter Associates 1988)

Page 129: Table 14.2.2-4, insert the following subheading under the title: Under Current Resource Plan Without SSC; add: Source: (Exeter Associates 1988)

Page 130: Add the reference citation (East Central Area Reliability 1986) in the following places: Par. 1, Line 2, after the word construction; at the end of Par. 2

Add the reference citation (East Central Area Reliability 1987) at the end of Pars. 3 and 4

Par. 7, end of last line, add: (Marvin 1988)

Par. 9, end of last line, add: (Consumers Power Company 1987)

Page 131: Par. 1, Line 3, replace the words campus area with the words near cluster; last line, replace the number 4.5 with the number 3.0

Page 132: Par. 3, Line 2, add the reference citation (Alltel Corporation 1988, Michigan Bell Telephone Company 1988)

Page 134: Par. 1, delete last sentence

Last paragraph, Line 3, add (Exeter Associates 1988) after the acronym SSC; same paragraph, add the reference citations (Duke 1987b, Carolina Power and Light 1987b) at the end of paragraph.

Par. 5 should read: Construction power for structures around the ring could be served by placing temporary pole lines from nearby existing power lines to provide 480-V construction power. The impact would be short term and negligible.

Page 135: Par. 1, end of last line, add: (Duke Power Company 1987a; Duke Power Company 1988; Duke Power Company 1987b)

Par. 2, end of last line, replace reference citation with: (Carolina Power and Light 1987a)

Par. 3, end of last line, add: (Stancil 1988)

**Page 135:** Par. 6, Line 4 should read: ... generating capacity and  
(Cont) 9,719 MW ...; Line 6 should read: ... generating capacity of  
31,039 MW ...

Add the reference citation (Exeter Associates 1988) in the following places: the end of the last line of Pars. 5, 6, 7, and 8

**Page 136:** Add the reference citation (Exeter Associates 1988) in the following places: as the replacement for the source in both tables, and at the end of the last paragraph

**Page 137:** Par. 1, end of last line, add: (Exeter Associates 1988, North American Electric Reliability Council 1987)

Par. 2, end of last line, add: (Exeter Associates 1988)

**Page 138:** Table 14.2.2-5, insert the following subheading under the table: Under Current Resource Plan without SSC;  
add: Source: Exeter Associates 1988.

**Page 139:** Add the reference citation (North American Electric Reliability Council 1987) in the following places: end of Par. 1 and end of Par. 4

Par. 2, end of last line, add: (Stancil 1988)

Par. 3, Line 4, add the reference citation (Exeter Associates 1988) after the word programs

Par. 5, end of last line, add: (Exeter Associates 1988, North American Electric Reliability Council 1987)

**Page 140:** Add the reference citation (Public Service Company of North Carolina 1988) in the following places: at the end of the last line of Par. 1, Par. 3, and Par. 4

Add the reference citation (Salkowitz 1988) at the end of Par. 2 and in Par. 5, Line 4, after the far cluster

Par. 5, Lines 3 and 4 should read: ... supply gas to the near and far clusters. This would require ...; Last line, replace the number 3 with the number 21

**Page 141:** Par. 1, last line should read: 2.5 percent during construction and up to 2.2 percent during operations.

Par. 3, Line 3, add the reference citation (Salkowitz 1988) after the word years.

**Page 142:** Par. 2, second to last line should read: ... up to 2.5 percent during construction and up to 2.2 percent....

**Page 143:** Par. 1, delete last line

Par. 5 should read: Construction power for structures around the ring could be served by placing temporary pole lines from nearby existing power lines to provide 480-V construction power. The impact would be short term and negligible.

