LSA Exercise

**EXERCISE SUMMARY**
- Single vehicle accident on a public highway
- A truck hauling LSA material (Class 7 - Radioactive) has spilled several drums and the contents of these drums has been released from both outer and inner packaging
- This exercise does not include fire or fuel spillage
- This exercise, as written, includes an (optional) injury scenario
- The exercise simulates the initial occurrence of the accident through the arrival and integration of the DOE RAP Team into the Incident Command System
- Appendix A includes guidance for developing an Exercise Safety Plan
- Appendix B includes evaluation forms to document player performance
- Appendix C includes a Chronology Log Sheet
- Appendix D includes the Radiological Data for the exercise

**1.0 INTRODUCTION**
This scenario provides the planning instructions, guidance, and evaluation forms necessary to conduct an exercise involving a highway shipment of Low Specific Activity (LSA) material. This exercise manual is one in a series of five scenarios developed by the Department of Energy Transportation Emergency Preparedness Program. Responding agencies may include several or more of the following: local municipal and county fire, police, sheriff, and Emergency Medical Services (EMS) personnel; state, local, and federal emergency response teams; emergency response contractors; and other emergency response resources that could potentially be provided by the carrier and the originating facility (shipper).

This scenario provides the guidance for conducting the exercise in a safe, efficient, coordinated manner, and provides a historical record of the exercise.
2.0 SCOPE
This exercise scenario should be used to demonstrate the local community’s emergency response deployment to a highway accident involving LSA materials. It may also be used to demonstrate the initial phase of the emergency response notification and communication system to:

- Demonstrate the emergency response notification and communication system
- Observe actual response times of emergency responders to a simulated accident scene
- Verify equipment operability (including radiological monitoring equipment) and the accuracy of field emergency response procedures
- Ensure all appropriate notifications are made in accordance with local, state, and federal regulations
- Identify and assess incident scene hazards
- Determine and implement protective measures required for the safety of both response personnel and the general public
- Determine additional response resources required to contain and restore the site and make appropriate notifications to obtain those resources
- Demonstrate response activities, including:
  - Responder deployment
  - Responding agency interaction
  - Incident Command System (ICS) establishment and operations
  - Identification and assessment of hazards
  - Incident control

3.0 OBJECTIVES
The objectives listed below are based on a simulated transportation (highway) accident and should be performed in accordance with the appropriate state, county, and local community procedures, and according to the standards and limits outlined in each objective's extent of play. The numbering system employed for the objectives is based on the objective numbers from the Federal Emergency Management Agency (FEMA) Hazardous Materials Exercise Evaluation Methodology (HM-EEM); the objectives may not be in sequential order. Appendix B of this document contains necessary evaluation forms to evaluate responder performance for this exercise scenario. A complete listing of the 16 FEMA HM-EEM objectives can be found in the “Hazardous Materials Exercise Evaluation Forms” document located on the TEPP webpage http://www.em.doe.gov/otem/program.html.
Objective 1 - Initial Notification of Response Agencies and Response Personnel
Demonstrate the ability to notify response agencies and to mobilize emergency personnel.

Extent of Play:
This objective should be demonstrated by each participating response agency as it would in an actual emergency. All appropriate primary or backup communications systems (radio, cell phone, land line, etc.) should be used during the exercise as in an actual emergency. The exercise will be initiated by contacting the local emergency notification network and reporting the simulated accident/location. All appropriate federal/state/county/local response agencies and units agreeing to participate should be appropriately notified and should respond. All response units should be timed from receipt of emergency notification to arrival on scene.

Personnel/units should be deployed, real-time, to the accident scene based on accident conditions relayed via the notifications system. Responding units shall not transit in an “emergency mode” (i.e., no lights and sirens) and should not take/perform any action that impacts the general public, such as establishing road blocks or detours at or near the simulated incident scene.

Objective 2 - Direction and Control
Demonstrate the ability to direct, coordinate, and control emergency response activities through operation of an Incident Command System (ICS) and other direction and control structures.

Extent of Play:
This objective should be demonstrated by the arrival and assumption of the Incident Commander (IC) position by the first responding unit/personnel as it would be in an actual emergency. The position and responsibility of Incident Command should be transferred to the senior response officer, upon arrival, and a status turnover should be conducted. A visible command post, communication system, and organizational structure should be established. (Assumption: Response personnel have been trained to conduct response using ICS).

Objective 3 - Incident Assessment
Demonstrate the ability to identify the hazardous materials involved in an incident/accident and to assess the hazards associated with the material involved during both the emergency and post-emergency phases.

Extent of Play:
This objective should be demonstrated by the active assessment of the incident hazards, including a preliminary observational survey of possible injuries, physical hazards at the accident site,
materials released, extent of release, release receptors, and the hazards associated with the materials. The initial assessment information should be obtained from placards, shipping documents, package markings, labeling, and the Emergency Response Guidebook. Based on the preliminary observational assessment, a determination of further resources to physically assess the incident site should then be made. If resources are available, further physical assessment should occur. If local resources are not available for further assessment, requests for assistance should be made as appropriate (State Response Team or other higher level technical responders).

**Objective 4 - Resource Management**
Demonstrate the ability to mobilize and manage resources required for the emergency.

**Extent of Play:**
This objective should be demonstrated by determining the resources required for response as a result of the incident assessment. Once the resources required are determined, proper notification and mobilization should occur. Additional resources should be integrated into the response effort by the Incident Commander.

**Objective 5 - Communications**
Demonstrate the ability to establish and maintain communications essential to support response to an incident/accident.

**Extent of Play:**
This objective should be demonstrated by establishing and maintaining communication between all resources activated for the response. All appropriate primary or backup communications systems (radio, cell phone, land line, etc.) should be used during the exercise as in an actual emergency. A communications system between response personnel should be established on site by the Incident Commander, as should offsite communications to local, state, federal, shipper, transportation and contract resources.

**Objective 10 - Response Personnel Safety**
Demonstrate the ability to protect emergency responder health and safety.

**Extent of Play:**
This objective should be demonstrated by a site safety officer establishing one or more zones to regulate the movement of personnel throughout the accident scene/site. Responders should also demonstrate usage of appropriate personal protective equipment (PPE), responder accountability system, and usage of appropriate monitoring equipment for site hazards.
Objective 11 - Traffic and Access Control
Demonstrate the organizational ability and resources to implement site security, to control evacuation traffic flow and access to evacuated and sheltered areas.

Extent of Play:
This objective should be demonstrated by the effective implementation of site security measures, utilization of appropriate resources, and effective traffic control. Although security units should be sent to the proper locations for traffic control, no actual roadblocks or detours that would affect the general public should be established.

Objective 14 - Emergency Medical Services
Demonstrate the adequacy of personnel, procedures, equipment, and vehicles for transporting contaminated and/or injured individuals, and the adequacy of medical personnel and facilities to support the operation.

Extent of Play:
This objective should be demonstrated by the effective determination of EMS resources required for the accident site, communication of potential contamination hazards that may require pre-notification to EMS and other medical support personnel, and steps taken by EMS personnel to plan and prepare for potential contamination hazards.

Objective 15 - Containment and Cleanup
Demonstrate the ability to implement appropriate measures for containment, recovery, and cleanup of a release hazardous material.

Extent of Play:
This objective should be demonstrated by notifying and obtaining resources for assistance. Personnel (response and additional resources) should assess the impact of the release, demonstrate appropriate planning strategies for control and containment, and then control and contain the released material, if adequate resources are available.

Objective 16 - Incident Documentation and Investigation
Demonstrate the ability to document a hazardous materials incident/accident and response.

Extent of Play:
This objective should be demonstrated by implementing appropriate log-keeping, follow-up documentation, and debriefing procedures.
4.0 EXAMPLE SCHEDULE
The table below provides an example schedule for planning and conducting the exercise. This schedule may be modified for site-specific exercise conditions. A more detailed checklist is included in Appendix A.

<table>
<thead>
<tr>
<th>Date</th>
<th>Planning</th>
<th>Schedule</th>
</tr>
</thead>
<tbody>
<tr>
<td>120 Days</td>
<td></td>
<td>Conduct a planning meeting to discuss objectives, safety, and extent of play and identify player organizations. Also select exercise dates and location.</td>
</tr>
<tr>
<td>90 Days</td>
<td></td>
<td>Validate objectives and modify exercise scenario to meet community response needs. Schedule needed responder training. Involve media to promote exercise activity.</td>
</tr>
<tr>
<td>60 Days</td>
<td></td>
<td>Finalize exercise scenario, player organizations, and review modified exercise scenario. Identify and secure necessary exercise props.</td>
</tr>
<tr>
<td>30 Days</td>
<td></td>
<td>Select controller and evaluator organizations. Conduct necessary controller and evaluator training.</td>
</tr>
<tr>
<td>25 Days</td>
<td></td>
<td>Establish weekly planning meeting schedule. Planning meetings will be used to finalize remaining details. Establish an exercise punch list to ensure all planning and safety items have been assigned and are scheduled to be done.</td>
</tr>
<tr>
<td>10 Days</td>
<td></td>
<td>Conduct player, evaluator and controller briefings.</td>
</tr>
<tr>
<td>1 Day</td>
<td></td>
<td>Review Safety Plan, ensure exercise props are available, and make notifications to all agencies of exercise time and location.</td>
</tr>
</tbody>
</table>
5.0 PARTICIPATION
The following is a list of suggested personnel/groups that may participate in the exercise, depending on the desired complexity of the exercise. (Many of these agencies may be simulated.)

**Exercise Coordinators**
Lead Planner
Safety Officer
Media Coordinator

**Local Response Organizations**
Local Fire Department
Local Municipal Police Department
Local Emergency Operations Center (EOC)
County Sheriff’s Office
Emergency Medical Service/Ambulance/Hospital
Local HazMat Response Team (if available)
Other Mutual Aid Organizations

**State/Federal Agencies**
State Hazardous Materials Response Team
State Radiation Authority
State Emergency Operations Center (EOC)
Nearby DOE Facility
US Environmental Protection Agency
Nuclear Regulatory Commission
National Response Team
National Response Center (US Coast Guard)
DOE Regional RAP Team

**Commercial Organizations**
Commercial Licensed Radioactive Materials Transporter
Commercial Contractor Trained for Radioactive Material Cleanup
6.0 CONDUCT
The following section provides guidelines for exercise conduct.

Concept of Operations
Three groups of personnel should participate in the exercise: Players, Controllers, and Observers.

Players
Players are individuals who have assigned roles during an emergency. Players should respond to the scenario as they would during an actual emergency, initiating actions to control and mitigate the simulated emergency to ensure the health and safety of response personnel and the public. Players are expected to obtain necessary information through established emergency information channels and to use their own judgment in determining response actions when resolving problems.

Controllers
Controllers are responsible for the safe and effective conduct of the exercise. They perform an active role in the exercise by providing data to players. Controllers are the only non-players who provide information or direction to players. Controllers may prompt or initiate certain player actions to ensure exercise continuity. Controllers are identified by wearing standard identification devices such as caps, or arm bands. Appendix A includes an exercise controller position listing table to assist in determining who is needed as a controller for the exercise.

Observers
Observers are persons who do not have an active exercise role but who watch exercise conduct. Observers do not communicate directly with players. They should, however, report any safety concerns to a controller. Observers are identified by wearing standard identification devices different from those worn by controllers.

