

Department of Energy
Washington, DC 20585

December 1, 2016

Justin Martin
Vice President
Allstyle Coil Company L.P.

Dear Mr. Martin,

The U.S. Department of Energy (“DOE”) grants the petition submitted by Allstyle Coil Company L.P. (Allstyle) on October 6, 2016 requesting a 180-day extension of the December 5, 2016 date on which any representations of central air conditioner and heat pumps (CACs & CHPs) energy use or efficiency are required by statute to reflect the energy use or efficiency as measured by DOE’s test procedure for that product (Docket No. EERE-2009-BT-TP-0004-0076). 42 U.S.C. § 6293(c)(2). Allstyle timely submitted its petition pursuant to 42 U.S.C. § 6293(c)(3). Specifically, the statute provides that a manufacturer, distributor, retailer, or private labeler may submit a petition requesting that the Secretary extend, for no more than an additional 180 days and with respect to such petitioner, the date by which representations must be made in accordance with any new or amended DOE test procedure. The Secretary may grant an extension upon a finding that that the petition demonstrates that meeting the statutory requirement would impose an undue hardship on the petitioner.

Allstyle’s petition requests a 180-day extension beyond the statutory requirement, contending that the requirement would impose an undue hardship on Allstyle Coil Company L.P. DOE has reviewed the petition and finds that Allstyle has sufficiently demonstrated that requiring representations of energy use or efficiency to be based on the new DOE CAC & CHP test procedure beginning on December 5, 2016, would impose undue hardship on Allstyle Coil Company L.P. More specifically, Allstyle asserts that the company will need to make hardware and software updates to its lab facility to meet the new DOE CAC & CHP test procedure requirements, a process that is being delayed by backlogged lab facility service providers. Even after Allstyle completes its lab facility updates, the company estimates that thousands of hours will be needed to re-test and re-rate close to one hundred basic models. As such, DOE extends, until June 2, 2017, the date by which, under 42 U.S.C. § 6293(c), CAC & CHP energy use or efficiency representations by Allstyle Coil Company L.P. must reflect testing in accordance with the amended DOE test procedure published on June 8, 2016.

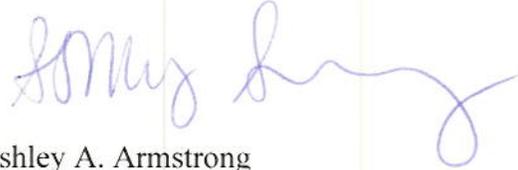

Finally, other than with respect to certifications of compliance with applicable energy conservation standards, DOE notes that the Federal Trade Commission (FTC), not DOE, regulates representations regarding product efficiency. Current Federal energy conservation standards for CACs and CHPs can be found in 10 CFR Part 430.32(c) for which manufacturers are required to certify compliance. This 180-day extension only applies to the date by which representations must fairly disclose the results of testing in accordance with the amended

Appendix M test procedure (effective July 8, 2016), and does not absolve the manufacturer of other obligations, including certification or compliance with the Federal energy conservation standards.