Last paragraph, end of last line, add: (Tennessee Valley Authority 1988)

**Page 144:** Add the reference citation (Exeter Associates 1988) in the following places: at the end of Pars. 3, 4, 5, and 6, and as the source for the table

Par. 4, Line 4, replace 31,239 MW; with 31,039 MW

**Page 145:** Add the reference citation (Exeter Associates 1988) at the end of Pars. 1, 2, and 4

Par. 3, end of last line, add: (Tipps 1987)

Par. 5, end of last line, add: (North American Electric Reliability Council 1987)

**Page 146:** Table 14.2.2-6, insert the following subheading under the title: Under Current Resource Plan Without SSC; add: Source: Exeter Associates 1988

**Page 147:** Par. 4, end of last line, add: (North American Electric Reliability Council 1987)

Last paragraph, end of last line, add: (Price 1988)

**Page 148:** Par. 1, Line 2, replace the words campus area with the words near cluster; Line 3, replace the number 6 with the number 12; Line 4 should read: ... be constructed to service the far cluster.; last line, replace the number 9 with the number 3

Section b., Par. 1, Line 6, replace 1.0 percent with 1.1 percent; Line 10, replace 4 percent with 4.2 percent; replace 3 percent with 3.6 percent

Page 149: Par. 2, end of last line, add: (Johnson 1988)  
Par. 3, end of last line, add: (South Central Bell Telephone Company 1988)  
Par. 7, last line, replace 4 percent with 4.2 percent;  
replace 3 percent with 3.6 percent

Page 151: Par. 1, delete last line  
Par. 3, end of last line, add: (McKinney 1988)  
Par. 5 should read: Construction power for structures around the ring could be served by placing temporary pole lines from nearby existing power lines to provide 480-V construction power. The impact would be short term and negligible.  
Last paragraph, end of last line, add: (Texas Utilities Electric Company 1987)

Page 152: Par. 1, Line 2, after the words Ft. Worth, sentence should end: Midland, Odessa, Wichita Falls, Arlington, Irving, Plano, Waco, Tyler, and Killeen (Texas Utilities Electric Company 1987)  
Par. 4, Line 1, systems should read: system; Line 2, replace 2,069 MW with 2,609 MW; replace 83 with 271; Line 3, replace 3,851 with 4,141; Line 4, replace 603 with 937  
Par. 5, replace 8,063 MW with 8,326 MW  
Par. 6, Line 3, replace 83 with 271; Line 4, replace 603 with 937

Add the reference citation (Exeter Associates 1988) in the following places: at the end of Pars. 4, 5, 6, and 7, and as the source of the table

The table data should read as follows:

Total Available Capacity	19,462	25,504
Peak Hour Firm Demand	16,688	21,363
Reserve Margin	2,774	4,141
Required Reserves (*)	2,503	3,204
Excess Reserves	271	937

\*Calculated, based on ERCOT 15 percent minimum required reserve level.

- Page 153:** Add the reference citation (Exeter Associates 1988) at the end of Pars. 1, 2, 3, and 4
- Par. 5, Line 1, replace 17,900 MW with 14,400 MW; Line 3, replace 2,650 MW with 2,199 MW; last line, replace 15,250 MW with 12,500 MW
- Add the reference citation (North American Electric Reliability Council 1987) at the end of paragraphs 5, 6, and 7
- Page 154:** Table 14.2.2-7, insert the following subheading under the title: Under Current Resource Plan Without SSC; last entry in the last column should read: 16.6; source should read: Exeter Associates 1988
- Page 155:** Add the reference citation (North American Electric Reliability Council 1987) at the end of Pars. 1, 2, and 3
- Par. 2, Line 2, replace 10 percent with 4.4 percent
- Last paragraph, Line 4, add (Bryan 1987) after the word customers; Line 6, add (Juenger 1987) after the word services
- Page 156:** Par. 1, Line 1, replace the word ten with the number 11
- Add the reference citation (Bryan 1987) in the following places: Par. 1, Line 5, after the word demand, and Par. 3, end of last line
- Add the reference citation (Juenger 1987) at the end of Pars. 1 and 2
- Par. 4, Lines 3 and 4, replace the words campus area with the words near cluster; Line 6, replace the number 2.5 with the number 7; last line, replace the number 2.7 with the number 5.0
- Page 157:** Par. 1, second to last line, replace 3 percent with 3.4 percent; replace 2 percent with 2.7 percent
- Page 158:** Par. 4, second to last line, replace 3 percent with 3.4 percent; replace 2 percent with 2.7 percent
- Page 159:** Par. 7, delete the first sentence and insert: Pawnee Generating Station Unit II is planned for operation in the late 1990's.
- REFERENCES:** All references for Appendix 14 (Sections 14.1 and 14.2) have been corrected and combined as included on the following "Errata and Revisions--Socioeconomics and Infrastructure Assessments--References" pages.