Controlling Messages
Exercise Messages
Exercise messages are used to control the flow and progress of the exercise. These messages are designed to simulate the physical indications that would normally be available to responders in an actual emergency. Exercise messages are issued by controllers to players at appropriate times. The issuance of exercise messages is coordinated via the scenario timeline; controllers are briefed prior to the exercise in a controller briefing. Concurrence from the Lead Controller during the exercise is not normally required.
Contingency Messages
Contingency messages are used to ensure the continuity of the exercise in the event that players do not initiate actions that are critical to the exercise timeline. In most instances, issuance of contingency messages requires the notification of the Lead Controller PRIOR to issuance.

Implementation
Exercise Ground Rules
At no time shall players, controllers, or observers physically walk across the highway or railroad tracks without the escort of Safety Controllers or Public Safety Officers. Players shall not have prior knowledge of the scenario. The exercise scenario should not include any actions or situations that degrade the actual condition of systems and equipment, affect the detection and assessment of actual emergencies, or diminish the capability for response to actual emergencies. No actions or reactions shall be initiated that involve actual operation of equipment (other than radiological monitoring) or affect operating capability.

Emergency response facilities should not be pre-activated and response personnel should not be pre-staged. All players should follow their normal work routines until exercise events cause them to initiate emergency response actions. Except for the actions identified in the list of actions to be simulated, or as otherwise directed by exercise controllers, players are to respond to exercise events and information as if the emergency were real. Players shall act as if simulated hazardous conditions were real.

All exercise participants shall take no action that reduces the safety of themselves or the public. All exercise participants shall adhere to public laws, including traffic regulations, and shall follow any orders given by law enforcement personnel. Controllers should only provide players with the information that they are specifically designated to disseminate in their assigned functional area. Players are expected to obtain other necessary information through existing emergency information channels. In the event that players do not initiate actions “critical” to the successful completion of the exercise scenario, controllers should issue Contingency Messages, which direct players to initiate specific actions and/or provide on-the-spot training to assist completion of critical actions. All exercise messages and communications shall be preceded and followed by the phrase, “THIS IS AN EXERCISE.”

Exercise Controller Guidelines
The responsibility of exercise controllers is to ensure that exercise events occur in the sequence prescribed by the scenario and to monitor exercise play. Exercise controllers must be familiar with suspension of play procedures that pertain to their assigned area.
Before Exercise Day
1. Familiarize yourself with the exercise objectives and extent of play applicable to your area of control.
2. Ensure that you understand the scenario and timeline.
3. Obtain and review suspension of play procedures applicable to your area of control.
4. Familiarize yourself with the controller organization and communication methods.
5. Review exercise messages and scenario information that you are responsible to provide to players. Ensure that you understand how the players are to receive this information and what their responses should be.
6. Ensure you know how to contact the Lead Controller for questions or problem resolution.
7. Perform a field walk-down of your observation location(s) to ensure you know where and when you must report prior to exercise commencement.

Immediately Prior to the Exercise
1. Report to your assigned area as scheduled.
2. Familiarize yourself with your assigned work station and equipment.
3. Ensure that you are readily identifiable by all players.
4. Identify and test a phone or radio that you may use for communications with other controllers.
5. Identify yourself to any players who may be in your area of control. Ensure they are familiar with your role.

During the Exercise
1. Ensure that safety remains the number one priority for all actions and activities carried out during the exercise.
2. Identify all players that you will be controlling during the exercise, and inform them of your function.
3. If applicable during the exercise, brief all players in your area on exercise ground rules and/or initial conditions. Explain that you may help/instruct the player(s) in proper response actions based on their actions during the exercise.
4. Remain at your assigned location until the exercise has been terminated by the Lead Controller.
5. Ensure that each player in your area of control/observation has been logged on an attendance sheet and that the attendance sheet identifies the appropriate facility.
6. If a real emergency occurs that affects the players in your area of control/observation, terminate your portion of the exercise and notify the Lead Controller.
7. Refer any/all actual general public and/or media inquiries to the “Media Coordinator,” TBD, as applicable, based on your location.
8. Position yourself to maximize your effectiveness in issuing messages and/or observing the players.
9. Record arrival times and actions of key players.
10. Distribute exercise messages, as required, and provide additional input, as necessary, to keep the scenario progressing as designed. Make sure that the players understand the messages you give them.
11. If you are uncertain what actions are being taken by the players or why, make sure you ask, so that you understand the extent of play. Phrase questions so as not to prompt the players of expected actions. Allow the players reasonable flexibility to perform their functions and demonstrate their skill, knowledge, and initiative.

12. Do not allow external influences to distract the players.

13. Do not allow simulation when notification/communication equipment is available (unless the action would decrease the level of personnel safety).

14. Note all your observations, as appropriate, on the provided Exercise Chronology Log in Appendix C.

15. Do not allow player actions to continue if they would obviously impair scenario continuity. Notify the Lead Controller if the timeline is off schedule, if the players depart significantly from the scenario, or if you are in doubt as to what to do.

**Termination**

**Upon Exercise Termination**

2. Document exercise findings on the appropriate Exercise Evaluations Forms found in Appendix B and the Exercise Chronology Log found in Appendix C,

3. Participate in the post-exercise debriefing.

**Exercise Controller Debrief/Exercise Report**

Immediately upon termination of the exercise, exercise controllers should meet to review player actions and identify exercise issues. An exercise report documenting exercise observations should be prepared upon completion of the exercise and should be submitted to the appropriate organizations.

**7.0 NARRATIVE SUMMARY/TIMELINE**

The following section provides a narrative summary of the exercise scenario and an approximate timeline (Table 2.0, located on page 17) for exercise activities. The timeline also provides anticipated points during the exercise where dissemination of the exercise messages contained in Section 8.0 are appropriate. The scenario and timeline are suggested guidelines for the exercise and may be modified to meet site-specific conditions.

**Initial conditions (which are assumed to have occurred prior to exercise commencement):**

A shipment of LSA materials in the form of 55-gallon drums (Class 7 - Radioactive) is being transported by truck. The shipment originated from the Idaho National Engineering and Environmental Laboratory outside of Idaho Falls, Idaho and is being transported to a permitted LSA treatment/disposal site. The vehicle is traveling through the local area.
The truck has been involved in a single vehicle accident, resulting in the truck leaving the pavement and rolling onto its side on the road shoulder. Several straps have broken, resulting in the release of several drums. Two of the drums have broken open, releasing bags with magenta markings (radioactive material bags) in an area of approximately 100 square feet. One of the bags has broken open scattering debris (clothing, wipes, rags, scrap tools) throughout the area. The truck driver gets out of the vehicle and sits on the ground a short distance from the accident site.

*Delete the next sentence if you want to omit the medical injury:*  
The truck driver has sustained a fractured arm and a minor contusion on the forehead.

**Meteorological conditions summary:**
- Wind direction is “as read”
- Temperature is “as read”
- Wind speed is “as read”
- Assume rain is in the immediate forecast

NOTE: The assumption of rain may be omitted at the discretion of the Lead Controller, depending on weather conditions on the day of the exercise. See Section 10.0, Meteorology, for details.

**Exercise play begins at this point:**
A motorist (role player) in a vehicle in the vicinity of the (simulated) accident reports it, via cellular phone, to the local emergency response network (e.g., 911) dispatch center. The caller also reports that a truck has overturned, that several drums are on the ground with some bags near them, and that someone is sitting by the road near the truck.

Emergency response units should be dispatched to the incident scene, based on the information available, and transmitted via the notification/communications system. Initial emergency response units notified for deployment should include, at a minimum (either real or simulated), local police/sheriff’s department, fire department, and EMS. Any unit arriving with radiological monitoring equipment should demonstrate radiological monitoring/survey operations.

The units should not transit in an “emergency mode” (i.e., no lights or sirens) and should not take/perform any action that impacts the general public, such as establish unnecessary roadblocks or detours at or near the simulated accident scene. All arriving units should be timed (to determine “maximum” response time) and accounted for. Any unit arriving with radiological monitoring equipment should demonstrate radiological monitoring/survey operations.
LSA Exercise

The first emergency response unit to arrive should be from the police/sheriff’s department and should assume the position of Incident Commander (IC). They should establish initial control of the scene, cordon off the accident area, and set up traffic control or rerouting.

Within 5 minutes of the arrival of the first responding unit, the fire department and EMS should arrive. The Fire Chief should be briefed on the accident scene conditions by the initial responder. The Fire Chief should then assume the position of IC from the initial responder. A Command Post should be established along with lines of onsite and offsite communication. The IC should direct and provide personnel roles and responsibility designations. A site Safety Officer should be assigned to determine requirements for monitoring and PPE.

Emergency responders should assess the scene and plan/prepare for potential contamination hazards.

*Delete this paragraph if you want to omit the medical injury:*

*Emergency responders should assess the extent of injuries sustained by the truck driver, provide initial treatment and then transport him/her to the hospital. Emergency responders should use proper contamination control procedures.*

Responders should question the driver as to the location of the shipping papers and cause of the accident. The driver will have the shipping papers with him. The shipping papers contain the emergency response telephone number provided by the shipper.

An initial hazards assessment should be made of the scene. However, due to the unknown nature of the hazard and potential contamination from the release, personnel should not be allowed within direct proximity of the truck and spilled material. Appropriate monitoring equipment and PPE must be utilized for the physical site assessment. The IC should brief responders on the observed hazards at the scene prior to any response actions occurring.

A strategy for site safety and response actions should be developed in accordance with the guidelines set forth in the Emergency Response Guidebook (ERG). Proper site control and evacuation procedures should be implemented as outlined in ERG Guide 162. The Emergency Response Guidebook states, persons within 75 feet of the incident scene should be evacuated. Due to the threat of precipitation and the exposed contents of the breached radioactive material bags, responders should cover the released material with plastic to prevent possible contamination spread.

A resources assessment should be conducted by the IC/Safety Officer. The resource assessment should reveal monitoring equipment and appropriate PPE needed for additional site assessment. If monitoring equipment is available, the responders should don appropriate PPE and proceed with area surveys for possible contamination. If monitoring equipment is not available, the IC
should contact the local or state Radiation Authority for assistance. No further action should be taken at the site until monitoring occurs.

The IC should conduct emergency notifications or request these notifications be made by the dispatcher (e.g., emergency response phone number on the shipping papers). The shipper (role player simulating DOE) should provide technical data and response information specific to the material involved. This information is provided to the dispatcher and passed on to the IC. The shipper will also tell the dispatcher/IC that the DOE Radiological Assistance Program (RAP) Team should be deployed to the site within 1 hour.

The IC will discuss response resources and actions with the local or state Radiation Authority to determine the need for Hazardous Materials Response Team deployment. For the purpose of this exercise, the communication between the Radiation Authority and the IC will result in a decision to deploy the Hazardous Materials Response Team to the accident scene.

Upon completion of emergency response actions, the IC should direct responders to implement contamination control practices. Responders should establish a decontamination corridor and perform a survey or conduct a dry decontamination. The IC should direct responders who’ve entered the hot zone be separated and isolated until surveyed and determined to be clean.

Upon Hazardous Materials Response Team arrival, the team leader should report to the IC. The IC should provide a status briefing and make appropriate requests for radiological monitoring. The Hazardous Materials Response Team will verify that established contamination control practices were effective and decontamination has been completed. The Hazardous Materials Response Team will assist the IC in the development of a recovery plan. The recovery plan will identify needed response actions including survey needs, clean up plans, the documentation process, and the need for responder follow-up (whole body counting, dosimetry records, etc.). The accident scene will be surveyed by the Hazardous Materials Response Team or Radiation Authority (as applicable) to verify the accident area is free of contamination.

Upon their arrival, the RAP Team will be briefed by the IC and the Hazardous Materials Response Team leader explaining the status of the shipment, actions taken, and plans for recovery and clean up should be discussed. An exercise debriefing should be conducted upon termination of the exercise to provide evaluation results and lessons learned to all participating players.

The onsite portion of the exercise should be terminated upon determination by the Hazardous Materials Response Team or Radiation Authority (as applicable) that there is no contamination present at the scene and the IC has briefed the Hazardous Materials Response Team and RAP Team Captain explaining the status of the shipment, actions taken, and plans to complete the delivery of the packages. An exercise debriefing should be conducted upon termination of the exercise to provide evaluation results and lessons learned to all participating players.

### 8.0 MESSAGES

This section provides messages to be used during the exercise to ensure continuity of play. The messages provide critical scenario data.
MESSAGE 1

Initial Notification Call

TO: 911 Dispatcher
FROM: Motorist (Player)
TIME: (00:00)

NOTE: Call in this message via cell phone or CB upon Lead Controller authorization to commence the exercise. This message provides a “bystander” eye witness notification of the truck accident.

THIS IS AN EXERCISE. DO NOT initiate actions affecting safe operations.

Message:

“This is __________________. I am on highway ____, near mile marker ____, and there has been a truck wreck. The truck has overturned on its side. I see several drums on the ground near the truck, and some garbage bags scattered nearby.”

“There doesn’t appear to be any smoke or fire coming from the truck. Someone is sitting near the truck.”

“You had better get help out here fast.”

THIS IS AN EXERCISE. DO NOT initiate actions affecting safe operations.
MESSAGE 2

Incident Scene Message

TO: Truck driver (Player)
FROM: Incident Scene Controller
TIME: 00:00

NOTE: This message is used by the controllers to commence the exercise. Do not transmit this message without Lead Controller authorization. The truck driver should be able to describe to players how the accident occurred based on the incident scene location.

THIS IS AN EXERCISE. DO NOT initiate actions affecting safe operations.

Message:

As the exercise is started, the driver is sitting near the truck. As responders arrive inform them:

“I am the driver of the truck. I was hauling a shipment of Low Specific Activity Radioactive Material drums. I lost control of the truck and wrecked. I fell asleep and ran off the shoulder of the road where the road bends. I woke up and tried to pull it back onto the road but the wheels went over the edge of the embankment and I flipped. I was able to climb out of the passenger window. The truck turned over, spilling several drums on the roadside. Several of the drums have popped open releasing their contents. I did not come into contact with the spilled materials. I was able to get the shipping papers and get out of the truck.”

Delete the next two sentences if the medical injury will be omitted:

“When the truck tipped over, I bumped my head and hurt my arm. I think my arm may be broken.”

INCIDENT SCENE CONTROLLER NOTE: Show the driver (role player) the incident scene photo in Section 9.0 to help him/her understand what happened, and then explain to him/her how the props correspond to the scene set up.

THIS IS AN EXERCISE. DO NOT initiate actions affecting safe operations.
MESSAGE 3 (CONTINGENCY MESSAGE)

Initial Dispatch of Units

TO: Emergency Response Network Dispatcher
FROM: Dispatch Controller(s)
TIME: (00:05)

NOTE: Issue this message with concurrence of the Lead Controller if no actions have been or are being taken to dispatch emergency units (i.e., police, fire department, or EMS) to the incident scene.

THIS IS AN EXERCISE. DO NOT initiate actions affecting safe operations.

Message:

“For the purpose of this exercise, you are directed to dispatch the following emergency response units to the incident scene” (list only the applicable units that have not already been dispatched, as shown below):

- Fire Department
- Police Department
- Emergency Medical Service

THIS IS AN EXERCISE. DO NOT initiate actions affecting safe operations.
MESSAGE 4 (CONTINGENCY MESSAGE)

Responder Arrival to Scene, Initial Condition Assessment

TO: Responders at the Scene
FROM: Incident Scene Controllers
TIME: (00:15)

NOTE: This message serves to provide players with a description of simulated incident conditions. The police/sheriff should be first to arrive. Within 5 minutes, the remaining first responding units should arrive and be briefed. Information within this message will only be relayed to responders positioned within line of site of the specified conditions and if adequate props are not available. Use the photo in Section 9.0 if it does not give away unearned information to players and if it helps describe the props available or the absence of props, as applicable.

THIS IS AN EXERCISE. DO NOT initiate actions affecting safe operations.

Message:

For the purpose of the exercise the following information is to be provided to responders within line of site:

- The truck is lying on its side.
- Two of the drums on the ground have been compromised, and the contents have spilled. A number of bags are on the ground near the drums.
- No smoke or fire is coming from the truck.
- You see someone at the scene sitting on the ground away from the truck.

*Delete this sentence if the medical injury will be omitted:*

- The person sitting near the truck is holding his/her arm.

THIS IS AN EXERCISE. DO NOT initiate actions affecting safe operations.
MESSAGE 5 (CONTINGENCY MESSAGE)

Hazard Assessment

TO: Incident Commander
FROM: Lead Controller
TIME: (00:28)

NOTE: This message is to be given if play stalls during the hazard assessment phase. This message may be used to prompt the players to proceed with the exercise. Issue only those portions of the message that are appropriate (i.e., have not been considered or begun).

If the injury in the scenario is not omitted, issue this message before the driver (who has the shipping papers) is taken to the hospital.

THIS IS AN EXERCISE. DO NOT initiate actions affecting safe operations.

Message:

Issue only the applicable portions of the message below:

- For the purpose of this exercise, you are directed to request that the driver of the truck provide you with the shipping document information.
- You are directed to observe package markings, labels, and placards and use the information for hazard assessment purposes.
- You are also directed to determine if available resources are adequate for thorough site assessment and site control. If responders have not discussed or considered additional resources, prompt them to discuss the need for:
  - Shipper
  - State Radiation Authority
  - Hazardous Materials Team

THIS IS AN EXERCISE. DO NOT initiate actions affecting safe operations.
MESSAGE 6 (CONTINGENCY MESSAGE)

Shipper Information

TO: Emergency Network Dispatcher or Incident Commander (as applicable)
FROM: Dispatcher Controller or Lead Controller (as applicable)
TIME: (00:50)

NOTE: This message serves to ensure that technical information from the shipper is received by the Incident Commander. Issue the applicable portion(s) of this message as described in italics below.

THIS IS AN EXERCISE. DO NOT initiate actions affecting safe operations.

Message:

PART 1: Issue this portion to the IC or dispatcher, as applicable, if the IC does not call the shipper directly from the Command Post or ask the dispatcher to contact the shipper within a reasonable amount of time, or if the dispatcher has been asked to contact the shipper but has not done so in a reasonable amount of time.

“For the purpose of this exercise, you are directed to contact the shipper using the emergency response number (as listed on shipping documents or as provided to the IC).”

PART 2: Issue this portion of the message if action is taken by the IC or dispatcher to contact the shipper, but the shipper is not playing or being simulated by a role player.

“The material is radioactive material, LSA, n.o.s., UN 2912, response guide 162. Cordon off the area, isolate the area 75 feet in all directions, have response personnel remain upwind, and do not try to clean up the site. Remain outside of the area of release. A Radiological Assistance Program Team is being deployed and should arrive within 1 hour.”
MESSAGE 6 (CONTINGENCY MESSAGE) - continued

PART 3: Issue this portion of the message if the dispatcher contacts the shipper (actual or role player) but the dispatcher does not relay technical information back to the IC in a reasonable time.

“For the purpose of this exercise, you are directed to contact the IC and relay the technical information provided to you by the shipper.”

CONTROLLER NOTE: The following note only applies to the controller who is role playing the shipper. The information should only be released if the IC, dispatcher, or another player requests this information from the shipper through the emergency telephone number contact. “The material being shipped is radioactive waste (e.g., protective clothing, tools, etc.). The drums do not contain Uranium or Thorium metal cuttings. The drums do not contain nitrates or oxidizers.”

THIS IS AN EXERCISE. DO NOT initiate actions affecting safe operations.
MESSAGE 7 (CONTINGENCY MESSAGE)

Response Team Briefing with the Incident Commander

TO: Incident Commander
FROM: Lead Controller
TIME: (01:20)

NOTE: The purpose of this message is to ensure the Hazardous Materials Response Team is integrated into the Incident Command System after their arrival. If an actual or simulated (by role players) Hazardous Materials Response Team is participating, this message will be used to prompt the IC to give a situation briefing to the Hazardous Materials Response Team if the IC does not initiate this action within approximately 10 minutes of Hazardous Materials Response Team arrival. If the Hazardous Materials Response Team is being simulated and no role players are available, the Lead Controller will simulate the team and request a turnover briefing using the second portion of this message.

THIS IS AN EXERCISE. DO NOT initiate actions affecting safe operations.

Message:

Issue this portion of the message ONLY if the Hazardous Materials Response Team (actual or role players) has been at the Command Post for approximately 10 minutes and the Incident Commander has not shown any initiative to provide the team with a briefing and integrate them into the response activities:

“For the purpose of the exercise being conducted today, you are directed to give the members of the Hazardous Materials Response Team a briefing and then integrate them into the response activities.”

Issue this portion of the message ONLY if the Hazardous Materials Response Team is being simulated by the Lead Controller:

“For the purpose of the exercise being conducted today, I am role playing the Hazardous Materials Response Team. Please provide me with a briefing at this time.”

THIS IS AN EXERCISE. DO NOT initiate actions affecting safe operations.
MESSAGE 8A

Hold Message 1

TO: All Players
FROM: Lead Controller
TIME: Upon Suspension of Exercise Play

NOTE: DO NOT issue this message without authorization from the Lead Controller.

Continuation of the exercise play will occur upon coordination and concurrence between the Lead Controller and the Field Controllers. Exercise play will resume at the direction of the Lead Controller approximately 5 minutes after message 8b is issued.

THIS IS AN EXERCISE. DO NOT initiate actions affecting safe operations.

Message:

“Attention all personnel. Attention all personnel.”

“The exercise has been suspended. All personnel are to remain in their current location. Emergency Responders are not to discuss exercise activities during this suspension. Stand by for further instruction regarding exercise activities.”

Make this announcement every 5 minutes.

THIS IS AN EXERCISE. DO NOT initiate actions affecting safe operations.
MESSAGE 8B

Hold Message 2

TO: All Players
FROM: Lead Controller
TIME: Upon Suspension of Exercise Play

NOTE: DO NOT issue this message without authorization from the Lead Controller.

Continuation of the exercise play will occur upon coordination and concurrence between the Lead Controller and the Field Controllers. Exercise play will resume at the direction of the Lead Controller approximately 5 minutes after this message is issued. Controllers should use the 5 minutes prior to exercise continuation to remind players of what was occurring when play was suspended.

THIS IS AN EXERCISE. DO NOT initiate actions affecting safe operations.

Message:

“Attention all personnel. Attention all personnel.”

“Exercise activities will resume in 5 minutes. The exercise controllers will provide information to players prior to continuing the exercise.”