**NEW AND CORRECTED FIGURES**

1. The first part of the document discusses the importance of maintaining accurate records of all transactions and activities. It emphasizes that this is crucial for ensuring transparency and accountability in the organization's operations.

2. The second part of the document outlines the various methods and tools used to collect and analyze data. It highlights the need for consistent data collection procedures and the use of advanced analytical techniques to derive meaningful insights from the data.

3. The third part of the document focuses on the implementation of data-driven decision-making processes. It discusses how the collected data is used to identify trends, assess risks, and inform strategic planning, ultimately leading to improved organizational performance.

4. The fourth part of the document addresses the challenges and limitations of data analysis. It acknowledges that while data provides valuable information, it is not infallible and must be interpreted with care, taking into account potential biases and uncertainties.

5. The fifth part of the document concludes by summarizing the key findings and recommendations. It stresses the importance of ongoing monitoring and evaluation of the data analysis process to ensure it remains effective and relevant in a rapidly changing environment.

6. The sixth part of the document provides a detailed overview of the data collection process, including the identification of data sources, the design of data collection instruments, and the implementation of data collection protocols.

7. The seventh part of the document discusses the various methods used for data analysis, such as descriptive statistics, inferential statistics, and regression analysis, and how these methods are applied to the collected data.

8. The eighth part of the document focuses on the interpretation of the results of the data analysis. It discusses how the findings are used to draw conclusions and make recommendations, and how these recommendations are integrated into the organization's overall strategy.

9. The ninth part of the document addresses the ethical considerations of data analysis. It discusses the importance of protecting individual privacy, ensuring data security, and using data responsibly to avoid any potential harm or misuse.

10. The tenth part of the document provides a final summary and conclusion, reiterating the key points and the overall value of data analysis in supporting organizational goals and decision-making.

**NEW AND CORRECTED FIGURES**

<u>Figure</u>	<u>Title</u>	<u>DEIS Page</u>	<u>Page</u>
14.1.3.4-5	SSC-Related Population Impacts: Michigan	148	1
14.2.1-8	Site Access Roads Proposed by Texas	79	2

The first part of the report deals with the general situation in the country. It is noted that the economy is still in a state of depression, and that the government is struggling to meet its obligations. The report also mentions the need for further reforms and the importance of maintaining law and order.

In the second part, the report discusses the progress of the government's policies. It is noted that the government has made significant progress in various areas, including the development of the economy and the improvement of the social services. However, it is also noted that there are still many challenges ahead, and that the government must continue to work hard to overcome them.

The third part of the report deals with the international situation. It is noted that the world is still in a state of uncertainty, and that the government must remain vigilant in its foreign relations. The report also mentions the need for the government to work closely with other countries to promote peace and stability in the world.

Finally, the report concludes with a number of recommendations. It is recommended that the government should continue to implement its policies and reforms, and that it should also take steps to improve the efficiency of its administration. It is also recommended that the government should continue to work closely with the people and other organizations to promote the development of the country.

The report also mentions the need for the government to continue to work hard to overcome the challenges ahead. It is noted that the government must continue to maintain law and order, and that it must also continue to improve the social services. The report also mentions the need for the government to continue to work closely with other countries to promote peace and stability in the world.

The report also mentions the need for the government to continue to work hard to overcome the challenges ahead. It is noted that the government must continue to maintain law and order, and that it must also continue to improve the social services. The report also mentions the need for the government to continue to work closely with other countries to promote peace and stability in the world.