THIS IS AN EXERCISE. DO NOT initiate actions affecting safe operations.
MESSAGE 9

Termination Message

TO: All Key Players/Notification Locations
FROM: Lead Controller
TIME: (01:30)

NOTE: Ensure all participating agencies are notified of exercise termination via the notification system.

THIS IS AN EXERCISE. DO NOT initiate actions affecting safe operations.

Message:

“The LSA Materials Exercise is now terminated. Please make all necessary termination notifications. An exercise debriefing will be conducted at _________________ (location) at _____________ (time).” (Repeat Message)

THIS IS AN EXERCISE. DO NOT initiate actions affecting safe operations.
9.0 RADIOLOGICAL DATA
Included in this section are:
- Scene Description
- Radiation/Contamination Data

Scene Description
A shipment of LSA materials in the form of 55-gallon drums (Class 7 - Radioactive) is being transported by truck. The shipment originated from the Idaho National Engineering and Environmental Laboratory and is being transported to a permitted LSA treatment/disposal site. The vehicle is traveling through the local area. The LSA truck is involved in a single vehicle accident, resulting in the truck leaving the pavement and rolling onto its side on the road shoulder. Several straps have broken, resulting in the release of several drums.

Radiation/Contamination Data
See Appendix D for a Radiological Data Worksheet. The controller should take notice of which type of detector/probe is attached to the responder's instrument or the type of survey instrument used (radiation/contamination) as applicable. The controller should ask the responder (based upon which instrument or probe is used) how they would report their readings (i.e., in cpm or mR/hr). If a contamination survey instrument is used, readings should be requested and given in counts per minute. If a radiation survey instrument is used, the readings should be requested and given in mR/hr. Responders should realize that direct readings for contamination cannot be taken on the bags because of the radiation penetrating through the bags. Contamination surveys should be taken by wiping or smearing the bags and then checking each wipe for contamination in a low background area (i.e., away from the bags).

One of the bags of simulated LSA material will be torn open with material (clothing, wipes, rags, scrap tools) scattered throughout the area, as shown in the photo (Figure 1) on the following page. If/when radiological monitoring surveys are performed (by the first responding unit(s) or the Hazardous Materials Response Team) the following radiation/contamination levels will be found:

In close proximity (along a 30-foot path between the bag and the truck) to the damaged LSA bag, using a pancake probe or contamination survey instrument to directly survey the road surface, personnel will detect between 200 and 400 cpm of contamination. On contact with any spilled material, readings will range from 1,500 to 25,000 cpm. If responders try to take direct readings on the roadway surface with the contamination survey instrument in close proximity to the LSA bags, readings should be reported as significantly higher due to increased background radiation from the bags. Readings taken on contact with the damaged LSA bag will be 150,000 cpm to off-scale if contamination survey instrument is used. If the responder takes open/closed window readings with an appropriately equipped survey instrument, readings will be from 50 to 100 mR/
hr open window and 5 to 10 mR/hr closed window. Radiation readings on other non-damaged bags will have dose rates within the same range. If non-damaged bags are smeared for contamination and smears are checked in low background area, no contamination will be found.

Controllers should only give radiological data to players if and when they use their survey equipment properly. For instance, if players do not turn their equipment on, or are not on the proper scale, controllers should indicate to them that their instruments are reading zero/off scale as appropriate. Controllers should take note of whether players use their equipment properly (i.e., are instruments turned on and on the proper scale), but should not prompt them to do so.

Figure 1: Suggested Site Layout

10.0 METEOROLOGICAL DATA
All weather conditions for this exercise are “as read,” with the exception of rain in the forecast. If rain is actually occurring when exercise play begins, play meteorology “live.” If actual meteorology calls for snow (or another form of precipitation different from rain), the Lead Controller may, at his/her discretion, modify the initial conditions calling for rain. Exercise play will be suspended for certain adverse weather conditions as described in the Safety Plan as outlined in Appendix A.
11.0 PUBLIC INFORMATION DATA
There are no public information (exercise play) activities for this exercise. Refer any/all “actual”
general public and/or media inquiries to the “Media Coordinator.” The exercise point of contact
is determined during the first exercise planning meeting.

12.0 PROPS
NOTE: You may decide to use signs, flags, and/or traffic cones as “props” in lieu of an actual truck,
based on your budget and logistical considerations.
- Truck - May use a truck that is upright
- Four Class 7 · Radioactive Material Placards
- Several 55-gallon drums and released radioactive material bags and contents
- An example LSA label is provided with the radiological data in Appendix D
- Shipping papers and the Emergency Response Guidebook Guide 162, are provided with the
radiological data in Appendix D
- Delete this sentence if the medical injury is omitted:
  - Moulage for head contusion and broken arm

13.0 SIMULATIONS
Most exercise activities will actually be performed as if the incidents were really occurring. The
following list identifies the actions to be simulated. Additionally, controllers may direct
participants to simulate certain activities to avoid performing actions that may cause adverse
effects.
- Accident scene(s), damaged equipment, injured personnel, and other simulations may be
accomplished through the use of a sign(s) indicating the truck wreck location, etc. Props,
mock-ups, and victim role players should be used in this exercise.
- No public notification or any other actions affecting the general public should be implemented.
- Safety roadblocks or detours may be physically established prior to the exercise to enhance
safety.
- Additional roadblock locations should be established by appropriate agencies for traffic
control and player safety.
- Some roles and notification phone numbers may be simulated depending upon agencies that
are participating. Simulated roles may include the Hazardous Materials Response Team,
federal agencies, the shipper, and agencies other than local emergency responders. These
simulations shall be accomplished through the use of role players and assigned phone numbers
to role players.
- The truck, drums, and released materials will be simulated using appropriate props.
- Transport of the injured truck driver to the hospital may be simulated if the local hospitals are
not participating in the exercise.
14.0 SECURITY
If necessary (depending on the location of your incident scene), some local law enforcement personnel (non-players) may be pre-staged at the scene for scene safety reasons (i.e., reroute traffic away from the simulated scene). However, the impact of the exercise on the general public should be kept at a minimum. Law Enforcement units and personnel who are actually dispatched as part of exercise play should report to locations as directed for scene control. However, these units should NOT actually establish barricades or cordons that would affect the general public. Public Safety/Security Controllers will determine the effectiveness of law enforcement activities by noting the arrival times, locations, and simulated activities of these units.

15.0 MEDICAL DATA
NOTE: Remove this entire section from the scenario package if the medical injury will be omitted.

The driver role player should be alert and fully able to describe to any player who asks how the simulated accident occurred, using a plausible explanation based on the incident scene chosen. One possible explanation is: “I fell asleep and ran off the shoulder of the road where the road bends. I woke up and tried to pull it back onto the road, but the wheels went over the edge of the embankment, and I flipped. I was able to climb out of the passenger window.” The truck driver’s injuries consist of a fractured (closed) arm and a mild head contusion (bump). He/she does not come into contact with any of the LSA drums or radiological material bags that are scattered on the ground near the truck, and he/she was able to bring the shipping documents out of the vehicle. When EMS arrives, the radiation hazard will have been discovered and EMS personnel should take the necessary precautions to prevent the possible spread of contamination.

The following medical message will be used by the EMS Controller to relay information to the EMS/medical players. Medical play will terminate when the victim is loaded onto the ambulance. Actual transport of the victim (role player) to the hospital will be simulated.
MEDICAL MESSAGE 1
FRACUTURED ARM AND MILD HEAD INJURY

TO: First Responders/EMS
FROM: EMS Controller
TIME: Upon Arrival of Medical Personnel

NOTE: This data applies to a patient with a fractured arm and a mild head injury. Do not provide this data to players unless the means to obtain it are demonstrated.

THIS IS AN EXERCISE. DO NOT initiate actions affecting safe operations.

Message:

Patient complains of point tenderness with edema (swelling) present at pain location on his left arm. Movement of the extremity is present. Distal pulses and sensation are present. Patient also suffered a mild blow to the head. Small hematoma noted at impact site, with no deformity or loss of consciousness.

Expected Action:
Follow local protocols or standing orders.

THIS IS AN EXERCISE. DO NOT initiate actions affecting safe operations.
APPENDIX A
EXERCISE CHECKLIST FOR PLANNING AND SAFETY

Exercise Date ____________________

Phase 1 - Planning

1. _______ Determine the scope, objectives and extent of play for the exercise (exercise may be modified to meet local needs and objectives)
2. _______ Determine exercise participants
3. _______ Establish schedule and plan for the exercise
4. _______ Notify proposed participating agencies and confirm support
5. _______ Determine locations for exercise activities (command center, accident scene, dispatcher’s office, etc.)
6. _______ Develop a safety plan (use Exercise Checklist for Planning and Safety/Appendix A)
7. _______ Determine if pre-notification to the media is necessary (if a sample media plan is needed, refer to the DOE web site shown above to obtain information on Guidance for Planning, Conducting and Evaluating Transportation Emergency Preparedness Exercises. If further emergency information is needed, please contact a Public Information Officer to handle notifications/inquiries.
8. _______ Establish controller assignments and simulated roles
9. _______ Review the Exercise Evaluation Form for each objective found in Appendix B with participating agencies to ensure the objective will be completed as part of exercise play.
10. _______ Modify the shipping document included in Appendix D to include exercise specific information (such as the emergency response phone number). Ensure the shipping documents and packages have necessary information, labels or markings.
11. _______ Reproduce sufficient copies of completed/reviewed scenario packages, as well as copies of the applicable Exercise Evaluation Forms.
12. _______ Determine and acquire props needed for site simulation
13. _______ Conduct player and observer briefings
LSA Exercise

Phase 2 - Exercise Setup
1. _______ Ensure all controllers know the schedule and their designated position
2. _______ Ensure all props have been evaluated and validated prior to set up
3. _______ Install the props at each exercise location
4. _______ Ensure safety precautions are in place
5. _______ Verify all controllers are in position and key players/agencies are available to start

Phase 3 - Exercise Play
1. _______ Ensure safety is, and remains, the most important concern of the exercise
2. _______ Ensure controllers are in place
3. _______ Ensure messages are distributed according to schedule
4. _______ Utilize hold messages if a break in play is needed
5. _______ Ensure ALL players and controllers at all exercise locations receive the exercise termination message

Phase 4 - Post Exercise Activities
1. _______ Dismantle exercise scene props and return site to original state
2. _______ Direct all players and controllers to the debriefing location(s)
3. _______ Conduct exercise debriefing based on controller and player evaluations
4. _______ Document and track exercise strengths and recommended improvement areas

SAFETY PLAN AND CHECKLIST
The example Safety Plan and Checklist presented here is for a transportation emergency exercise. The example is generic, and may not be complete for your jurisdiction. Take time to identify and include necessary event-specific information.

SAFETY PLAN SCOPE
This plan has been included as a scenario package checklist so that controllers will be able to anticipate and recognize unplanned events that could result in personal injury or unforeseen property damage. It enables event participants to be governed by the safety guidelines established for the event.

PRE-EXERCISE SAFETY REQUIREMENTS
Controllers must be staged before the event is scheduled to begin to ensure there are no preexisting safety concerns that could affect the start of the event. Controller assignments and locations are identified at the end if this Appendix (page 40). The exercise Lead Controller must obtain a status of any identified safety concerns from all lead controllers prior to event commencement.
EXERCISE ACTIVITY BOUNDARIES AND OFF-LIMIT AREAS
Exercise boundaries, which define the areas at the incident scene that will be in and out of play, will be discussed in briefings, if applicable. Boundaries may also be defined by the “extent of play” for each objective, as shown in Section 3.0, Objectives. Safety concerns that arise during the exercise will be dealt with immediately by the exercise controllers in the affected area. As objectives are accomplished, certain areas may be allowed to return to normal activities.

SAFETY EQUIPMENT
Exercise participants are required to follow all existing safety guidelines for the use of protective equipment. From the checklist below, mark an X next to the items that are applicable to this exercise, and ensure that these items are provided for participants, as needed.

- Controller communications (e.g., radios, cell phones, etc.)
- Exercise identification (i.e., armbands, vests, caps, etc.)
- Illumination devices
- First aid kit
- Water coolers (field teams may be directed to carry their own water)
- Water carriers (rovers may be directed to deliver water to personnel)
- Personnel comfort items (specify)
- Fire extinguishers
- Safety harnesses/lifelines, etc. (specify)
- Eye/hearing protection devices (specify)
- Gloves (specify who and when they should be worn)
- Hard hats (specify who and when they should be worn)
- Other protective clothing (specify)
- Miscellaneous hand tools (specify)

SITE SPECIFIC HAZARDS
Exercise participants are required to follow all hazard postings in event areas. Participants must obey all traffic laws during the event. Response participants will NOT use emergency lights and sirens when responding to simulated accident scenes. No vehicles should go off road where wildlife, such as snakes and insects, may be encountered. In the event of electrical storms, high winds or other severe weather, participants will follow controller instructions. Field activities should be suspended or terminated under these conditions.

Controllers and responders must be mindful of symptoms of heat stress and hypothermia. Controllers will ensure that emergency response personnel are allowed the opportunity to rest whenever necessary. Controllers must halt exercise play anytime a responder appears to be in distress, and take all appropriate actions to ensure the well-being of individuals.
From the checklist below, mark an X next to the actual hazards that may be applicable to this exercise. Special safety provisions should be made for all items checked.

- Traffic (field teams need to be aware of road condition hazards and traffic, especially when performing radiological monitoring)
- Terrain (field teams may be required to use unpaved roads. Each vehicle will be equipped with a fire extinguisher, shovel, bucket, and communications capabilities)
- Overhead obstructions and hazards (i.e., power lines)
- Electrical storms
- Heat stress
- Cold stress (hypothermia)
- High winds
- Visibility conditions
- Electrical equipment hazards
- Mechanical equipment/machinery
- Hazardous material/storage areas
- Fuel loading concerns
- Thermal hazards
- Tripping hazards
- Confined spaces
- Elevated locations
- Hazardous materials
- Pest control (i.e., ants, wasps, snakes, ticks, mosquitoes, etc.)
- Personnel safety provisions (individual responsibilities/limits)
- Outside agency safety provisions (responsibilities/limits)
- Vehicle safety provisions (i.e., traffic laws shall be obeyed, seat belts used, etc.)
- Exercise control provisions (i.e., safety briefings, how to handle actual emergencies, etc.)
- Vehicle props are safe, fuel tanks drained, combustible materials removed if a fire is planned, broken glass has been removed or made safe

GENERAL SAFETY PROVISIONS
This section details specialized personnel assignments and functions related to safety concerns. Section 6.0, Conduct, of this scenario describes the controller organization, Page 40 provides an example listing of controllers and assignments. No changes will be made to controller assignments without prior assurance that any replacements have equal or greater understanding of safety concerns that could be encountered at the location to which they are assigned.

All safety concerns must be brought to the attention of the exercise Lead Controller and the exercise Safety Leader through the Controller Communications Network. Incidents and materials that may have adverse effects on people have been addressed in this section of the scenario manual.
Every effort has been made to anticipate and minimize hazardous situations inherent in this exercise. From the checklist below, mark an X next to the safety provisions that are applicable to this exercise, and ensure that these provisions are communicated to participants and/or enforced.

________ Individual participants are personally responsible for their own safety
________ Each participant must monitor his/her own physical condition for signs of over exertion or distress
________ Any participant who observes another person injured or otherwise in need of assistance will immediately cease exercise activities and render aid/call for assistance
________ All injuries, no matter how slight, must be immediately reported to the nearest controller
________ All ascents or descents from elevated heights will be by ladder, stairway, or other safe method. Jumping from elevated positions is not allowed
________ Controllers must be familiar with the hazards of the equipment involved and the required safety measures
________ Actual emergencies will be dealt with by a shadow force. If an emergency occurs that requires exercise responders to assist, the Lead Controller will suspend or terminate part or all of exercise play as deemed necessary

SECURITY/PUBLIC SAFETY PROVISIONS
From the checklist below, mark an X next to the security and public safety provisions that are applicable to this exercise. Special safety provisions should be made for all items checked.
________ A backup or shadow force (fire, EMS, and police) is in place to ensure community coverage is not impacted by event response
________ Event calls should/may go to non-emergency lines to ensure that actual “911” law enforcement calls are handled expeditiously
________ Law Enforcement personnel must keep firearms holstered at all times during the exercise
________ Exercise play will be suspended in the event of an actual emergency
________ Emergency vehicles will respond without lights and sirens
________ Cordonning off of large public areas will be simulated unless cordonning is required for safety reasons
________ Rerouting traffic will be simulated unless cordonning is required for safety reasons

VEHICLE SAFETY PROVISIONS
From the checklist below, mark an X next to the vehicle safety provisions that are applicable to this exercise. Ensure that these provisions are communicated to participants and/or enforced.
________ No vehicle will be driven in such a manner that posted speed limits are exceeded or safe driving rules are violated
________ Only those vehicles involved in the exercise will be used for movement
LSA Exercise

__________ Vehicles may not be mounted or dismounted until they come to a complete stop
__________ Spotters will be used when backing vehicles out of areas where other people or
vehicles are present
__________ Roadblocks will be simulated by placing a blocking vehicle on the shoulder of the
road and notifying an observer that a roadblock has been established
__________ All controller vehicles should be identified/placarded to eliminate player confusion
or concerns
__________ Seat belts must be worn in moving vehicles

EXERCISE SIGNATURE PAGE
A copy of the completed Exercise Scenario and any final report should be filed by the host agency
to document the planning and conduct of this exercise.

LSA Exercise

APPENDIX B
EXERCISE EVALUATION FORM

Date: ______________________
Exercise Location: _____________________________________________________
Evaluator/Controller Name:_________________ ______________________________

OBJECTIVE 1: INITIAL NOTIFICATION OF RESPONSE AGENCIES AND RESPONSE PERSONNEL
Demonstrate the ability to notify response agencies and to mobilize emergency personnel.

POINTS OF REVIEW

1. Which organization provided initial notification of the incident accident?
   _______________________________________________________________________
   _______________________________________________________________________

2. When did this occur?
   _______________________________________________________________________
   _______________________________________________________________________

3. Which organizations/individuals received this notification? When?
   Organization/Individuals ____________________________________ Time ______

4. Which notified organization(s) was responsible for notifying other necessary response elements?
   _______________________________________________________________________

5. Which organization provided notification of the incident/accident to external response support organizations?
   _______________________________________________________________________
   _______________________________________________________________________

6. If external response support notifications were made, indicate which organization/individual was contacted and the time of the notifications.
   Organization/Individuals ___________________________________ Time ______

7. Did the response organization mobilize initial response personnel?
   YES  NO  N/A  N/O  Time ______
OBJECTIVE 1: INITIAL NOTIFICATION OF RESPONSE AGENCIES AND RESPONSE PERSONNEL (continued)

8. If so, were the types and numbers of personnel mobilized related to the classification level of the emergency?

   YES   NO   N/A   N/O   Time _______

9. If not, how were the types and numbers of personnel determined?

   __________________________________________________________________________
   __________________________________________________________________________
   __________________________________________________________________________
   __________________________________________________________________________

10. Through what means were the personnel mobilized?

   __________________________________________________________________________
   __________________________________________________________________________
   __________________________________________________________________________
   __________________________________________________________________________

11. At what time did the mobilization process start and end for the responding organizations and personnel?

   Organization
   __________________________________________________________________________

   Mobilization Started _______   Ended _______

12. At what time did the mobilized staff start arriving at their duty stations?

   __________________________________________________________________________
   __________________________________________________________________________
   __________________________________________________________________________

13. At what time were most of the key positions filled?

   __________________________________________________________________________
   __________________________________________________________________________
   __________________________________________________________________________
EXERCISE EVALUATION FORM

Date: ______________________
Exercise Location: ____________________________________________________
Evaluator/Controller Name: ______________________________________________

OBJECTIVE 2: DIRECTION AND CONTROL
Demonstrate the ability to direct, coordinate, and control emergency response activities through operations of an incident command system (ICS) and other direction and control structures.

POINTS OF REVIEW

1. Which position within the response organization did you evaluate?
   _____ Incident Commander
   _____ Emergency Management Director (EMD) at EOC
   _____ Other designated personnel with leadership role in response organization
   (List positions ________________________________________________________________)

2. Check those actions which the Incident Commander accomplished in accordance with his/her agency response plan:
   _____ Established a visible command post
   _____ Established communications with offsite organizations
   _____ Provided information about the incident/accident to offsite response authorities
   _____ Assumed responsibility for the management of operations at the incident/accident site by a site-specific IC
   _____ Established an organizational structure for the management of on-scene response operations, including delegations of authority
   _____ Coordinated with personnel at the EOC or other offsite response authorities
   _____ Managed the ICS interface with the operations of Federal On-Scene Coordinator
   _____ Provided direction and control to all organizations responsible for response actions at the incident/accident site

3. Check those actions which the Incident Commander/EMD/or other designated personnel with a leadership role in the response organization accomplished:
   _____ Issued instructions to staff on response operations
   _____ Provided directions on adherence to the plan
   _____ Coordinated with and disseminated information to offsite response organizations or any command of the offsite response effort
   _____ Resolved conflicts
   _____ Provided leadership in decision making
   _____ Consulted with staff
   _____ Provided needed authorities for emergency action
   _____ Directed or coordinated with other response organizations
EXERCISE EVALUATION FORM

Date: ______________________
Exercise Location: ______________________________________________________
Evaluator/Controller Name: ________________________________________________

OBJECTIVE 3: INCIDENT ASSESSMENT
Demonstrate the ability to identify the hazardous material(s) involved in an incident/accident and to assess the hazards associated with the material involved during both the emergency and post-emergency phases.