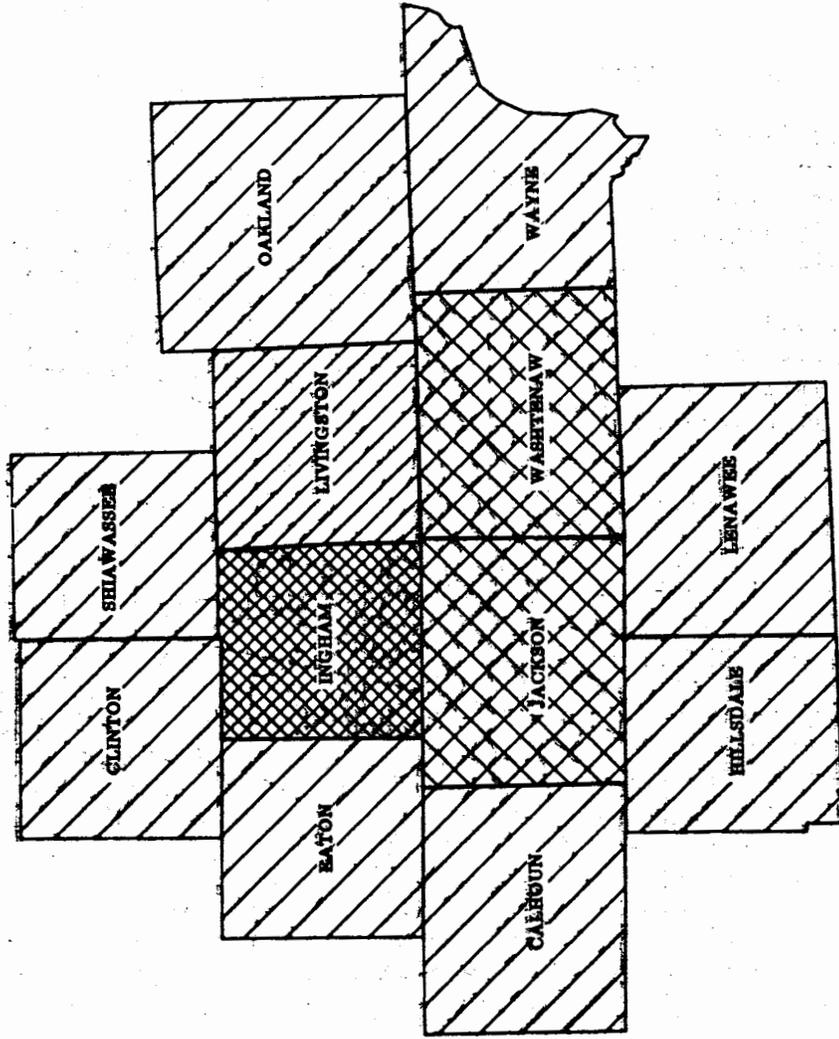

The report also mentions the need for the government to continue to work hard to overcome the challenges ahead. It is noted that the government must continue to maintain law and order, and that it must also continue to improve the social services. The report also mentions the need for the government to continue to work closely with other countries to promote peace and stability in the world.

The report also mentions the need for the government to continue to work hard to overcome the challenges ahead. It is noted that the government must continue to maintain law and order, and that it must also continue to improve the social services. The report also mentions the need for the government to continue to work closely with other countries to promote peace and stability in the world.

- Page 1:** Par. 1, Line 2, add after the word potential: adverse
- Par. 2, Line 10, sentence should end with: ... the DOE, the SHPO, and the Advisory Council on Historic Preservation.
- Par. 3, the first sentence should read: The cultural resource assessments indicate that significant sites exist at each of the proposed SSC sites.
- Page 4:** Fourth bulleted item, insert a comma after the word historical; last bulleted item should read: Mitigation reports to agencies as necessary. (Second sentence should be deleted.)
- Page 5:** Subsection B., Par. 1, second and third sentences should read: Disturbances of this kind could occur within areas where facility construction zones are proposed, and within areas of ancillary activities, such as access roads, storage yards, parking areas, assembly areas, and project field offices. These kinds of activities often disturb surface and subsurface elements of historic and archaeological sites. Delete last sentence.
- Move Par. 2 of Section 15.1.2.2 to follow Par. 1 of Section 15.1.2.3
- Page 6:** Par. 1, item 4 should read: the extent of development of predictive studies on resource potential and distribution.
- Par. 2, Line 3, insert a period after the word data and delete the rest of that sentence
- Par. 5, Line 7, insert the word criteria after the word eligibility and delete the rest of the sentence.
- Par. 6, last line, insert a period after the word integrity and delete the rest of the sentence.
- Page 7:** First three lines should read: ... In locations where avoidance is not feasible because of technical, operational, regulatory, or cost considerations, alternative mitigation measures would be developed based on scientifically sound research programs....
- Page 9:** Par. 2, replace last sentence with the following: These people are probably the descendants of the Hohokam, but exist in a smaller population and on a different economy.