POINTS OF REVIEW

1. Who performed the initial incident assessment?

________________________________________________________________________

2. Check the type of information that was obtained during the initial assessment:
   _____ Type of container, package, etc. involved
   (List__________________________________________)
   _____ Extent of damage
   _____ Estimated quantity of material involved
   _____ Shipping papers or MSDS’s secured
   _____ Placards, identification numbers, markings, labels
   _____ Information from knowledgeable persons

3. Did the response organization consult various emergency response resources for initial response information?

   YES        NO        N/A        N/O        Time ______

4. List which resources were consulted?

________________________________________________________________________

5. Check those organizations that were contacted for additional assistance or response information:
   _____ CHEMTREC/CHEMTEL
   _____ The shipper
   _____ The transportation company
   _____ Facility management
   _____ Outside expert’s computer and/or manual databases
   _____ Other (List__________________________________________)

OBJECTIVE 3: INCIDENT ASSESSMENT (continued)

6. Did the response organization report the observed field data to other response units?

   YES   NO   N/A   N/O   Time _______

7. If yes, to which organizations?

   _______________________________________________________________________
   _______________________________________________________________________
   _______________________________________________________________________

8. Was the affected area secured?

   YES   NO   N/A   N/O   Time _______

9. Who performed the ongoing incident assessment? __________________________

10. Did the response organization assess the potential hazards both at the affected sites and to adjacent areas?

    YES   NO   N/A   N/O

11. Check the following physical factors affecting the release that the response organization assessed:

    ____ The material state (liquid, gas, solid)
    ____ Actual and projected release rate
    ____ Direction of the material released in air or water
    ____ The physical factors associated with the natural setting

12. Check the strategies the response organization used to assess hazards:

    ____ Established a priority for monitoring airborne toxic substances
    ____ Developed a strategy for monitoring and using direct reading instruments
    ____ Maintained monitoring capabilities for the duration of the release
    ____ Identified and responded to atmospheric and geographic conditions
    ____ Obtained environmental samples
    ____ Analyzed the samples
    ____ Supplemented field monitoring data with assessment data that are based on various computer models
OBJECTIVE 3: INCIDENT ASSESSMENT (continued)

13. Who was responsible for field monitoring activities?

___________________________________________________________________________________________________
___________________________________________________________________________________________________
___________________________________________________________________________________________________

14. What procedures were implemented by the field monitoring teams?

___________________________________________________________________________________________________
___________________________________________________________________________________________________
___________________________________________________________________________________________________

15. Did the response organization use the analysis of the field samples to guide decision makers in developing protective actions for the responders and for the general public?

   YES   NO   N/A   N/O
LSA Exercise

EXERCISE EVALUATION FORM

Date: ______________________
Exercise Location: ______________________________________________________
Evaluator/Controller Name: ______________________________________________

OBJECTIVE 4: RESOURCE MANAGEMENT
Demonstrate the ability to mobilize and manage resources required for emergency response.

POINTS OF REVIEW
1. Did the response organization determine the resources that it required to respond to the incident/accident?
   YES  NO  N/A  N/O
   How was this accomplished?
   ______________________________________________________________________
   ______________________________________________________________________
   ______________________________________________________________________

2. Was this process triggered by development of a strategy for containing the incident/accident?
   YES  NO

3. When did the organization start and finish this process of identifying the required resources?
   ______________________________________________________________________
   ______________________________________________________________________
   ______________________________________________________________________

4. Was this process completed in time to be supportive of the implementation of a response strategy?
   YES  NO

5. Did the organization contact local resource providers and request necessary resources?
   YES  NO  N/A  N/O
OBJECTIVE 4: RESOURCE MANAGEMENT (continued)

6. When did this process start and end?
___________________________________________________________________________________________
___________________________________________________________________________________________
___________________________________________________________________________________________
___________________________________________________________________________________________

7. Were these calls placed to a control cell or to providers?
___________________________________________________________________________________________
___________________________________________________________________________________________
___________________________________________________________________________________________
___________________________________________________________________________________________

8. If calls were made to providers, did the response organization use up-to-date and accurate lists of telephone numbers and points of contacts?

YES  NO  N/A  N/O

9. What types of resources were requested?
___________________________________________________________________________________________
___________________________________________________________________________________________
___________________________________________________________________________________________
___________________________________________________________________________________________

10. Which local resource providers were contacted?
___________________________________________________________________________________________
___________________________________________________________________________________________
___________________________________________________________________________________________
___________________________________________________________________________________________

11. Did the organization contact external resource providers and request necessary resources?

YES  NO  N/A  N/O

12. When did this process start and end?
___________________________________________________________________________________________
___________________________________________________________________________________________
___________________________________________________________________________________________
___________________________________________________________________________________________

13. Were these calls placed to a control cell or to providers?
___________________________________________________________________________________________
___________________________________________________________________________________________
___________________________________________________________________________________________
**OBJECTIVE 4: RESOURCE MANAGEMENT (continued)**

14. If calls were made to providers, did the response organization use up-to-date and accurate lists of telephone numbers and points of contacts?

   YES  NO  N/A  N/O

15. What types of resources were requested?

   __________________________________________________________
   __________________________________________________________
   __________________________________________________________
   __________________________________________________________

16. Which external organizations were contacted?

   __________________________________________________________
   __________________________________________________________
   __________________________________________________________
   __________________________________________________________
   __________________________________________________________

17. Did any of the contacted local resource providers deploy any resources to the site of the incident/accident?

   YES  NO  N/A  N/O

18. Which providers?_____________________________________________________

   What resources? ____________________________________________________

   Organization/Individuals _____________________________________________

   When did they arrive? ______________________________________________

19. Were they the resources requested?

   YES  NO  N/A  N/O

20. Did any of the contacted external resource providers deploy any resources to the site of the incident/accident?

   YES  NO  N/A  N/O
OBJECTIVE 4: RESOURCE MANAGEMENT (continued)

21. Which providers?_____________________________________________________

What resources? _______________________________________________________

When did they arrive? __________________________________________________

22. Were they the resources requested?

YES NO N/A N/O

23. Did the IC demonstrate the capability to integrate any deployed external resources into the response effort?

YES NO N/A N/O

24. Did the organization demonstrate procedures for securing replacement resources of:

_____ Equipment YES NO
_____ Personnel YES NO
_____ Supplies YES NO

25. If the organization demonstrated procedures for any of the above, did it contact the providers for additional resources?

YES NO N/A N/O

26. Did the providers deploy any additional resources?

YES NO N/A N/O

27. Which resources were deployed?

________________________________________________________________________
________________________________________________________________________
________________________________________________________________________
LSA Exercise

OBJECTIVE 4: RESOURCE MANAGEMENT (continued)

28. Did the organization demonstrate a shift change?

   YES  NO  N/A  N/O  Time ________

29. Was an individual/organization designated to keep record of resources expended?

   YES  NO  N/A  N/O

30. Was an individual/organization designated to record the expenditure of funds in support of the response?

   YES  NO  N/A  N/O

31. Identify the individual(s)/organization(s) responsible for such record keeping.

   _________________________________________________________________
   _________________________________________________________________
   _________________________________________________________________
   _________________________________________________________________
EXERCISE EVALUATION FORM

Date: ______________________
Exercise Location: ______________________________________________________
Evaluator/Controller Name: ______________________________________________

OBJECTIVE 5: COMMUNICATIONS
Demonstrate the ability to establish and maintain communications essential to support response to an incident/accident.

POINTS OF REVIEW
1. Check those response units the Incident Commander (IC) established communications with:
   _____ The first responding units at the incident/accident site
   _____ Field teams engaged in operations at the incident/accident location
   _____ All response organizations whose support is requested by the IC
   _____ All newly arriving response organizations (including those from other jurisdictions)
   _____ The commanders of all major response organizations
   _____ Offsite sources of advice and assistance in the identification of the hazardous materials, and the development and implementation of a strategy for containment, cleanup, and recovery
   _____ Other (List____________________________________________________)

2. Regarding the above response units, were the communications links maintained at a functioning level in support of the IC and the supporting response units?
   YES        NO      N/A       N/O

3. Did the IC use the established communication linkages for the performance of his direction and control responsibilities?
   YES        NO      N/A       N/O

4. Were the communications links between these locations able to handle all necessary traffic?
   YES        NO      N/A       N/O

5. Did the EOC staff quickly establish and maintain effective communications throughout the response effort with the IC and response units under the direction of the EOC staff?
   YES        NO      N/A       N/O
OBJECTIVE 5: COMMUNICATIONS (continued)

6. Were the communications links between these locations able to handle all necessary traffic?

| YES | NO | N/A | N/O |

7. Were response organizations functioning at locations removed from the IC and EOC able to develop effective lines of communication (to communicate with each other)?

| YES | NO | N/A | N/O |

8. Did the response organization use the communications system to provide direction and control to the organizations under their command?

| YES | NO | N/A | N/O |

9. Did the response organization use the communications system to coordinate their activities with other organizations?

| YES | NO | N/A | N/O |
EXERCISE EVALUATION FORM

Date: ______________________
Exercise Location: ______________________________________________________
Evaluator/Controller Name: ______________________________________________

**OBJECTIVE 10: RESPONSE PERSONNEL SAFETY**
Demonstrate the ability to protect emergency responder health and safety.

**POINTS OF REVIEW**

1. Did the response organization establish and maintain one or more zones to regulate the movement of personnel in and out of the site?
   
   YES  
   NO  
   N/A  
   N/O  
   Time ______

2. Did the response organization establish barriers around a restricted zone or “hot zone?”

   YES  
   NO  
   N/A  
   N/O  
   Time ______

3. Were the boundaries of that zone clearly visible to all response personnel?

   YES  
   NO  
   N/A  
   N/O

4. Did the response organization limit the number of personnel allowed in the restricted zone?

   YES  
   NO  
   N/A  
   N/O

5. Did the response organization limit the amount of time each responder remained in that zone?

   YES  
   NO  
   N/A  
   N/O

6. Did the response organization provide protective equipment and clothing to responders?

   YES  
   NO  
   N/A  
   N/O

7. Was the type of equipment provided based upon the organization’s safety and health plan?

   YES  
   NO  
   N/A  
   N/O
OBJECTIVE 10: RESPONSE PERSONNEL SAFETY (continued)

List equipment.

_____________________________________________________________________________________________________________________
_____________________________________________________________________________________________________________________
_____________________________________________________________________________________________________________________
_____________________________________________________________________________________________________________________
_____________________________________________________________________________________________________________________
_____________________________________________________________________________________________________________________

8. Did the response organization use the results of ongoing incident assessment to determine the level (Level A, B, or C) and types of protection to be provided to responders?

<table>
<thead>
<tr>
<th>YES</th>
<th>NO</th>
<th>N/A</th>
<th>N/O</th>
</tr>
</thead>
</table>

9. Did the response organization ensure that no emergency worker entered the restricted zone without the required protective equipment and clothing?

<table>
<thead>
<tr>
<th>YES</th>
<th>NO</th>
<th>N/A</th>
<th>N/O</th>
</tr>
</thead>
</table>

10. Did the response organization establish and maintain rules for the use of protective equipment by responders while in the restricted zone?

<table>
<thead>
<tr>
<th>YES</th>
<th>NO</th>
<th>N/A</th>
<th>N/O</th>
</tr>
</thead>
</table>

11. Did response personnel operate within the restricted zone under supervision of a safety officer?

<table>
<thead>
<tr>
<th>YES</th>
<th>NO</th>
<th>N/A</th>
<th>N/O</th>
</tr>
</thead>
</table>

12. Were fire fighters involved in operations beyond the initial stages of the incident/accident provided protective equipment which meets the criteria required by OSHA 29 CFR 1910.156(e)?

<table>
<thead>
<tr>
<th>YES</th>
<th>NO</th>
<th>N/A</th>
<th>N/O</th>
</tr>
</thead>
</table>

13. If appropriate equipment was available to responders, were response personnel trained in its safe and proper use?

<table>
<thead>
<tr>
<th>YES</th>
<th>NO</th>
<th>N/A</th>
<th>N/O</th>
</tr>
</thead>
</table>
OBJECTIVE 10: RESPONSE PERSONNEL SAFETY (continued)
14. Were communication links between the IC, the safety officer, and the site entry team adequate to support safe and effective response operation?

YES  NO  N/A  N/O

15. Did the safety officer have access to weather data?

YES  NO  N/A  N/O

16. By what means (status board, etc.) was equipment and manpower tracked?

___________________________________________________________________________________________
___________________________________________________________________________________________
___________________________________________________________________________________________
___________________________________________________________________________________________
___________________________________________________________________________________________

17. Did emergency responders with exposure to an actual or potential inhalation hazard wear positive pressure self-contained breathing apparatus while engaged in emergency response?

YES  NO  N/A  N/O

18. Did the IC allow emergency responders to remove equipment referred to in 12 and 17 above?

YES  NO  N/A  N/O  Time ______

19. Were operations in hazardous area performed in the “buddy system?”

YES  NO  N/A  N/O

20. Check those actions that the response organization provided to emergency workers:

_____ Emergency assistance
_____ Rescue
_____ First aid
_____ Emergency medical transportation
_____ Other (List______________________________ )
OBJECTIVE 10: RESPONSE PERSONNEL SAFETY (continued)

21. Check those actions taken upon the departure of emergency response personnel from the restricted zone:
   ______ Monitored for contamination
   ______ Decontaminated
   ______ Re-monitored
EXERCISE EVALUATION FORM

Date: ______________________
Exercise Location: ______________________________________________________
Evaluator/Controller Name: ______________________________________________

OBJECTIVE 11: TRAFFIC AND ACCESS CONTROL
Demonstrate the organizational ability and resources necessary to implement site security and to control evacuation traffic flow and access to evacuated and sheltered areas.

POINTS OF REVIEW
1. Was site security implemented at the incident/accident?
   YES    NO    N/A    N/O    Time ________

2. Who was responsible for implementing site security?
   _______________________________________________________________________
   _______________________________________________________________________
   _______________________________________________________________________
   _______________________________________________________________________
   _______________________________________________________________________
   _______________________________________________________________________
   _______________________________________________________________________
   _______________________________________________________________________
   _______________________________________________________________________

3. Were only authorized and necessary personnel allowed access to the incident/accident scene?
   YES    NO    N/A    N/O

4. Check those actions included in site security procedures:
   _____ Cordon off the area with police tape or roadblocks
   _____ Removing unauthorized vehicles and personnel to allow for easier access to the site by the response organization
   _____ Diverting all unnecessary traffic away from the area of the incident
### LSA Exercise

**OBJECTIVE 11: TRAFFIC AND ACCESS CONTROL (continued)**

5. Were traffic controllers actually deployed to designated traffic/access control points?

<table>
<thead>
<tr>
<th></th>
<th>YES</th>
<th>NO</th>
<th>N/A</th>
<th>N/O</th>
</tr>
</thead>
</table>

6. Was this deployment accomplished in a manner to facilitate traffic and access control?

<table>
<thead>
<tr>
<th></th>
<th>YES</th>
<th>NO</th>
<th>N/A</th>
<th>N/O</th>
</tr>
</thead>
</table>

7. Did the traffic/access controllers minimize delays?

<table>
<thead>
<tr>
<th></th>
<th>YES</th>
<th>NO</th>
<th>N/A</th>
<th>N/O</th>
</tr>
</thead>
</table>

8. Were the number of traffic and access control personnel and resources mobilized adequate to direct and control the evacuation traffic flow?

<table>
<thead>
<tr>
<th></th>
<th>YES</th>
<th>NO</th>
<th>N/A</th>
<th>N/O</th>
</tr>
</thead>
</table>

9. Were maps provided to local law enforcement personnel depicting the affected area and evacuation routes?

<table>
<thead>
<tr>
<th></th>
<th>YES</th>
<th>NO</th>
<th>N/A</th>
<th>N/O</th>
</tr>
</thead>
</table>

10. In the event the protective action strategy was to shelter-in-place, did the traffic controllers control the access of personnel, equipment, etc. into and from the sheltered area?

<table>
<thead>
<tr>
<th></th>
<th>YES</th>
<th>NO</th>
<th>N/A</th>
<th>N/O</th>
</tr>
</thead>
</table>

11. Did traffic/access controllers limit and prevent access to evacuated or hazardous areas?

<table>
<thead>
<tr>
<th></th>
<th>YES</th>
<th>NO</th>
<th>N/A</th>
<th>N/O</th>
</tr>
</thead>
</table>

12. Did traffic/access controllers limit access to waterways, railways, and airspace in affected area?

<table>
<thead>
<tr>
<th></th>
<th>YES</th>
<th>NO</th>
<th>N/A</th>
<th>N/O</th>
</tr>
</thead>
</table>
OBJECTIVE 11: TRAFFIC AND ACCESS CONTROL (continued)

13. Did response organizations keep the traffic access control personnel informed of significant developments in the emergency situation?

YES  NO  N/A  N/O  Time ______

14. How was this information provided to traffic and access control staff?

____________________________________________________________________________________________
____________________________________________________________________________________________

15. Check those areas in which traffic and access control personnel demonstrated accurate knowledge of their roles:

_____ Traffic control and access control
_____ Evacuation routes
_____ Destination routes
_____ Location of reception centers
_____ Any relocation, recovery, and reentry activities for which traffic and access control are pertinent
EXERCISE EVALUATION FORM

Date: ______________________
Exercise Location: ______________________________________________________
Evaluator/Controller Name: ______________________________________________

OBJECTIVE 14: EMERGENCY MEDICAL SERVICES
Demonstrate the adequacy of personnel, procedures, equipment, and vehicles for
transporting contaminated and/or injured individuals, and the adequacy of medical
personnel and facilities to support the operation.

POINTS OF REVIEW
1. Which organization(s) demonstrated this objective?

________________________________________________________________________
________________________________________________________________________
________________________________________________________________________
________________________________________________________________________
________________________________________________________________________
________________________________________________________________________
________________________________________________________________________
________________________________________________________________________

2. Did EMS personnel establish a protective zone around injured or contaminated individual(s)?

YES    NO    N/A    N/O    Time ________

3. Were the EMS personnel aware of the hazardous material involved?

YES    NO    N/A    N/O

4. If yes, describe how the material was identified and the material involved.

________________________________________________________________________
________________________________________________________________________
________________________________________________________________________
________________________________________________________________________
________________________________________________________________________
________________________________________________________________________
________________________________________________________________________
________________________________________________________________________

OBJECTIVE 14: EMERGENCY MEDICAL SERVICES (continued)

5. Did EMS personnel determine the nature and extent of the injuries?

<table>
<thead>
<tr>
<th>YES</th>
<th>NO</th>
<th>N/A</th>
<th>N/O</th>
</tr>
</thead>
</table>

6. Check those actions taken by the EMS personnel:

- [ ] Referred to an initial response resource for immediate first aid for injured patients
- [ ] Instituted emergency care using the triage concept
- [ ] In case of contact with material, immediately flushed the skin or eyes with running water for at least 15 minutes
- [ ] Removed and isolated any contaminated clothing and shoes
- [ ] Kept the patient quiet and maintained normal body temperature

7. Did the EMS personnel take steps to limit contamination to:

- [ ] Other personnel YES NO
- [ ] The vehicle YES NO
- [ ] The facility/site YES NO

8. Check those contamination control procedures used by the EMS personnel:

- [ ] Used gloves as protection against contamination
- [ ] Lined the interior and shielded the floor of the ambulance with a protective covering
- [ ] Wrapped the individual in a sealed sheet or blanket

9. After the injured individual(s) was delivered to a medical facility, were the following monitored for possible contamination?

- [ ] The ambulance crew YES NO
- [ ] The ambulance YES NO

10. Was decontamination of the EMS personnel or vehicle necessary?

<table>
<thead>
<tr>
<th>YES</th>
<th>NO</th>
<th>N/A</th>
<th>N/O</th>
</tr>
</thead>
</table>

11. If yes, describe the decontamination procedures.

___________________________________________________________________________________________
___________________________________________________________________________________________
___________________________________________________________________________________________
___________________________________________________________________________________________
___________________________________________________________________________________________
___________________________________________________________________________________________

Appendix B
OBJECTIVE 14: EMERGENCY MEDICAL SERVICES (continued)

12. Did the response organization know which ambulance services were designated to provide transportation for contaminated and/or injured persons?

<table>
<thead>
<tr>
<th>YES</th>
<th>NO</th>
<th>N/A</th>
<th>N/O</th>
</tr>
</thead>
</table>

13. Did the ambulance crew know which medical facility to transport the injured individual(s) to?

<table>
<thead>
<tr>
<th>YES</th>
<th>NO</th>
<th>N/A</th>
<th>N/O</th>
</tr>
</thead>
</table>

14. Did the ambulance crew actually drive the individual(s) to the selected medical facility?

<table>
<thead>
<tr>
<th>YES</th>
<th>NO</th>
<th>N/A</th>
<th>N/O</th>
</tr>
</thead>
</table>

15. Did the ambulance crew maintain communications with:
   - The response organization [YES NO]
   - The receiving medical facility [YES NO]

16. Did the ambulance crew communicate the following information to the receiving medical facility?
   - Information and data on the individual's physical condition including their assessment regarding internal or external contamination [YES]
   - Vital signs [YES]
   - The type of hazardous materials involved in the accident [YES]
   - Material Safety Data Sheet (MSDS) information relating to hazardous material involved, if available [YES]
   - Estimated time of arrival at the medical facility [YES]

17. Were the following medical staff present during the medical examination?
   - Physician [YES]
   - Nurse [YES]
   - Toxicologist [YES]
   - Other (List_____________________________________________________________________) [YES]
OBJECTIVE 14: EMERGENCY MEDICAL SERVICES (continued)

18. Did the receiving medical facility have written procedures for dealing with potentially contaminated individuals?

YES    NO    N/A    N/O

19. Did the medical facility have MSDS information available onsite?

YES    NO    N/A    N/O

20. Did the medical facility establish a controlled area where the injured individual(s) would be treated?

YES    NO    N/A    N/O    Time _______

21. Check those procedures implemented by the medical facility to ensure the controlled area is isolated and self-contained:

_____ All doors leading to the area remain closed
_____ Ventilation systems are filtered or independent of other systems within the medical facility
_____ Floors are covered to minimize contamination within the area
_____ Appropriate warning signs are in place
_____ Unnecessary equipment is either removed or covered
_____ Necessary equipment, including a portable soil density gauge, if applicable, is in place
_____ A buffer zone separating the controlled area from the rest of the facility is established
_____ Medical facility staff who have direct contact with contaminated individuals take the necessary precautions to avoid contact with the contamination

22. Did the medical staff monitor and assess the injured individual(s) for contamination?

YES    NO    N/A    N/O

23. If yes, describe how this was demonstrated.

__________________________________________________________________________________________
__________________________________________________________________________________________
__________________________________________________________________________________________
__________________________________________________________________________________________
__________________________________________________________________________________________
__________________________________________________________________________________________
OBJECTIVE 14: EMERGENCY MEDICAL SERVICES (continued)

24. If more than one hazardous material was involved, did the medical staff treat the patient(s) with the proper priority of the materials involved?