- Page 9:** Par. 3, Line 5, reference citation should read: (Schackley and Rice 1985)  
(Cont)
- Last paragraph, Line 3 should read: ... The Juan Bautista de Anza Trail...
- Line 5, replace the word eligible with the words under consideration
- Page 10:** The paragraph that runs from Page 10 to Page 11 should read:  
A recent study pertinent to the project area is the Corridor Studies Report: Santa Rosa to Gila Bend 230 kV Transmission Line Project, prepared by Wirth Associates, Inc. in 1982; a Class II sample survey was performed. (U.S. Department of Interior 1982). In 1986, Archaeological Consulting Services surveyed the line in its entirety. Throughout the Maricopa Mountains,...
- Page 11:** Par. 1, delete the first line and the first three words of the second line
- Par. 4, end of Line 1, insert: (the campus areas A, B, and C and the buried beam access areas).
- Par. 4, end of first sentence, add: (Montero et al. 1988)
- Page 14:** Par. 5, Line 6, sentence should end with: ... the DOE, the SHPO, and the Advisory Council of Preservation.
- Page 15:** Par. 4, delete last sentence
- Page 16:** Par. 1, Line 3: Move (9500 B.C. - 6000 B.C.) to next line following the word occupation
- Page 18:** Par. 7, Line 1, replace the name Joyner with names Pearce and Whitacre
- Page 21:** Par. 3, Line 1, replace the word access with: E-470
- Par. 4, Line 5 should read: ... WN-10, is potentially located within the proposed collider ring.
- Par. 6, Line 3 should refer to Table 15-3
- Page 22:** Add to end of Par. 6: A reburial policy negotiated by the State Archaeologist and the Colorado Native American Heritage Council is in place.
- Page 23:** Par. 1, Line 3, sentence should end with: ... the DOE, the SHPO, and the Advisory Council on Historic Preservation.

- Page 23: Par. 2, Line 2, delete: in the proposed project area. Add:  
(Cont) the following: ... on the proposed SSC footprint. However,  
an archaeological sample survey of the proposed access roads,  
including proposed corridors linking Denver and Fort Morgan  
with the proposed SSC site, has been completed.
- Page 26: Last paragraph, Line 5, replace the number 65 with: ±5
- Page 32: Par. 4, Line 3, sentence should end with: ... the DOE, the  
SHPO, and the Advisory Council on Historic Preservation.
- Page 35: Par. 3, Line 4, replace the number 44 with 37
- Page 42: Par. 2, delete last sentence  
  
Par. 3, Line 3, sentence should end with: ... the DOE, the  
SHPO, and the Advisory Council on Historic Preservation.
- Page 45: Last paragraph, beginning of Line 1 should read: Sixty-three  
historic properties ...; end of Line 3 should read: ...  
fifteen in Durham County, ...
- Page 52: Par. 3, Line 4, add to the end of the reference citation:  
, Sheffield 1988  
  
Par. 4, Line 3, sentence should end with: ... the DOE, the  
SHPO, and the Advisory Council on Historic Preservation.  
  
Par. 5, Line 1, insert the word archaeological before the  
word intensive; insert the following sentence after the first  
sentence: Extensive historic structures surveys have been  
undertaken in Granville and Durham Counties.
- Page 58: Par. 2, Line 3, sentence should end with: ... the DOE, the  
SHPO, and the Advisory Council on Historic Preservation.
- Page 64: Par. 5, Line 3, sentence should end with: ... the DOE, the  
SHPO, and the Advisory Council on Historic Preservation.
- Page 70: Par. 4, Line 4, replace 1964 with 1963; Last paragraph,  
Line 1, replace the words flora and fauna with the word  
fossils
- Page 71: Par. 1. Line 2 should read: ... the proposed SSC site  
revealed traces of upper Cretaceous ...  
  