   YES   NO   N/A   N/O

25. Did a toxicologist analyze the sample from the injured individual(s)?

   YES   NO   N/A   N/O   Time _______

26. Were the results of the analysis transmitted to the attending medical staff?

   YES   NO   N/A   N/O   Time _______

27. Did the medical staff implement decontamination procedures for cleansing localized areas on the patient(s)?

   YES   NO   N/A   N/O

28. Were antidotes or neutralizing chemicals used?

   YES   NO   N/A   N/O

29. Describe the decontamination procedures.

   _________________________________________________________________________________________________
   _________________________________________________________________________________________________
   _________________________________________________________________________________________________
   _________________________________________________________________________________________________
   _________________________________________________________________________________________________

30. Did the medical staff contain and store any waste solutions for disposal?

   YES   NO   N/A   N/O

31. Did the medical staff maintain contamination control measures during and after treatment of the patient(s)?

   YES   NO   N/A   N/O
OBJECTIVE 14: EMERGENCY MEDICAL SERVICES (continued)

32. Did the medical staff properly dispose of any contaminated waste and clothing?

<table>
<thead>
<tr>
<th></th>
<th>YES</th>
<th>NO</th>
<th>N/A</th>
<th>N/O</th>
</tr>
</thead>
</table>

33. Did the medical staff properly decontaminate any instruments or medical paraphernalia?

<table>
<thead>
<tr>
<th></th>
<th>YES</th>
<th>NO</th>
<th>N/A</th>
<th>N/O</th>
</tr>
</thead>
</table>

34. Was the medical staff decontaminated before reentering the medical facility from the controlled area?

<table>
<thead>
<tr>
<th></th>
<th>YES</th>
<th>NO</th>
<th>N/A</th>
<th>N/O</th>
</tr>
</thead>
</table>
EXERCISE EVALUATION FORM

Date: ______________________
Exercise Location: ______________________________________________________
Evaluator/Controller Name: ______________________________________________

OBJECTIVE 15: CONTAINMENT AND CLEANUP
Demonstrate the ability to implement appropriate measures for containment, recovery, and cleanup of a released hazardous material.

POINTS OF REVIEW
1. Was the source of the release controlled?
   YES   NO   N/A   N/O

2. If yes, describe how this was accomplished.
   __________________________________________________________
   __________________________________________________________
   __________________________________________________________
   __________________________________________________________

3. Was the released material contained?
   YES   NO   N/A   N/O   Time _______

4. If yes, describe how this was accomplished.
   __________________________________________________________
   __________________________________________________________
   __________________________________________________________
   __________________________________________________________
   __________________________________________________________

5. Check those resources used to assist in containing the release:
   _____ DOT ERG
   _____ CHEMTREC/CHEMTEL
   _____ Shipper/Transporter
   _____ Other (List__________________________________________________)
OBJECTIVE 15: CONTAINMENT AND CLEANUP (continued)

6. Did the response organization assess the impact of the control/containment strategies on public health and safety and the environment?

   YES      NO      N/A      N/O

7. Did the response organization have available an up-to-date list of cleanup and disposal contractors?

   YES      NO      N/A      N/O

8. Did the response organization contact and secure cleanup and disposal contractors?

   YES      NO      N/A      N/O      Time _______

9. If yes, who made the contact?

   ______________________________________________________________________________________

10. What organization/company was contacted?

    ______________________________________________________________________________________

11. Did the response organization have available an updated list of RCRA disposal facilities?

    YES      NO      N/A      N/O

12. Did the response organization contact the appropriate State agency offices for information on State requirements for hazardous waste disposal?

    YES      NO      N/A      N/O      Time _______

13. Who made the call?

    ______________________________________________________________________________________

14. Which State agency was contacted?

    ______________________________________________________________________________________
OBJECTIVE 15: CONTAINMENT AND CLEANUP (continued)

15. Was assistance requested?

| YES | NO | N/A | N/O |

16. Did the response organization implement controlled policies and strategies on reentry for:

<table>
<thead>
<tr>
<th>YES</th>
<th>NO</th>
</tr>
</thead>
</table>

___ Emergency response personnel
___ Evacuated population
___ Other (List ____________________________________________________________)

17. Did the response organization notify the following of the reentry decision?

<table>
<thead>
<tr>
<th>YES</th>
<th>NO</th>
</tr>
</thead>
</table>

___ All appropriate response organizations
___ Those responsible for congregate care of evacuees

18. Did the response organization inform the public of the reentry decision?

| YES | NO | N/A | N/O | Time |

19. Check the information included in the messages to the public:

<table>
<thead>
<tr>
<th>YES</th>
<th>NO</th>
<th>N/A</th>
<th>N/O</th>
</tr>
</thead>
</table>

___ The safety of water
___ The safety of food
___ The general environment in the affected area

20. Did the response organization initiate traffic and access control?

| YES | NO | N/A | N/O | Time |

21. Did the response organization provide transportation assistance if necessary?

| YES | NO | N/A | N/O | Time |

22. Did the response organization implement policies on recovery?

| YES | NO | N/A | N/O | Time |

23. Did the response organization establish needs for decontamination efforts?

| YES | NO | N/A | N/O | Time |
OBJECTIVE 15: CONTAINMENT AND CLEANUP (continued)

24. Did the response organization restore vital services in the affected area?

<table>
<thead>
<tr>
<th>YES</th>
<th>NO</th>
<th>N/A</th>
<th>N/O</th>
<th>Time _______</th>
</tr>
</thead>
</table>

25. Did the response organization prioritize the use of resources necessary for such restoration?

<table>
<thead>
<tr>
<th>YES</th>
<th>NO</th>
<th>N/A</th>
<th>N/O</th>
<th>Time _______</th>
</tr>
</thead>
</table>
# LSA Exercise

## EXERCISE EVALUATION FORM

Date: ______________________  
Exercise Location: ______________________________________________________  
Evaluator/Controller Name: ______________________________________________

### OBJECTIVE 16: INCIDENT DOCUMENTATION AND INVESTIGATION

Demonstrate the ability to document a hazardous materials incident/accident and response.

### POINTS OF REVIEW

1. Was an incident/accident debriefing meeting conducted?  
   
   | YES | NO | N/A | N/O | Time _______ |

2. Who was responsible for conducting the debriefing?  
   
   ______________________________________________________________________________________________

3. List the response personnel involved in the debriefing.  
   
   ______________________________________________________________________________________________  
   ______________________________________________________________________________________________  
   ______________________________________________________________________________________________  
   ______________________________________________________________________________________________  
   ______________________________________________________________________________________________  
   ______________________________________________________________________________________________

4. Was a time-line developed at the debriefing?  
   
   | YES | NO | N/A | N/O |

5. Was an incident/accident investigation initiated?  
   
   | YES | NO | N/A | N/O |

6. Who was responsible for the investigation?  
   
   ______________________________________________________________________________________________  
   ______________________________________________________________________________________________

---

Appendix B 71
OBJECTIVE 16: INCIDENT DOCUMENTATION AND INVESTIGATION (continued)

7. Was the cause of the incident/accident determined?

YES  NO  N/A  N/O

8. Were response personnel logs and records used as part of the investigation?

YES  NO  N/A  N/O

9. Was incident/accident information from the media secured to aid in the investigation?

YES  NO  N/A  N/O

10. Was the response to the incident/accident evaluated?

YES  NO  N/A  N/O

11. If yes, describe how the response was evaluated?

________________________________________________________________________________________
________________________________________________________________________________________
________________________________________________________________________________________
________________________________________________________________________________________
________________________________________________________________________________________
________________________________________________________________________________________

12. Check recommendations that were made:
   ____ Amend the plan
   ____ Provide training to responders
   ____ Conduct additional exercises
   ____ Provide training to the public
   ____ Other (List ____________________________)

13. Were plans initiated to document the response to the incident/accident in a written report?

YES  NO  N/A  N/O
OBJECTIVE 16: INCIDENT DOCUMENTATION AND INVESTIGATION (continued)

14. Who was responsible for preparing the written report?

__________________________________________________________________________________________
__________________________________________________________________________________________
__________________________________________________________________________________________
__________________________________________________________________________________________
__________________________________________________________________________________________
__________________________________________________________________________________________
__________________________________________________________________________________________
__________________________________________________________________________________________
__________________________________________________________________________________________
__________________________________________________________________________________________
__________________________________________________________________________________________
__________________________________________________________________________________________
__________________________________________________________________________________________
__________________________________________________________________________________________
__________________________________________________________________________________________
__________________________________________________________________________________________
__________________________________________________________________________________________
__________________________________________________________________________________________

Route:
- **FROM:** LAX, Los Angeles
- **TO:** LAX, Los Angeles

Shippers:
- **FROM:** LAX, Los Angeles
- **TO:** LAX, Los Angeles

**Note:** This form is for the use of the carrier and the owner of the goods and is not negotiable. It is not intended to be a bill of lading. The carrier is responsible for all risk and liability of the goods until it is delivered to the consignee. The consignee is responsible for any damage or loss of the goods while in transit. The carrier is responsible for all costs and charges associated with the transportation of the goods. The consignee is responsible for all associated costs and charges. The carrier is responsible for all risks and liability associated with the transportation of the goods. The consignee is responsible for all associated costs and charges.
**Transportation Emergency Preparedness Program (TEPP)**

**Appendix D**

**LSA Exercise**

---

**GUIDE 162**

**Radioactive Materials (Low to Moderate Level Radiation)**

**Potential Hazards**

- **Health**
  - Radiation presents minimal risk to transport workers, emergency response personnel, and the public during transportation accidents. Packaging durability increases as potential hazard of radioactive content decreases.
  - Undamaged packages are safe. Contents of damaged packages may cause higher external radiation exposure, or both external and internal radiation exposure if contents are released.
  - Low radiation hazard when material is inside container. If material is released from package or bulk container, hazard will vary from low to moderate. Level of hazard will depend on the type and amount of radioactivity, the kind of material it is in, and/or the surfaces it is on.
  - Some material may be released from packages during accidents of moderate severity but risks to people are not great.
  - Released radioactive materials or contaminated objects usually will be visible if packaging fails.
  - Some exclusive use shipments of bulk and packaged materials will not have "Radioactive" labels. Placards, markings and shipping papers provide identification.
  - Some packages may have a "Radioactive" label and a second hazard label. The second hazard is usually greater than the radiation hazard; so follow this guide as well as the response guide for the second hazard class label.
  - Some radioactive materials cannot be detected by commonly available instruments.
  - Runoff from control of cargo fire may cause low-level pollution.

- **Fire or Explosion**
  - Some of these materials may burn, but most do not ignite readily.
  - Uranium and Thorium metal cuttings may ignite spontaneously if exposed to air (see Guide 138).
  - Nitrates are oxidizers and may ignite other combustibles (see Guide 141).

**Public Safety**

- Call Emergency Response Telephone Number on Shipping Paper first. If Shipping Paper not available or no answer, refer to appropriate telephone number listed on the inside back cover.
  - Priorities for rescue, life-saving, first aid, fire control and other hazards are higher than the priority for measuring radiation levels.
  - Radiation Authority must be notified of accident conditions. Radiation Authority is usually responsible for decisions about radiological consequences and closure of emergencies.
  - As an immediate precautionary measure, isolate spill or leak area for at least 25 meters (75 feet) in all directions. • stay upwind. • keep unauthorized personnel away.
  - Do not treat or isolate unjured persons or equipment suspected to be contaminated; delay decontamination and cleanup until instructions are received from Radiation Authority.

**Protective Clothing**

- Positive pressure self-contained breathing apparatus (SCBA) and structural firefighters' protective clothing will provide adequate protection.

**Evacuation**

- Large Spill
  - Consider initial downwind evacuation for at least 100 meters (300 feet).
- Fire
  - When a large quantity of this material is involved in a major fire, consider an initial evacuation distance of 300 meters (1000 feet) in all directions.