Par. 3, end of Line 1, vertebrate should read: vertebrae  
  
Par. 6, Lines 2 and 3 should read: ... produced traces of  
upper Cretaceous fossils, ...

**Page 73:** Add to the end of Par. 3: The Robein Silt and Peddicord Formation are units generally buried by younger tills and/or outwash. These units frequently contain pollen, mollusks, and potentially, vertebrate remains.

**Page 77:** Par. 3, Line 5 should read: ... These also contain the remains of mammoth and mastodon megafauna that...

**Page 84:** Insert the following paragraph after Par. 3:

Mebone Cave is a recently discovered cave located within 2,000 ft of injector area J6 of the proposed Tennessee SSC site. Several bones tentatively identified as elk, horse, and/or deer were located in the entrance chamber. One bone, possibly deer, has been split for removal of marrow (Crawford 1988).

Sensitivity and Magnitude of Scenic and Visual Impacts to  
Significance
- Page 11:** Par. 2, Line 3 should read: ... Section 16.2.3.2 ...
- Page 12:** Delete all text and replace with the following:
- o Campus and Injector Areas (Areas A and B). The campus complex is a group of 15 buildings housing laboratories, offices, heavy works buildings, shop buildings, warehouses, and other support facility buildings. The complex would occupy 100 acres of the 350 acres dedicated to it. The injector consists of 30 one-story buildings in 17 clusters about the chain of connected accelerators. Materials of construction for campus and injector buildings are assumed to be identical to those for the service areas; i.e., lightweight steel buildings paneled for insulation. The aggregate of the facilities would appear to be a mix of heavy and light industrial facilities and research park-like structures. No emphasis has been placed on individual structures in the campus and injector areas because these areas are within moderate to highly sensitive public views relative only to points distant from the facilities.
  - o Sector Service Areas (F1 through F10). Service facilities house the refrigerators, compressors, and power supplies needed to operate the facility. There would be ten service areas spaced equidistantly about the collider ring, centering on tunnel sectors, and one each at the near and far clusters. They have been referenced as F1 through F10. Service facilities would occupy only about half of the 5.7 acres dedicated to each of the ten locations. The balance of the area is assumed to be used for contractors' office space, parking, laydown areas, and construction yards. Site facilities consist primarily of a pump/compressor building and a single structure housing refrigeration facilities, the power supply, and an intermediate access area surrounding the refrigeration shaft. These two buildings combined are over 10,600 ft<sup>2</sup> and two stories high. Also, there is a tank farm for gas and liquid helium, three transformers, two cooling towers, and a parking area. All surface buildings are to be lightweight steel frame buildings

Page 12: covered with insulating panels and supported by concrete slab  
(Cont) tions. Each site would appear to be a light industrial compound. For security, as well as public health and safety, it is assumed that the compound would be contained within a chain link security fence.

- o Intermediate Access Facilities (E1 through E10). There would be five intermediate access facilities in each of the two arcs, each serving for collider ring ventilation and emergency exit. These are designated as E1 through E10. Each facility would include a one-story surface building and an air cooler. The building would be of the same construction as the service area buildings, but would be much smaller: 31 ft on each side (961 ft<sup>2</sup>). Security fencing and parking for several vehicles is assumed. About 1 acre is dedicated to each of the E1 site locations. The building and grounds would occupy less than

Page 13: Replace second bulleted item with the following:

These facilities are to be located approximately 5,900 ft from the abort kicker magnet system/rf acceleration system buildings (there will also be a cooling tower adjacent to each of these small, one-story buildings. In addition, there will be a small cooling tower near each beam absorber. All of these will be within the injection complex and within fee simple lands. Because they will be near the injector and will be in fee simple lands where residents would be relocated, their visual impact was not considered. Compared to the injector facilities, the abort kicker/rf buildings would be insignificant, and with the relocation of residents, potential visual impacts on residential views becomes moot.

G. F5

Summary. VM Class 2 and 4; moderately sensitive travel route; highly sensitive public use area; potentially significant; local scope; impacts on residential views mitigable to a level of insignificance in the short term; impacts on road-based views may be mitigable in the short term.

The service area would be adjacent to Dauberman Road in a field and between two farms. The closest farm is less than 1/8 mi to the north; the other is about 1/3 mi to the south. Views from these farms are considered to be low in sensitivity. However, a subdivision lies to the north and northeast. Twenty-two of the homes in this subdivision would be within the fee simple area of the Far Cluster and families living there would be relocated. The remaining homes closest to the F5 site would be about 1/4 mi to the northwest. The facilities of this site, at the viewing distance involved, would not go unnoticed from the residences. It is assumed that the farms noted would be removed. Such removal would leave F5 more obtrusive than would be predicted than if they were to remain. The F5 facilities would be the only structures between the residences and Dauberman Road to the southwest.

Farms in the vicinity that would remain have structures that are substantially larger than those of the F5 facilities. At the viewing distance involved, and given the open sweep of the available views, F5 would probably be visually subordinate to other features (homes, farms) that are closer. The predicted visual impact would be VM Class 2, which, for the highly sensitive views affected, would be considered significant.

Views from Dauberman Road would also be affected. This road is a primary access to the subdivision noted, although it serves other destinations as well. The turnoff to the subdivision is about 1/4 mile north of F5. Sensitivity for the part of Dauberman Road opposite the F5 site would be moderate, based on the criteria for sensitivity. Views toward F5 would be dominated by the facilities there (VM Class 4). The impact would be significant.

The impacts noted would be important to the residents in the immediate area and, therefore, are judged to be local in scope.

Mitigations. Design measures described in relation to F2 and F7 should be considered during detailed project design. These measures could conceal the facility (landscaped berms,

Page 27: muted colors, etc.) The time required for screening to  
(Cont) become fully effective would be substantial, relative to  
views from the residences, given the distance involved. The  
combination of berms and plantings would have to equal the  
height of the buildings. Views from the road could be more  
quickly screened, depending on the set-back from the road for  
the facility versus that for the planted berms.

Therefore, it is estimated that impacts on views from the  
residences could not be fully mitigated by screening in fewer  
than 5 years (long-term impact), while those on views from  
Dauberman Road may be mitigable in the short-term.

If technically possible, it would be effective to site F5  
closer to the existing farm 625 feet to the north and the  
farm structures left intact. The farm buildings may be  
sufficient in size to block many residence-based views of  
F5. In addition, architectural treatment, such as that  
suggested by the state of Illinois, might provide a barn-  
like appearance to the two-story structures, reducing the  
visual contrast of the F5 structures with their agricultural  
context. This latter measure may be most successful rela-  
tive to the comparatively distant views from the residential  
area, rather than those from the road, which invite closer  
attention. If successful, the impact on residential views  
may be mitigated upon completion of construction. The  
success of architectural treatment relative to views from  
the road can only be assessed during final design.

Page 28: Last paragraph, delete the second, third, fourth, and fifth  
sentences and replace with the following: The one-story  
building would be fully in view from these homes, being 500  
to 700 ft north of the entrance to the subdivisions. Because  
it is near the entrance, it could not escape attention. It  
would be comparatively small but not compatible with the  
area features. However, at the viewing distance involved  
from the homes, the facility would be noticeable but subordi-  
nate to other features in view (VM Class 2). Those exiting  
the subdivision and turning north would pass by the facility  
at close range and it would dominate views from the road  
(VM Class 4).

Page 30: Par. 4, Lines 4 and 5 should read: ... of being noticeable.  
Apart from the seven facility sites, for the rest, the roll-  
ing terrain is ...

Page 34: Par. 3, Line 2, delete: J1, J3, and J4

Page 35: Par. 1, Line 4, replace the number 66 with 6

Par. 4, last line should read: affected; potentially sig-  
nificant impact of local scope; not mitigable.

Page 41: Par. 2, last line should read: would be potentially significant, but of local importance.

Par. 4, last line should read: impact; regional scope; long term.

Par. 5, last line should read: negligible, of regional scope (State-designated scenic highway), but long term.

Page 43: Par. 3, Line 3, revegetated should read: devegetated.

Page 44: Par. 1, end of Line 3, replace the word testing with the word tinting

Page 49: Par. 4, Line 2, replace the word more with the word marl
